I know I keep repeating myself, but it is just amazing the thing's that
crawl out from under a rock when you call a Stumper a Nazi. Sure a
lot of denial there, eh what? Love the way they "creativly edit" comments.
That's what they do on the air also. Well at least their consistant.

Hi Luke,

What you have there is a full wave rectifier. (i.e. two diodes in one
tube).

Here are the spec's.

Filament 6.3vac/1a.
Max Plate 350vdc (cap input circuit)/ 150ma output current.
Peak Inverse Voltage 1000ma (1a).
Peak Plate current 450ma

This information comes from the 1968 ARRL handbook.

Since this is a full wave circuit, your xfmr must be center taped, and
have basically double the voltage indicated above on the full secondary
winding. Without going into technical crap, a good guess would be you
will need a xfrm that puts out about 600 to 700 across the total secondary
output, AC of course. The voltage will be actually higher after it is
rectified and filtered. So DO NOT exceed 700vac maximum. 600 is probably
safer.

Pin Out is as follows:

Pin 1 Plate one (where the HV goes)
Pin 7 Plate two
Pins 4/5 Filament voltage.

Hope this helps.

Oh and get ready for some smart butt replies from my enemies here.

I would hightly recommend you check that tube out with a known good tester. Something caused the transformer to blow. While your at it check out the other tubes in the amp. And do a close look under the chasis for burnt or badly overheated components. Usually resistors. Capacitors for leakage and obvious overheating. If you need some help drop me an e-mail. BTW if the 6ca4 is bad, you can simply use two (or more) diode's to replace it. Sorry if Im being over simple here. I do not know your technical qualifications.

Dan/W4NTI

You might as well use a '340 in a TO-220 and a TO-3 can pass
transistor like the MJ2955 or 2N4398 for starters. I assume you've
got a resistor between the emitter of the PNP and its base, and
feeding from the base to the input of the regulator.

if you place a second transistor, also a PNP with a second resistor
designed to drop the necessary voltage at the desired current limit to
turn this second transistor on, with its collector connected to the
regulator input, it will then bypass the resistor which biases your
pass transistor ON, feeding the regulator the current from its
collector, the short-circuit or thermal limits in the regulator will
shut it down before you experience any damage.

If you put an SCR triggered from a zener reference at the output such
that it conducts from the input fuse to ground, that will also prevent
the undesired overvoltage. It doesn't need to be too hefty, but it
certainly needs to survive the discharge of the filter cap, on the
regulator-side of which the fuse should be located. There should also
be a resistor between the rectifier and the filter cap to protect your
diode bridge, by the way. Some people use a negative tempco
thermistor, but I would just use a 0.1-ohm resistor or so. At less
than 10 amps you won't need to worry the voltage loss/power
dissipation too much.

Rambo, at the end of the day I'm still Tim Hynde, ka8ddz and your still a gutless anon who will never have the balls to identify himself. Do you not have any status in your career? I mean WHAT is your problem dude? Is it fun or exciting to hide behind a keyboard and throw stones? Anyone can do that, it requires little or no effort.
Give me your address or P.O Box, I'll buy you a set of brass balls. You can strap them on and pretend to be a man.

What a wimp...

Tim, ka8ddz

whats wrong with opening up the hobby to
others if we do not all will go computer and all
the hold outs who say i had to will NOT have
any bands to do it on by the way i also had to in front of FCC at 641
washington st NYC
anyone knowing what i am talking about will
agree that i paid my dues but we MUST bend with wind the bands have not turned
into cb ops dispite all claims. lets just continue the
hobby and stop fighting amoung each other
.ive lisened to the hf bands and have to say
if the few continue with the antics we will all
lose
the hobby the majority of us love???????????

Exactly..... nobody is forced to learn code.... That's why we have a "No Code Tech"..... I suspect this "Code Problem" has more to do with "Ego" than anything else! If I can't have an Extra licence then nobody should! If I can't learn code then we should get rid of code! If people work hard they should be rewarded! Those people who have their General, Advanced & Extra worked for it....It was not given to them. The "Dumbing Down of Amateur Radio" would be a great mistake.

My Opinion,
Don, W6IQ

> Grandpa had nothing to do with it..... if you want an Extra, learn

19. Hams Take Hostages

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-01 00:00:00 UTC
From: TheTechTeacher@my-dejanews.com
Message-ID: <6pvknl$da7$1@nnrp1.dejanews.com>
Source record: 165900

A group of visiting amateurs from off Cape united into a loosely organized cabal of insurgents today and took hostages in the wealthy town of Chatham when they were falsely informed there was a "candy store" in town by amateurs on the 147.045 repeater.

The hams demanded immediate shipments of amateur equipment be made so that they could select from the latest ham gear, rather than confectionary delights.

In other news, this action inspired several irate golfers to do the same when they discovered that a Main Street men's haberdashery was not only out of khaki golf pants, but also out of pink oxfords.

The two groups are absolutely and unequivocally in no way whatsover related. Early reports on 147.045 incorrectly stated that the "candy store" incident was an innocent gathering of a ham self-help group that travels about New England, refamiliarizing itself with terms that hams have given alternate meanings to, such as "hi".

Haw haw, hot and bothered? don't flatter yourself Rambo. Everyone here knows what an idiot you are, you can't argue or debate, your not good enough. You can't talk about technical issues, you don't know enough. So the best you can come up with is to call me Tubby Timmy eh?

By the way lard ass, I've seen your pic too. I've got a long long way to go to catch up with you. hee hee when was the last time you had a date anyway? Your like Masa, you vent all your frustration on the rram group. Why not find yourself a nice woman somewhere, and take your mind off how much I weigh. It's a lot more fun, trust me. Haw haw, and your the one telling everyone else to get a life, ha ha now THATS funny.

Hopefully, it will not be dumbed down. Reducing the Morse code
requirement is certainly not a cause of dumbing down. That simply
eliminates a jump-through-the-hoop exercise which allowed some folk
to substitute a skill unrelated to electronic knowledge, for
electronic knowledge, thus contributing to dumbing down.

I would look at the voltage rating of the power supply filter
capacitors. Multiply this by 0.7 to convert to RMS voltage then
multiply again by 0.75 to get a safety factor. Look for a transformer
with a secondary that has about that rating either side of the secondary
center tap. These things aren't very critical.

From what I have been hearing and reading, the amateur radio exam is
getting easier and easier. I was licenced in mid 60's.

Even with easier enterance requirements, that does not stop individual
amateurs from striving to better themselves after they get on the air.

The exam is only the 'minimum enterance requirement', it is not the
'end of the learning curve'.

Certainly, it would be a "dumbing down". The fact that you think it is "a skill unrelated to electronic knowledge" has nothing to do with it.

Amateur Radio is a hobby which has several levels, like many organizations you may choose to belong to. Requiring extra effort or special skills is a part of life, so why "dumb it down" by giving "membership" to everyone equally?

There are some defunct forms of government that believed in the "commonality" of all citizens. Don't you get it? America is great because its people are challenged to do better, in everything they do. This includes the pursuit of hobbies. Those who stand out should be rewarded. I wouldn't want the anonymous "sameness" of members of certain organizations who wear hoods, for example.

I will be responsible for my failures, and expect rewards for my successes!!

> Any suggestions? Thanks in advance!

Why do you think that the transformer has failed? And if you're sure
it has, which part of it failed? There are likely to be a sufficient
number of windings on that transformer such that if any one winding
has failed (gone open circuit), you'll still be able to energise the
transformer to completely identify all the windings.

The voltages in and around the transformer and the tube are lethal
and I strongly advise you not to investigate the failure of the power
supply yourself. You need help from someone who knows a little about
electronics, and if they have a bit of gray hair and some familiarity
with tube sets, that wouldn't hurt. Your local TV repair shop may
well have just that sort of person.

Well no, not quite, countless others have riddled your posts full of holes,
it's nothing short of comical watching you try to make an argument. Your in
good company with Burt, Jimmy, and Masa most of your posts are just mud
slinging with no real point, but you already know that.

> You, on the other hand, feel compelled to respond to
> my every post.
>

No not every post, I usually ignore your mud slinging posts, they're not
usually coherent enough to reply to.
I just respond to the ones where you try to make a point about something,
like the ARRL/FCC 220MHz issue. It's fun to challenge your position and
then watch you head for the hills, never a straight answer or logical
reply. By the 2nd post you always default to the name calling or changing
the subject. Pavlov would be proud.

> You lose again, Tubby Timmy.

You no doubt feel your the 'winner' if I'm the loser. It's interesting how
many times you use that line as a close.
You've really got it down to a science, try baffling them with some
bullshit, lie a little, flatter yourself, then call the guy your replying
to a loser. Do you have a template in MS Word that you use?
I suppose if my career was as lame as yours I'd feel the need for
superiority too.
Mid-Day DJ is it?, yea, that's where the REAL money is. What have I been
thinking? I've got to quit selling these damn million dollar automotive
assembly projects and get REAL job spinning CD's, of course I have no
experience, personality or communication skills, hey wait, I could get your
job! Do you get to make free copies of the music you play? Now THAT'S what
I call a real PERK. Forget the trip to the Hanover Automation Fair each
year, I want to get in on the ground level at a place yours, free food and

drinks when your live from the "Dew Drop Inn"? Hee hee yeaaa I'm greeeeen with envy.

There is no need to do this. However, there is a need to ensure that any testing is appropriate for the privileges granted by the licence.

Sure, have Morse testing, if you want, but make sure it grants Morse rights only. Sure, restrict access to HF, if you want, but make sure the test for access deals specifically with HF issues. Sure, make the exams as hard as you like, as long as you can justify the level of the exam compared to the licence conditions.

This is appropriate testing, this is what AR needs. It doesn't need to "keep the standards", it needs to fix them up by, for a start, putting sense into the licence system.

I fail to see why stating that a licenced radio amateur is a ham is supporting asian manufacturers, but this sort of logic matches your "linguistic skills" and "great techncial knowledge".

It would seem that you are suggesting that HF users don't use asian equipment, that being restricted to 2m users. Do you _really_ believe this or is this just a xenophobic ploy to divert attention for the core issues? If you _really_ believe it, what do you use as the basis for this assertion? Do you have one?

The extra effort must be relevant. Else why not just require all
hams run a marathon before membership. Let the the extra effort
be in electronics knowledge, not an obsolete communications skill.

If all one knows about a person is his level of Morse code skill,
one can say absolutely nothing valid about his dumbness level.
Some of the dumbest hams I know are CW whizzes and because of
that, don't even realize how dumb they really are.

Source record: 165922

!!! WARNING !!!
K1MAN RADIO BROADCAST ON 3885AM/3975LSB/14.275USB

ALL RADIO ENTHUSIAST, WHETHER YOUR A HAM OPERATOR OR SHORT-WAVE RADIO LISTENER, YOU SHOULD BE ADVISED ABOUT K1MAN, GLENN BAXTER, IARN/AARA. Don't be duped by this individual. Glenn Baxter's only interest in Ham Radio is to make a profit at your expense. He uses the Ham Radio Frequencies to advertise his organization, when in reality,he wants unsuspecting people to dial into his WEB Site so he can sell you his Bill-of-Goods! Why pay Glenn Baxter when the ARRL, (American Radio Relay League) will help you for free, and is a well known, established service, known for many years!

When you get Glenn's info package, it is a classic PYRAMID SCHEME !!!! Broadcasting slamming the ARRL, defending personal issues, is not conducive to Ham Radio !!!
Glenn Baxter has been on for 10 years; Ask yourself this, what has he done for Amateur Radio?
K1MAN broadcast on the Ham Bands might sound legitimate, but don't get duped! There are many allegations about Glenn Baxter, and his organization, that warrant controversy, from him being a convicted Child Molester, to operating a Pirate Radio Station off the Coast. Glenn Baxter is using Ham Radio to fill his illusions of grandeur of having his own Radio Station, which in reality, is a garage operation. He is using a loop-hole in the FCC rules to continue on with this worthless broadcast that causes interference and dissension in the Amateur Radio Community. Talk Radio on Ham Bands, give us a break, Amateur Radio does not need this! Amateur Radio is a Hobby designed for two-way communications, not one-way. Don't let yourself get involved with this lying, ego idiot and his organization, which is designed to extort your money, and damage the reputation of Ham Radio.
ALL GLENN BAXTER HAS IS A TRANSMITTER AND A BIG MOUTH !
This is not a SMEAR campaign as Glenn Baxter claims. NEWS LETTER gets the truth about someone who is destroying our wonderful Hobby because he has a grudge against the ARRL, and anyone who does not agree with his views on how Amateur Radio should be, according to Glenn Baxter. JUST BE AWARE !
Glenn Baxter's only concern is to get your Dollar! This is a business for IARN, Just see for yourself.
AARN/AARA Does not represent the Majority of Ham Operators in the World !
SEE FOR YOURSELF, DIAL INTO HIS WEB SITE, CHECK IT OUT !
Also, Walter Cronkite, KB2GSD is not part of the IARN Organization
It has been revealed to us Glenn Baxter references Walter Cronkite when fraudulently applying for Government Grants to make his organization look good so he can extort funds for his own personal use to keep his station on the air. IARN/AARA is not financially solvent and is on the brink of Bankruptcy.

** IARN/AARA is NOT recognized by CBS, ABC, BBC, or any other Net-work affiliation **
IARN: (I)t's (A)nother (R)adio (N)utcase !!!
HOURS AHEAD, AND NOBODY CARES

After you have received our Flyer, check it out, call Glenn Baxter at (207/495-2215) and let him know your heard from News Letter. You will be amazed of the response you will receive. As a matter of fact, since you are paying for this call, ask Glenn why he does not have an 800 number. Then call Walter Cronkite, 212-975-3627, and speak with Marline Adler. Ask her about Glenn Baxter and why he promos Walter on his WEB Site and Broadcast to further his credibility of his organization, and if Walter is a part of IARN/AARA. The Cronkite camp wants Glenn to stop. When you call Glenn, ask:

1. Who is his representative in Washington, DC to lobby for AARA/IARN? Also, what is his Dun & Bradstreet rating of his organization. (Watch Glenn waffle on that one)

2. Ask how many Radio Ham Clubs uses IARN as their Club Affiliate? Where are they, and who is the President of that particular Radio Club, and what is his/her call sign?

Why doesn't he broadcast this information?

3. Which one of Glenn's Organizations is a Maine Corporation registered with the Secretary of State? Who are the Corporate Officers (besides his own family, if any)?

Ask Glenn what really happen to him at Dayton?
4. Why doesn't IARN/AARA attend major Ham Fest in New England area? (Don't buy this bullcrap he doesn't have the time). What Ham Fest overseas does he attend?

Why does Glenn pack a Gun these days?
5. How many Jump Teams does he have? Ask for a list of names of the Hundreds of personnel he can use in an International Disaster. (If you get 10 names, your lucky)
News Letter knows what really happen during Hurricane Marilyn!

6. Besides his big mouth, ask Glenn what AARA/IARN has actually done for Ham Radio?
(That should be a good one, you'll get an ear-full of bullcrap and dribble from that question)

7. Ask Glenn why he got fired from Collins Radio (Another good one, we know the truth)
(Then ask about his days at Vermont Academy and why he was considered such a nerd!)

8. Why is Chris Murdock's call, WA1HOD, have the same QTH as K1MAN? See Callbook

You will notice a cloy-babble, rhetoric, insipid reply (if any) from Glenn, and his usual crying and whining about all he is doing for Ham Radio, and

the ARRL is so evil and bad for the common Ham Operator. Of course you will get this response that he doesn't have to give names and addresses of people that represent his organization (because he has none!). ARRL list the names in the front of their QST Magazine. Any legitimate Corporation makes the Names of their Officers & Sponsors open for public scrutiny.

Just sit back and look what is going on here, Glen Baxter, K1MAN is a fraud. This Organization of his will never replace the ARRL, or even come close to representing the majority of Hams in the World. Just beware! After you talk to Glenn, if you have a Computer, check into his WEB Site, that is where the real BullCrap is. Watch your wallet!
Glenn always brags on the air it doesn't cost (and the term he uses) dues, to join IARN; however, you have to pay 10 Bucks for a stupid T-Shirt, and $35.00 a year for a full membership to listen to this worthless Broadcast. WOW, Look at me, I are an AARA Member. Go to your local Ham Fest and wearing that T-Shirt, you'll be the toast-of-the- town! Do yourself a favor, get away from this idiot, talk to other Hams, enjoy the Hobby! The ARRL may not be perfect, and not for everybody, but at least it is a creditable organization that has been the backbone of Ham Radio for a long time, and is well known!
HELP BEAUTIFY THE AIRWAVES, GET RID OF K1MAN
****
#42 THE MANCHESTER NEWS LETTER Aug 98

Newsletter Information Bulletin Service coming up in 3 minutes---------News Letter information bulletin service coming up in 2 minutes--------10 seconds---------This is News Letter, World Headquarters, reporting from Manchester, New Hampshire, man-kinds answer to get information out about our local raving lunatic, alleged Child Molester, noted pervert, general nuisance on the Ham Bands, Glenn Baxter, Chief honcho of IARN (It's Another Radio Nutcase), of a broadca$h, than any normal human being on the Planet Earth could just-care-less. So sit back, join the fun, read this edition of News Letter.....

Week of 20 April 98: As you may of noticed, good old Glenn Baxter has stopped airing the full Names, addresses, phone numbers, of his callers that call his show. I guess the Warning Flyers we send out about AARA/IARN got the supreme irritant a little upset. I guess Glenn can't deal with the truth, and has to hide his callers so News Letter won't contact them. Gee Glenn, did we upset your programming, and World conquest of dominating Ham Radio with your bullcrap? Sorry, but it won't slow us down on getting info out to the public about your stupid, insipid, organization. Your creditability is shot! Too bad, Ha, Ha, Ha! We just thought of something, I bet it takes a lot more work to edit programming tapes, screen the callers, so Glenn-baby can get the correct information out on the air. Talk about hiding behind the microphone !!!
Glenn's new format by editing personal information shows, again, IARN's level of Creditability. When you listen to these interviews, you can tell parts are being edited out. It was funny because the week of 27 April 98, Glenn was talking to a Ham from Worcester, MA and stated the majority of letters we receive are pro his broadcast. Boy, we know that's bullcrap. Here's the

drill: Caller, what's your first name and location?. Glenn Baxter is so scared that News Letter is going to let someone know the truth, he can't stand it! Hey Glenn, next time you get an anonymous call, or letter, remember, you are now doing the same thing! Your are a fake, bullcrapper, and a worthless Scumbag. You readers ask yourself this. Glenn stated his Letters & Callers are 10 to 1 pro his broadcast, if that is so, why did Glenn discontinue giving out names and address of his callers??? The next thing you will notice, Glenn will probably have the same people call, (since he doesn't have to air their names), and brag how great IARN is. Just remember you saw this first here in News Letter. To confirm all this, call up yourself, see if Glenn will air you comments!
Remember, IARN/AARA is not a talk-Radio show, and is not the first News Line broadcast service.

HOSS-TRADERS HAM FEST: Rochester, NH weekend of 9, 10 May 1998 , I was not able to attend; however, several area local Hams went, and they said it was great. This is their report: Looks like most of the AM'ers were there. There was Tim, Pete, Dale, Dale, Eric, Jim, Jim, Bill, Bill, Bill, Jeff, Mark, Chuck, Dave, Carl, John, Kenny, Ken, Steve, Warren, Mike, Chris, the regular crew. There were several AM groups. Tim arrived in style with the Cadavilac, Dales was setup with his Military Gear, and Bill was set up in his Van with his Johnson Ranger. The Deer Meat was cooking, the Beer was flowing, the Cigars were glowing, all-in-all, everyone was having a good time. Nobody had any Flyers about K1MAN, but the conversations were still going around about the supreme irritant. I was told the real story about KA1OGM and his dealings with Glenn Bastard, and got more info on other Hams in dealing with the alleged Child Molester. Everybody was still talking about the Ice Storm that hit this year and the fact Glenn Bastard did nothing, and his broadcast was still a nuisance to the AM community. Disappointing with the Equipment at Rochester, it seems these Ham Fest are getting more junk than the good-old stuff we used to see years ago. Also, the big news I heard, it did not rain at Rochester. Boy, of all the ones to miss, every time I have gone in the past, it has rained. The personal reports I heard, and was to ask: How much did Carl Drink? Who took the Picture of the AM Gang? (we want a copy). Who wore the ugliest Hat? What Car had the biggest Bug Catcher? Who Plays the best guitar music? (was Jimmy Hendrics really there?), What Clown??? Must of been fun, we'll be there in the Fall. Since I was leaving for Dayton, I could not attend Hoss Traders this Spring, excuse if this report is not accurate, all this info was second hand, but my sources are pretty accurate! Thanks guys, great job. You can check in on Steve, WB3HUZ, Web Site for further info, pictures on this, and other past Ham Fests. By the way, if you love the AM Mode, this WEB Site is great along with WA1SOV. That reminds me, whatever happen to Jerome Prestal, KA9BSD, (News Letter #22) WEB Site? He use to have a segment on Glenn until he got threatened by the supreme irritant. Its time to start surfing the WEB again and see what's going on!

(2)
DAYTON HAMVENTION: Week end of 15 May 98. What a Zoo! This Ham Fest is too big, but we had a great time and the WX was good and hot. It was definitely

not one to miss. Prices were ridiculous, food was greasy, but I'm glad we went. We stayed at the Crowne Plaza Hotel, visited Kettering Tower (great view), attended the QCWA Dinner at Alex's Restaurant, Watched the SSTV Seminar at the Ramada Inn, took in the AM Forum at the Hara Arena, and watched Ronnie Milstrap Concert. Also, Ronnie, WB4KCG, is an did a great Job as a guest speaker at the Banquet (note: Ronnie gets News Letter). If you think Glenn Bastard did good, don't be duped by his broadca$h, the guy was the laughing stock of Dayton. You can't believe the crap Glenn Baxter was pouring out, and I am truly amazed Glenn could ever show his face in public at Dayton ever again. First of all, I personally never saw Glenn, (who was the idiot manning his booth?), and many, many, people were looking for him, and I can't tell you how many ARRL members I saw went by his booth laughing at this idiot. Here is some of the scoop, what I could tell. Glenn had a lot of people go by his booth, but more than half did not agree with his organization, and people we saw later on, and questioned, thought he was a garrulous idiot, and just listened to him pontificate to be polite. Most of his literature went into the garbage. Hey Glenn, I was standing about five from a guy that was ready to punch-your-lights-out while coming out of the building! I had to laugh at the Wall Street Article concerning IARN. Also, there is a rumor going around that Walter Cronkite is suing Glenn Baxter due to Glenn using his picture on his WEB Site, is this true? Can someone confirm this, and for how much?. Hey Glenn, will CBS, AP, & BBC, or NEWSLINE get that info? We also heard another rumor there was a representative from the Cronkite camp secretly checking up on Glenn to see if he used Walters name and credentials to further IARN credibility. Also, who is the individual Ham that is sueing Glenn? Oh, many of the Vendors we had sent Flyers to were aware of the situation with IARN and Glenn Baxter. One Vendor was passing our info to people stopping by his booth. THAT WAS GREAT, Here I am the Editor, and some complete stranger hands me our flyer. Boy, did that make my day. I wanted to take pictures of the supreme irritant, but I never saw the four eyed weasel himself (was he hiding?). The ARRL had many functions going on, and I'll tell you one thing, Glenn Baxter AARA/IARN will never replace the ARRL. Oh, Oh, Another item. We were given a Letter, or Flyer, I guess it is what Glenn sends out to people that call his show, or addresses he sometimes gets, but this Flyer was a hoot. There was a Paragraph about News Letter, and Glenn telling everyone it's a Felony, and to send your copies to the FBI, Blah, Blah, Blah, and of course the same old rhetoric about how the ARRL is going out-of-business, and he will replace it in 5 years, Ha, Ha, Ha, Ha. I thought my spelling and format was basic, Glenn's (so-called) News Letter is like a first grader's weekly reader! Glenn must be using Window's Write as his word-processor, and a Radio Shack Dot Matrix printer. You know, after seeing what the ARRL can do at Dayton, comparing the nobody- nothing IARN/AARA really is, Baxter is finished. Glenn, tell us about the problems you are having with Hotel Security, are you packing these days? What is the story dealing with the Maine District Courts? Can you file anymore frivolous Law Suites? What info does the Dayton Police Department have on you, and what do the State COPS think of you in Maine? By the way, how are you and Walter getting along lately? Did you subscription to Stern Magazine expire? I saw Tim, WA1HLR , Dale, KW1I ,

and Bill wondering around, Tim, did you see Glenn and did he interview you? and how do you like your MFJ Antenna Analyzer? The place was so packed, my Mother could of been in the next booth, and I wouldn't of see her. The AM Forum had over 70 participants (very interesting). To wrap this up, Glenn Bastard made a complete fool of himself. News Letter did a great job on getting info out, and to all you Hams out there that inquired about News Letter, there is no way we accommodate everyone that wants to be on the Mailing list, so our best obtain is the INTERNET, so please pass News Letter around to all, and rest assured, we will continue to get the word out about Glenn Bastard, who I feel is going to crack-up under the strain of being the most hated Amateur Operator of all times !!! Hey Glenn, take your medication, get shock treatment, and stay home, and do the Amateur Radio Community a favor, get off the air, forget your delusion of conquering Ham Radio with you insipid ideas, get a life. You will never replace the ARRL, and once people realize you really can't do anything for Ham Radio, they will turn on you and your stupid organization. Dayton finished you! Unfortunately we did not buy anything big, but did find allot of parts while looking around in the vast bone yard. Cars were packed in like Sardines. I left Sunday afternoon to drive back to New Hampshire to be at work that following Tuesday, it was a looooong trip, but all-in-all, I had a great time. Who bought the Gates Transmitter that was there? I heard it was purchase by someone in Massachusetts? Oh Well, next time! For Pictures of Dayton Hamvention, be sure to check into K8CX Web Site, He does a great job showing Dayton Hamvention. Our thanks to the ARRL for making such a great event fun, the true spirit of Ham Radio was representative at Dayton. By next year News Letter hopes to have a booth set-up (under a different name). Glenn, watch out! We might be right next to you, please use some deodorant and mouth wash, and make yourself visible. I can't believe we never once saw you, were you there, or just had somebody represent your organization? How were you greeted at the reception booth? We know officials got our Flyers! A recent update, I just got off the internet with some of my email buddies, and they claimed they never saw Glenn Bastard at Dayton either. Man I wonder, was the supreme irritant even there? You know, we haven't heard any recorded interviews on Glenn's broadca$h either. Did something happen we don't know about? Something weird is going on at AARA/IARN ! I think Glenn knows he's finished, and is keeping a low profile.

INTERESTING CONVERSATION: While at Dayton, I ran into a person that is associated with FEMA & MEMA. He was one of the crew that was sent to Maine to help out during the big Ice Storm that hit New England back in January. He was coordinating information and communications with FEMA, as well as the Red Cross, CAP, RACES, MARS, and volunteer groups going from town to town, house to house, to assess damage. He knows of Glenn Bastard and advised us that Glenn's Group never once contacted any agency to help out, and if he did, he wasn't welcome. It seems that Glenn's bashing of several groups in the past has left a bad taste concerning his organization. It was also revealed to us that Glenn has no local help or volunteers that are willing to help out on any type of disaster representing AARA/IARN. Also, (and this was interesting), there have been a lot of Police Reports on Glenn, and problems he as had with Hams in the past. Boy, Glenn has a trail of problems for a

long time. It just goes to show you, and this confirms, Glenn's organization is nothing, and he will never be a creditable entity to represent Hams anywhere!. The funny thing about all this, and truly, we are not trying to be biased, after talking to many people, I have yet to run into someone that approves of Glenn's Broadcast. I have heard people state they would like to see the ARRL change, and it would be nice to have another organization represent Hams, but AARA/IARN will not be that entity. Glenn Bastard went about it the wrong way, too much bullcrap and arrogance! This same individual also stated he believes Glenn is dangerous, and for people to watch out if they happen to run into Glenn. He is mentally unbalanced and is on the verge of a Mental Breakdown. Man, do we ever know that !!! The guy is nuts. You know, look what is going on here. People that once knew Glenn, or even called him a friend, now believe he has gone over the edge! Hey Tim, WA1HLR, do you agree with this? When was the last time you talked to Glenn? Has he really cracked??

WHAT EVER HAPPEN to Glenn's caller of the week? News Letter issue #31, special Edition Nov 97, Glenn had stated he was going to have a caller of the week. It was also going to be News letter Wacko of the Month. Another programming fantod? Glenn can't make up his mind. I can hear it now, uhhhh, Bonnie, do I get the rubber doll, or go to the closet? How many more changes are we going to see? Glenn's programming consist mainly of News Line, ARRL, Rain Bulletins, few callers (now with no full names and address, call signs), but still the constant praising of himself and his stupid organization. Glenn keeps this constant rhetoric that the ARRL will financially go under in five years. I think he has got his brain wires crossed-up, I believe it will be AARA/IARN that will financially fail, and based on what we know here at News Letter, it won't be long. Funds are running short up there in the Fortress of Solitude !!!

NEW TACTIC FOR INFORMATION: Since Glenn has stopped giving Names & Ham Call signs of people calling his show, we are going to take another approach for getting info out. After each weeks broadcast, we are going to randomly select 10 Hams from each State, send a NEW type of Warning Flyer with the latest, or current, issue of News Letter. Some of my Staff has recommended we get AMATEUR CLUB CALL SIGNS, look them up in the latest Call Book, and Blanket each State so they will get our information package. What a great idea! As you realize, Clubs out there will pass the info along, and more & more Hams will get this info. I'm surprised I haven't thought of this in the past. This idea, along with several members putting News Letter out on an E-Mail list, has really spread the word about K1MAN, IARN/AARA. The ones we will miss targeting info will be the Shortwave Radio Listeners (because they just don't know any better), but we feel once they get involved with AARA/IARN, and get into the real world of Ham Radio, they will realize what's going on. Speaking of Ham Clubs, is there any Club out there that's uses AARA/IARN as their affiliate? Come on Glenn, since your so popular, give us (at least) one Club that represents your organization! What's the matter, are you afraid, or just a lying ego, four eyed weasel, that is nothing but a big bullcrapper??? I didn't see any Clubs for AARA at Dayton! As a matter of fact, there is not one Ham Publication that ever mentions IARN/AARA!

PAST TAPES: All this reminds me of one of the Tapes I listened to (as you past readers know, we have about 200 hours of past tapes of Glenns programming). This one tape, about 1995, the guy that called was a pro Golfer that was just getting started in Ham Radio. He was talking about 2 meters, and how important Golfing was to his career, but he was able to find time for Ham Radio, be a Golf Pro, and teach the game to young kids (get this): Then Glenn comes back with this stupid statement, I am the head of an International Radio Organization, that is much more important than playing Golf. Then a brief silence, then Glenn went on-and-on about how great he is, etc., etc., etc., and how he heads up IARN/AARA and is know all over the World (you know the drill). It's the same old stuff! Glenn could care less what you do, or what your interest are. It's just another method he can use to get on his soap box on how great he, and IARN is. I guess those days are over. Either Glenn is too afraid of News Letter, or the FCC put a stop to his method. You know, it seems to me that in one of the earlier News Letters, we advised Glenn his broadcast would not be so bad if all he did was the News Line Bulletins, and stop all this personal garbage he airs. Maybe Glenn has seen the light here, you think? Is this a first step? I'll tell you this, if Glenn could cut back on the broadcast time wise, stop these insipid analogies of the ARRL, and everyone else who disagrees with him, tell the truth, admit he has been wrong in the past, give a public apology for deceiving everybody about his organization, maybe then, Hams will forget/forgive, and can start on a fair level playing ground. Also, Glenn has to stop using Walter Cronkites promo ID, Walter has worked too long and hard to obtain the reputation he has, and Glenn knows Walter does not want him to use his name, or picture, with his organization. Come on Glenn, can you do all this? Get with the program. Nobody cares if you want to start another organization to replace the ARRL, but get real here. The ARRL will never be replaced, but there is no reason someone could not start up another group. You, will not be this person the way you are going now. You cannot cut people down and expect them to side with your views under the threat of being persecuted by you insipid dialog. Lets face it Glenn, you are AARA/IARN, nobody else, no Board of Directors, no tax exempt group, no Corporation under the Secretary of State, no lobby group in Washington DC, no hundreds of people, just you, yourself, and ego. If you died today, no one else would take your place. So why not admit this, get organized, tell the truth, and come back to the Human Race. Stop this stupid vendetta against the ARRL (because you will never win). Only an insane person would continue on the way you are doing now. We were just trying to help, but I think your too far gone !!!

50 YEARS OF CBS: Wednesday, May 20th, 1998, there was a special TV program on 50 years of programming of CBS. The interesting attribute was on Walter Cronkite, KB2GSD, and how he was the icon for CBS News. It took a career and lifetime for Walter to do what he did, and it irritates us Glenn Bastard plagiarizes this individual to further his creditability for AARA/IARN. Glenn Bastard is a pathetic individual, and a real lo-life scumbag for doing this. It is up to all of us to save the reputation of Walter Cronkite and let everybody know Walter is not part of AARA/IARN and wants nothing to do with same! It is important that all Hams write to Walter Cronkite and air their opinion about Glenn Bastard !!!

WEEK OF 25 MAY 98: Glenn started giving out names of callers. We have noticed this pattern over the years. Right before Dayton, Glenn cleans up his act. Right after Dayton, he starts back his usual insipid programming, stupid editorials, and Worthless Boring Dribble, to run his program out of time! Regardless of his tactics, News Letter will continue on to get info out. Also, we noticed this year, at Dayton Hamvention, Glen did not pre-record people, or interview anyone to replay back on his future broadcast. In the past, Glenn usually used three weeks of boring dribble recordings. Since we did not see Glenn at Dayton, it's possible he didn't show his face, or he was put in his place. Believe me, nobody we talked to at Dayton supported IARN/AARA, or even knew what his organization was. Glenn did not do well !!! Week of June 29th, Glen did nothing but News Line Broadcast and stupid promos. Hey Glen, do you get PMS?

WHINER AWARD: Goes to Kevin Rose, KA1FTW. Another Bozo that thinks he knows all about Ham Radio. Week of 6/9/98, Kevin's stupid Letter to Glenn show what an idiot this hobby produces. These people must be the biggest bunch of Nerds on the face-of-the-planet. Of course you realize who Kevin Calls. Another Whiner goes to Pete, WZ2X, again, for his insipid email to Glenn. I think Glenn, Pete, and Kevin should all move to Hawaii and get married. Then all-for-one, one-for-all, can dominate Ham Radio! Oh, and I forgot to mention W. Continelli, W2XOY, Boo whooo, Snif-snif, whaaaaaaa, the ARRL is not welcome out here in western New York. Just a bunch of mean-old men, and I am developing a trauma. Guys, get a life !!!!! If you want to help Ham Radio, Lobby with the ARRL & FCC for changes! Do any of you idiots that call Glenn actually think Glenn is going to change Ham Radio? What has Glenn done, what has he accomplished, what has he contributed to this hobby? NOTHING but a worthless, boring, broadcast that has no value to anyone but Glenn Bastard. His illusions-of-grandeur of having his own Radio Station!
Gee, look at me. My name is Glenn Bastard, God like figure to Ham Radio, aren't I cool? Please send me money so I can keep my worthless, boring, dribble to my 3 fans (wife, Chris Murdock, and his hand). W2CE, Robert Reed (week 7/6/98). This guy gives handicap Hams a bad name. I used to be a VE, and believe me, handicap Hams get a fair shake. Nobody is labeling, or attacking, handicap individuals as an inferior class of people. This guy wants something for nothing. Go buy a CB Radio and stop complaining!

WORTHLESS-BORING-DRIBBLE AWARD: Goes to Allen Hattsfield, Milton Florida. Another idiot, who is not even a Ham Operator, thinks he has all the answers. Your typical CB operator that is too stupid to pass a Ham Test, then blames it on the ARRL. Gee Glen, the test is so hard, and I can't do CW! Ham License should be like CB Radio License, there should be none! No test, just get on-the-air. The FCC needs to expand the CB 11 meter band, and I know many Hams that have turned in their license (yea right). I got to admit one thing, Glenn did not agree with this Bozo, but wasting all this air time on this nonsense is pathetic! How come after the Dayton Hamvention Glenn didn't get any recordings? I thought for sure we would be listening to a months worth of taped dribble-crap on how great Glenn did at Dayton.

ATTA-BOY AWARDS: None this quarter. Glenn is too Chicken-Sh.. to air the truth. The Hallmark of Glenn's organization is falling apart, and everyone is starting to see this. Smoking mirrors here, right?

PROMOS: I don't know about you, but I am getting sick and tired of the same ole stuff. Glenn needs to get some new promos to ID his station. The Hams he uses are the same old nerds we have listened too over the past few years. Of Course we don't consider Walter Cronkite a nerd, it amazes us he has the gall to continuously use his voice when he has been asked to stop. I think we need WA1HLR to give an ID, HiHi.

BERRY GOLDWATER, K7UGA. 5/29/98, A great Ham has passed away. I had the privilege to work Berry many years ago and was even more thrilled to receive a QSL Card from him. This was an individual that Hams can look up to and be proud of. A great testimonial to Ham Radio. It just goes to show you there are many individuals out there that truly make a difference in the world. Berry Goldwater will be missed. Lets just hope Glenn Bastard does not exploit the late Berry Goldwater for his own personal use for his stupid organization! He has already tricked Walter Cronkite, who is next? What a pathetic liar !

GIVE GLENN A TAMBOURINE AND BOX OF KLEENEX. Week of 7/13/98. Well, if there is a controversy, Glenn Bastard will be the head-honcho to led the pack of crying wackos on the march. What amazes me is, these leftist people, hams, write to AARA/IARN to gripe about problems with the ARRL instead of taking it to the source, the ARRL. WHAT CAN AARA/IARN DO??? N-O-T-H-I-N-G ! ! ! This is the proposed Voluntary Band Plan the ARRL is trying to submit to the FCC. Glenn broadcast some comments by KF7VY, Ed Mitchell, N6NB, Wayne Overbeck, & WA6VSE, Carl Stevenson. As I can understand their concern, writing to Glenn Baxter is a waste-of-time, because the FCC, and ARRL, do not take IARN/AARA seriously. Who Does??? Here is my take on this Voluntary Band Plan. Amateur Radio has changed over the last 50 years with the advances of new technology, and more Hams coming on to the spectrum. The one nice thing about this hobby is, there is something for everybody. There has to be a Band Plan because if you don't have this in-place, somebody can run HF Packet right on top of K1MAN's Broadcast on 3890KHz/AM. (Of course, we here at News Letter would not mind that); however, with all the new modes out there, we need to have a Band Plan in effect so the Side-Banders can have their slot, the AM'ers can have there slot, the APRS can have their spot, CW operators can have their slot, and so-on and so-on. A gentlemen's agreement is fine, but as you know, there is always the idiot that will run USB on the AM window, or FM simplex on a Packet window. There needs to be a band plan in-place to insure harmony on the overcrowded spectrum we already have! To all you Hams out there that think you can write to IARN/AARA to accomplish anything, direct your energy to an entity that can really make a difference. This controversy just gives Glenn another soapbox derby to further give his organization creditably when there's no creditability to begin with! The finest, Blah, Blah, Blah, (go barf!)

WEEK OF 7/20/98: We here at News Letter were impressed with KJ7FC, Beth Harris, for her outstanding ability as a young Ham on her attributes towards Ham Radio, and her thoughts about the ARRL, meeting people in the community and overseas, teaching other young people about Ham Radio. It is nice to see that someone can use this hobby for what it was intended for, and not use it as a political tool to further their own cause (like someone we know, right Glenn?). This same week, there was a piece on KC9RP, Hap Holly, about his

life and his involvement with Ham Radio. We were very moved by this, and it just goes to show you there are true individuals out there that can represent this Hobby, and show the real worth on what Ham Radio is all about. Individuals mentioned above will keep this hobby going, and it makes me proud to be a Ham Operator. Hopefully, idiots like Glenn Baxter are few and in-between!

LATE BREAKING INFO: 7/20/98. What happen to Glenn at Dayton? We have some juicy information we just received on the supreme irritant. See next addition of News Letter for info. Also, have you noticed Glenn does not give any more editorials on his programming? How come Glenn? Does this tie in on the information we just received? Why aren't you giving out callers names, etc? Why do you keep airing Walter Cronkites promo when the Cronkite camp has asked you to stop? How come you don't have any new Hams give out a promo with their callsign? Did you have an unwelcome visit? Worked anymore International Emergencies lately? Face it Glenn, Hams have got your number and know the truth !!! Also, does anyone know about 2 video tapes going around on Dayton and Rochester? We want a copy ! Also, it has just been brought to our attention, the Rochester Ham Fest is going to be seen on Channel 5, in Boston, on a local program called Chronicle. We do not have the info when this is going to be aired, or if it has already been aired at the time of this publication. One of my staff members told us they were filming.
We do know that the Dayton Hamvention was on local area News in the Dayton, Cleveland, Ohio area. Did any of our readers see this? How come Glenn Bastard didn't get on a TV News Broadcast?, Isn't AARA/IARN recognized by CBS?, Uhhhhh, Helllwoooo, my name is Glenn Bastard, I are intellergent !

HEY GLEN, We didn't bite, better luck next time. Your really an idiot if you though we would fall for that one, nice try. Oh, and by the way, we know! You know what we're talking about, you Bozo!

EDITORIAL
You know, It has been about three years now since News Letter has been on this campaign to get info out on Glenn Baxter. We have heard allot of crap from Glenn Baxter over the years, and his thrust to trash the ARRL is getting old, and the constant rhetoric about what he can do for Amateur Radio is a Joke at best. The main problem of Glenn Baxter is his Broadcast itself. Amateur Radio does not need this. Amateur Radio was designed for two-way transmissions, not one-way. Whether it is the ARRL, or K1MAN, these so-called bulletin services are not necessary on the Ham Bands. Glenn Baxter uses the argument: if it's Ham Radio related, why not transmit on the Ham Bands? This is a stupid analogy! The Ham Bands are crowded enough without some yo yo broadcasting, causing interference to people that want to use the hobby for what it was intended for. Glenn will then state: Well, the ARRL does it. That's right, the ARRL does broadcast, but for education purposes only. CW Practice, propagation reports, etc., and they don't do it 18 hours a day, and slam other organizations, makes threats to Hams, or force their way of thinking to Amateurs that have different opinions. Talk Radio, give me a break! This is total nonsense. It would be one thing if Glenn was really doing this for the betterment of Ham Radio, but he's not.

Glenn Baxter has a grudge against the ARRL and he will say, or do, anything to discredit that organization to further his own cause. Glenn also hates the AM'ers, because this particular group has been battling Glenn for the frequency space he trashes when his broadcast is on the air. His modulation is distorted, his frequency is too wide, and his switchover timer is not correct. Glenn purposely transmits on the AM Window to make the AM community mad because of all the heckling he has gotten over the years. This is not conducive to good engineering practices, and Glenn forcing his personal views, under this so called bulletin service, is not beneficial to Ham Radio, or even Ham Radio related. Comparing the ARRL to Hitler, Stalen, Communist Russia, making a Ham Operator publicly apologizing over the air, airing a bounty on a publication, is not in the best interest of this hobby and it should be stopped !!! This is a MONEY MAKING OPPORTUNITY FOR GLENN BAXTER! Just dial into Glenn's Web Site and see for yourself. He is doing the same thing the ARRL is doing, and he is a hypocrite when he says anything different!. The Hams Bands are nothing but a media to advertise his Web Site to make money! Plus, use it as a political tool to further his cause !

Glenn Baxter keeps telling everybody his survey results 10 to 1 pro his organization. This is not true, and Glenn knows this. He is using the technique like a legion. You know, if you keep repeating a statement, or rumor, one day it becomes true. This is Glenn's method on making his organization look good, when in reality, the results are probably 50 to 1 against his organization. I'll tell you this, and I mean this, in over three years I have not found even one person, or organization, that supports IARN/AARA. Most of the Hams at Dayton that showed an interest in his organization were either new Hams, or Short-wave Radio Listeners that are not familiar with the hobby. Can't you just see Glenn foam-at-the-mouth when someone ask him about his organization? Dollar signs appear in his eyeballs, and his mouth starts to tremble!. You just have to laugh when Glenn claims he gets over 400 applications per week to join his stupid organization. This guys is a sick puppy. Remember when Glenn stated he had over 140 thousand listeners as a result of an independent survey? Of course Glenn never stated who did this survey, and when.

You old time readers of News Letter have seen me say this over, and over, and over. There is know change, and I have more important things to do with my life then to wonder about the antics of a raving lunatic; i.e., Glenn Bastard. Over the next few months, we are going to make a decision whether to continue to distribute News Letter individually. The actual writing of this publication takes no time at all, but the distributing of it is long, and takes time. If it was not for my staff, I could not do this alone. We are going to seek out individuals (such as K1IV), that have extensive E-Mailing lists, and INTERNET access to get our publication out. Glenn cannot file suite on the truth, and mailing a Flyer, or publication, is not against the Law because we are not seeking any monitary funds from this. All allegations on Glenn Baxter can be backed up, and he has no legal grounds to stand on. He might cry, and whine, about how News Letter is ruining his reputation, but this is not true. Glenn's own mouth is ruining his character and his organization. Its slander when Glenn's hears anybody talk bad about himself, but its okay for him to trash ARRL, and everybody else, when they

don't conform to his way of thinking. A double-standard here. A Class individual, or organization, does not bad-mouth the other guy. Who ever said I was a class act? I don't mind getting on Glenn's level, because it exposes this idiot and his organization for what it really is! Glenn Baxter has lost many supporters, friends, and I suspect family before too long. What I am hearing from sources that know Glenn, he is on the verge of a mental collapse. His finances are stretched, and if it is a fact that Walter Cronkite is suing AARA/IARN, Glenn Baxter will be financially ruined, and his organization will be finished. I seriously doubt someone else will step in and continue on with this bullcrap! The sad thing is, Glenn could of really started something here, I think allot of people would like to see another organization like the ARRL. Competition is good; however, Glenn won't be that entity!

Anyways, we shall see. We are not too sure when the next issue of News Letter will be. I will be taking many trips this summer, and I am planning to go out and see my daughter who just moved to the San Francisco area. I have received many tips on Hams that want to put News Letter out, but I realize allot of Hams are not on the NET, and many do not even have a computer. My Staff is thinking up new ways to
get info out, and I get more volunteers every week. I think it's funny Glenn's stupid Reward did not phase anybody, because most normal people know he will never be able to pay-out (plus the fact all my Staff think what we are doing is great). Many Hams I talk too enjoy the rag. I guess the people that hate News Letter are Glenn, and the Whiner Award winners. I guess we can't please everybody. There won't be much to report on if Glenn keeps his programming the way it is (I think this is Glenn's way of fighting back). That's fine with us because it was our intention for Glenn to change his programming. News Letter accomplished a major victory doing this. I think it's great that we don't have to listen some insipid editorial by Glenn Baxter, or listen to some stupid Ham talk about his shoe-laces. It must be heart breaking
for Glenn not to be able to air the names and addresses of his callers. Now that we know he is editing all calls, his creditability is ruined. We won anyway you look at it. Whether Glenn will ever take his broadcast
off-the-air, or not, is something we will have to wait. The day K1MAN is shut down will be the biggest celebration of Hams in the World. Hopefully, one day, the FCC will step in and do same. Glenn is on the edge of Part 97-111B6, I am amazed Glenn gets away with what he does. If you ever get a chance to read these rules and regulations, read the whole chapter and tell me K1MAN is not violating FCC Regulations.
Have a good Summer for all, next publication should be in October or November. Just say NO to IARN!

IARN: (I)t&#65533;s (A)nother (R)adio (N)utcase, Hours ahead and nobody cares
!!!

YOUR LISTENING TO IT NOW, This is NEWS LETTER, signing off

HELP BEAUTIFY THE AIRWAVES..... GET RID OF K1MAN !!!!

RE: Glenn Baxter K1MAN
1 Long Point Road
Belgrade Lakes,
Maine 04918

Hi Larry.

These next few pages are my review and summary of the documents you have provided. I have tried to keep this document as short as possible.

I found many consistencies in these documents and I have tried to keep the editorializing to a minimum. Believe me when I say it is hard for me to be 'objective' under the circumstances but I have tried to be fair to the best of my abilities.

Please be aware that even though there were a small number of pages for review, this amounted to a 'major' work for me as my concentration, due to my spinal injuries, is poor.

I hope this may be of some use and I hope to have more to work with at a convenient later date.

Thank you.

Vince Werber

R E : Glenn Baxter K1MAN
1 Long Point Road
Belgrade Lakes, ME.

Review of Documents Provided via FOIA
Dated: October 20, 1986 through March 21, 1995
Review Date: April 20, 1998
by Vincent George Werber
Gardiner, Maine

This document is in the Public Domain

As many of these documents are 'dated' and could be considered of 'historic' value only, please bare with me as I try to show a 'pattern of method' in Mr. Baxter's actions. I will endeavor to keep opinions to a minimum.

*****

In the communication dated 10/20/86 from Col. D.J. Kay, USAF (ret) he states;

"... then K1MAN and the Columbia Broadcast System are in violation of the rules that prohibit commercial activity."

The keyword being 'commercial' and this will be one of the major working themes of this paper. Also to be considered will be; intimidation, intent to deceive and a gross misuse of the Federal Court System by Mr. Baxter.

*****

On 6/14/89 (FCC date 10/20/89) Mr. Baxter , in reference to the 14.313 Maritime Mobile Service Net (MMSN), states;

"... so far, your only real action was firing K1MAN! Your full cooperation with the 14.313 Service Net will be a step in the right direction. With your full cooperation, I can guarantee that order will be restored to 14.313..."

In reviewing a file tape recording I have dealing with this issue, it was Mr. Baxter that was one of the major problems with the MMSN. This recording shows, very clearly, Mr. Baxter 'taking control' of the MMSN. He assumed the position of 'Net Control' after he was 'fired' and drove the entire net 3Khz up the band causing great havoc and dissension.

*****

In a communication from Mr. Baxter to the Commission dated 3/31/87 (last paragraph) Mr. Baxter states;

"Finally, I request and need for my protection and assurance of due process in this very serious matter, a written transcript of the Kay tape. not a copy of the tape. I must have a written transcript in order to have proper opportunity to respond to your apparent allegations of Amateur Radio Station K1MAN and CBS violating FCC rules."

This is an example of how Mr. Baxter uses 'legal type demands' to delay legal procedures.

*****

In a communication to the Commission from Mr. Baxter dated 5/6/87 (last paragraph, 3rd line) Mr. Baxter states;

"I have enclosed a copy of our latest Emergency Communications Handbook for your late night reading. Also enclosed is a tape of the May 2, 1987 IARN World Wide Broadcast to all radio amateurs plus the talk show regarding

IARN and the FCC that aired on WFAU in Augusta, Maine on 16/Apr./1987."

Is Mr. Baxter trying to 'bribe' or create a situation of 'confidence' with Mr. Johnston, Chief of the Personal Radio Branch or is this meant to be sarcastic in nature?

*****

On July 6, 1987 the Commission sent Mr. Baxter an Official Notice of Violation, apparently dealing with his amplitude modulation station operation and improper identification of same. In Mr. Baxter's reply to the NOV he states;

"To prevent this from happening again, I am sending the bulletins more frequently on AM to gain practice in operating under your watchful eye."

This would be quite familiar to many hams that have criticized Mr. Baxter's operating practices in the past. Basically it amounts to, if it bothers them... give them more of the same.

*****

Also in this same document Mr. Baxter states;

"As a U.S. citizen, I am also watching you and will be examining your work (via freedom of information act) under a microscope as well."

Another example of Mr. Baxter's influence by intimidation style.

*****
In Mr. Baxter's 8/8/87 letter to Mr. Barry Bohac, E.I.C., FCC, Belfast,Me., Mr Baxter states (2nd line);

"I see now that I used the FCC Washington, D.C. address and perhaps that would cause a delay in you receiving it."

Was this an error of convenience used for stalling purposes?

*****

In a letter dated 7/8//90 Mr. Albert Heine DK7CN writes (2nd page 5th paragraph);

"... the emissions of K1MAN caused severe interruptions of the Amateur radio traffic going on between radio hams of Western Europe, many of them acting on the behalf of their national Red Cross organizations, and Soviet or Balkanese radio hams, trying to direct relief convoys to disaster stricken areas, when and where there were no other means of communications left..."

Mr. Heine goes on to say;

"... K1MAN apparently attempts to create the appearance of one or a group of people endeavoring to assist just such operations. We were extremely unhappy when this station's blind broadcastings could not be stopped while a number of ham operators speaking in their native

tongues tried to overcome the severe interference which K1MAN was causing to their relief communications."

And finally Mr. Heine states;

"How ignorant, how utterly arrogant can one behave?"

There is nothing I can add to this, Mr. Heine's letter speaks volumes and we are indeed fortunate that there wasn't an 'official' international incident created because of the operating practices of Mr. Baxter.

*****

In Mr. Baxter's letter dated 8/16/90 to Mr. R.C. McKinney, E.I.C., FCC (page 1, last paragraph) Mr. Baxter states;

"Since interference to 97.401 (b) emergency communications carries criminal penalties, you might find yourself caught up in criminal misconduct yourself, at this point, in your obvious attempts to protect KV4FZ."

In paragraph 6 page 2 of this same document Mr. Baxter goes on to say;

"When a government agency misbehaves, U.S. citizens can expose this in the free press. In this matter, we have two vehicles. This problem can be covered by K1MAN editorials, and we also have a lot of interest at this point by mass media such as CBS and 60 Minutes. After this, we have litigation and Congressional involvement."

Yet another example of Mr. Baxter's trying to influence by intimidation and threats.

*****

In a letter from Mr. K.P. Clark, UK, G4MPQ, dated 9/29/90 (page 1, paragraph 4). Mr. Clark states;

"Since these daily taped broadcasts became the norm, I have heard many operators claiming frequencies as belonging to one faction or another, from regular well known illegal phone patch groups to pirate operators operating from sail boats crusing in and around the Caribbean Islands, some quoting K1MAN as an example when challenged to justify highjacking a particular frequency."

Mr. Clark goes on to say;

"I do hope that you can help the few people throughout the United States who seem to be putting themselves in jeopardy by speaking out against these 'smart guys' who always want to make a 'fast buck' to use a well known phrase. Please help them to restore the hobby to it's former amateur status."

It is obvious by Mr. Clark's statements that Mr. Baxter's reputation for harassing and or intimidating any dissenting amateurs here in the U.S. was well known in the UK.

*****

Another letter from the UK dated 10/3/90 (page 1 paragraph 5) from Mr. K. Black States;

"We amateurs in Europe have had to endure these illegal broadcasts for five years along with the diatribe that he spews out which include personal attacks on decent amateurs and their children. This is a propaganda machine to mollify the ego of K1MAN and a sure way to get a clear frequency..."

Mr. Baxter is well known for his 'character assasination' on any hams, or others, that dare to disagree with his personal philosophy. Mr. Baxter's personal arguments with individuals should not to be considered a topic of a true Amateur radio bulletin service.

*****

Mr. Baxter's document "Request for cancellation of Notice of Apparent Liability" (FCC date 10/29/90 and Mr. Baxter's document "Request for a trial like hearing before the commission or an administrative law judge" (first reply to NAL, FCC dated 11/23/90). Entire text of both documents.

Both documents are good examples of how Mr. Baxter likes to stall or harass through instruments of law.

*****

In Mr. Baxter's letter of 1/19/91 (FCC date 1/22/91, in reference to one of the NALs) he states;

"A suit against Bohac in Federal District Court for tort liability, deformation, and obstruction of justice in this matter is in the works. Obstruction of justice in prosecution of a felony is, of course, itself a felony."

Mr. Baxter also states in the last paragraph of the same document;

"Senate Majority Leader George Mitchell, a long time friend and supporter of IARN, takes a dim view of corruption within the Federal Government,..."

Once again Mr. Baxter shows his tendency toward influence via threat and intimidation.

*****

Document (FCC date 2/5/91) from Army Mars (bottom of page) states;

"Dick, AAA1ME/W1HJP our state director can fill you in on the status of the equipment/books, etc that Baxter refuses to return."

Did Mr. Baxter ever return this equipment? And how did he reply to the allegations of stealing credit for work that was done by Army Mars members?

*****

The document 'Deposition Subpoena' (FCC date 2/19/91 and others) for Mr. B. Bohac and others in the Glenn A. Baxter vs ARRL case. Total document considered.

This is a harassment document as the need for these persons and document requested was absurd. U.S. Attorney, Richard Cohen was very correct with his movement to Quash.

*****

In a complaint filed by Andrew H. Kilpatrick dated 2/7/93 he states;

"This man (Glenn Baxter) who calls himself the '14.275 Mhz coordinator' and unilaterally declared an emergency for the country of Bermuda and requested third party traffic for AP Network news during Hurricane Dean (Bermuda never declared an emergency!)."

I this situation Mr. Baxter declares the emergency and starts his 'commercial' operations.

*****

In the transcript dated 1/5/93 (93-WA-071) it gives full details of how Mr. Baxter's IARN provided radio equipment to the Bouganville rebels who were fighting the controlling government of Papua, New Guinea.

*****

In a letter to Senator Jesse Helms dated 1/23/95 (page 2) by J.W. Morris states;

"... he file what he calls a 'Standard Felony Complaint Affidavit' form against me with his United States District Attorney, Bangor, Maine. The District Attorney sent this form to the FCC."

Does Mr. Baxter cross the line with the filing of these documents? Does this go from harassment to terrorism?

*****

The last group of documents are basically 'form' letters (dated 1994-1995). The most disturbing complaint in these documents is that Mr. Baxter insists on the continuation of his 'broadcasts' during times of declared emergency in areas of the United States. These complaints echo those from Amateurs in Europe on twenty meters.

*****
SUMMARY

In summation it is clear that Mr. Baxter's operation is not in the public interest, here or world wide.

Mr. Baxter is using the United States Court system to his own whim and is tarnishing the 'good' name of many citizens of the United States via the court.

He also will try to contain any opposition to his operation with the devices of harassment, intimidation and threats in the same manner he handles the FCC complaints.

In my opinion Mr. Baxter's operation is one of an opportunistic nature for monetary gain and self edification.

HI Lewis I would give Don Johnson W6AAQ a call 530-787-3905 he is in
Calif. He is the "father" of the screwdriver antenna. In one of his books
he shows a screwdriver DK-3 mounted horizontal in a cabinet of a motorhome.
He sells his DK-3 for $150.00 shipped in the US. I have one of his DK-3's
but have not gotten it installed but the quality is top notch. I have heard
a number of people on HF talking about using his antennas. Hope this helps

45. Amateur Radio in New Zealand

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-01 00:00:00 UTC
From: Bryan King <Bryan@k1snh.mv.com>
Message-ID: <6q0bhl$366$1@pyrite.mv.net>
Source record: 165926
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

I'm looking for some information on operation of 2 meter FM in Auckland, New Zealand. I will be visiting New Zealand on business in about a week for a two week stay. I've been to the NZART web page and have most of my questions answered. A couple of additional questions I have are:

1) Is the US General class license equivalent to the NZ General qualification?

2) Is there a list of 2 meter repeater frequencies in New Zealand online that I can download? I plan to pick up a copy of the NZART Callbook while in Auckland, but just in case I am not able to make it to the store, I'd like to get a list of frequencies that I can operate on.

Thanks in advance,

Bryan

What "license conditions" would warrant greater difficulty in the
electronic theory exam?

If it requires evidence of more brain power to operate a store-bought
rig at 440MHz than to operate a store-bought rig at 3920 KHz, then the
Tech license exam should be harder than the General.

Knowledge of operating conditions and anomolies comes with experience,
not studying material in manuals.

The need for advanced technical knowledge went away with the
availablilty of the Far East "rig of the month club", when Kenwood,
Yaesu and Icom turned amateur radio into a consumer-marketing
playground.

There is still a need to recognize greater levels of accomplishment in
the Amateur Radio art. The CW requirement certainly helps identify
those who felt the need to advance further beyond the beginner novice
stage. Since most technical advancements in communications today are
now the result of laboratory engineering, should we require a BSEE, an
MSEE and a Doctorate as evidence of higher "license conditions"??

That's how it happened to me. Once I took the 15-20 min a day to really learn it, I really enjoyed it. My radio doesn't even have a voice mode.

61. Help! Identify vacuum tube working voltage

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-01 00:00:00 UTC
From: Luke <99310289@mail.wsu.edu>
Message-ID: <01bdbd11$5c7c8500$73037986@peng.physics>
Source record: 165977

Hi, I need help to identify the working voltage of a vacuum tube. Since the HAM people maybe one of the last group in the world still using vacuum tube, I hope somebody can help me.

This tube is from an amplifier of my daughter's 20-years-old electric piano that is an antique model. It is mechanical type with a vacuum tube amplifier, not synthetic music keyboard. The power supply (transformer) out of function yesterday. The problem is, there is no any label shows the output voltage like the transformer in the market now. Since the transformer connects to the vacuum tube, if I can identify the wiring of this vacuum tube, then I can find the output of this transformer, that's the basic idea.

The brand of this tube is "Sylvania", model number "6CA4", there are 9 pins, I need to know, at least, what's the voltage that connect to pin 1, 4, 5, and 7?

Any suggestions? Thanks in advance!

Luke

I wonder if Ruthie sends cookies to Art Candell, N4PCK who still resides at the Walton Correctional Facitliy for his multiple convictions of child molestation. Remember it was N4PCK and N4LMC together that conspired to get KV4FZ off the air. It was N4PCK and N4LMC who promised the troops that they would get the job done muy pronto...eight years ago! And as the StumpJumpers say, "Herbies still here". Ruth should hang her head in shame from recruiting the physcopaths of ham radio in her infamous "struggle" against KV4FZ.

Hi,
This is just to let you know about a new Internet "Webcluster" which I'm putting the finishing touches on right now. It will be up and running early this week, hopefully by Monday afternoon. It will show you the last 30 real-time DX spots and, soon, will be fully customizable to give you just the information you want. Please drop by at http://webcluster.ml.org (after Monday) and let me know what you think.
73,
Mike

Pins 4 and 5 take 6.3V AC. Two to 4 hunderd volts are probably applied
to 1 and 7.

71. !!!!!!Wanted RCI2950,2970,2980, or 2990 in any condition

Once again I DIDN'T change my user name, you're too easy and not that
important. I *NEVER* commented on Wu Tan/Wu Tang.

> 2. You didn't know the difference between Papaw and Paw-Paw

"Did Papaw's rotten telephone QRM cause the Kung-Foo Kiddies to run off and
become skinheads? Get one of those Out The Kazoo telephone RFI filters. They
really, really work!"

The above is a copy and paste of TheLibNut's message MORON. Was your butthole
buddy (TheLibNut) talking about the fruit of a tree ? Or did he misspell the
common baby-talk word "Pawpaw"? Was it the fruit of a tree that causes that
"Rotten telephone QRM"? MORON

>
> 3. And apparently you don't know the difference between Muppet and
>Moppet.
>
> I would suggest that you get a good dictionary and start night classes.
>You don't have what it takes to get into language debates.

I'm an electronic tech, and don't profess to be a master of the english
language but from your postings here apparently you've WASTED a lot of time in
school. Maybe you should try a different major ??

At least, Muppet
>and Moppet are somewhat similar. But Papaw and Paw-Paw? Grandfathers don't

>grow on trees, M-O-R-O-N. There were moppets for hundreds of years before

Since a moppet is a small child or baby I would really expect that there WERE moppets for hundreds of years before muppets. In the case of how your butthole buddy used the word "moppet" attached by a "string" etc. I have to bet it was a misspelling of muppet. MORON

>muppets were invented, M-O-R-O-N. And the Wun Tan's couldn't sing and dance
>a lick, M-O-R-O-N
>
> Wonder why nobody wants to hire an IPS grad? This is why.

Better switch your major dickweed as after all that fancy edgemacation you get your ass beat by an electronic tech.

This trial and error method is the _worst_ possible way to learn about HF propagation. I'm amazed that anyone would suggest that every operator re-invents the operating wheel. Much better to know about, say for example, the dawn terminator _before_ you start experiencing its effects. The same applies to the use of indicies and the related prediction tools which are available and not beyond the average person's understanding.

There are excellent publications which describe the types of HF propagation that can be expected and what to expect from an operating perspective and the strategies for reducing their impact.

I gather from your comments that you believe that you can't learn anything useful about propagation and operating conditions from the books indicates that you have never been a commercial or defence HF operator when reliable contacts are important.

> The need for advanced technical knowledge went away with the
> availablilty of the Far East "rig of the month club", when Kenwood,

If you take that tack, so has the need for Morse, with the advent of modes like PACTOR. Why do Morse if there is a better mode available?

> There is still a need to recognize greater levels of accomplishment in

> those who felt the need to advance further beyond the beginner novice
> stage. Since most technical advancements in communications today are
> now the result of laboratory engineering, should we require a BSEE, an
> MSEE and a Doctorate as evidence of higher "license conditions"??

Just a guess, but I gather your interests do not lie in the technical area, because of your apparent total focus on appliance operating.

You may be interested to know that there _are_ still significant things being done the home shack by non-degreed people. In a company I worked for, this happened with a very low noise mixer (made by an Amateur) and a high power coaxial matrix switch. Sure the commercialisation was done in the company, but the design and proof of concept was done in their homes in their own time.

Many Amateurs still develop or modify their own equipment.

The thing that amuses me the most is that it appears you can only perceive recognition as being worthwhile in the areas that interest yourself.

Mark.

Oh.... What about the ARRL's brilliant idea to just give the Tech Plus & Novice their Class C (General Ticket) without first passing the Tech & General portion written test.... Do you want people who don't have a clue about operating HF with privileges to run 1500 watts on all the HF bands. I would like to know the ARRL director who thought that one up.

Cheers,
Don, W6IQ

Hey thats pretty good. Just a pack of lies, but good none the less.
Here is one for you.....

All for one and one for all.

This is the stumpers beckoning call.

Barfies, stumpers, Big Al's boys,

Playing with their expensive toys.

In reality all the same.

Playing their ignorant little game.

Lying, jamming all day long.

Day after day, same ole song.

A conversation they can not do,

Unless they are talking about me or you.

If it can help, here is a message I posted more than a year ago on
compuserve/hamnet :
```

Voici quelques modifications pour le Kenwood TH-78 que je n'ai vu nulle part. Je les essay�es sur des appareils de version am�ricaine, c'est � dire du type TH-78A, de deuxi�me g�n�ration, c'est � dire : num�ro de s�rie sup�rieur � 405xxx, et reconnaissables au fait que deux fils verts (green jumpers) sont implant�s pr�s du circuit logique o� figurent les fameuses six diodes qui configurent l'appareil.

La seule diff�rence physique entre les mod�les de type A et de type E est dans la s�rigraphie du clavier. L'�lectronique semble �tre identique � la combinaison des diodes pr�s.

Il est possible de lib�rer toutes les possibilit�s de l'appareil *sans exclusion*, contrairement � tout ce qui a �t� publi� jusqu'ici, � savoir :

- Tonalit� 1750 Hz pour activer les relais amateurs fran�ais ; - Toutes les tonalit�s CTCSS pour activer les relais amateurs d'autres pays (et certains relais professionnels) ; - Extension maximale des bandes d'�mission et r�ception.

Avec les pr�cautions de rigueur (cf les autres communications), il suffit d'effectuer les modifs suivantes :

- Couper (ou d�ssouder) le fil vert le plus bas des deux ; - En num�rotant de haut en bas de D1 � D6 les diodes de configuration, supprimer les diodes D2 et D4. Installer, s'il n'y en a pas des diodes aux positions D1, D3, D5, D6.

Le clavier est alors du type europ�en (TH-78E) m�me si on est parti d'un TH-78A.

La seule diff�rence est une permutation circulaire entre les boutons suivants :

- LAMP devient TONE ;
- CALL devient LAMP ;
- TONE devient CALL.

Le r�sultat est un appareil tr�s polyvalent utilisable non seulement en amateur, mais aussi en bande marine et en professionnel avec des shifts de 4,8 Mhz pour la VHF. Tout ceci bien s�r dans les pays o� cela serait autoris�...

Excusez la parler fran�aise, mais je ne vois pas pourquoi nos amis anglophones ne feraient pas eux aussi un petit effort.

Si ces informations pr�sentent quelque utilit�, je ne vois aucun inconv�nient
 ce qu'elles soient traduites dans la langue de Mickey.

Gotta tell you Dads' out there, the Novice Ticket makes a wonderfull father and son/daughter project. Try it. Don't get discouraged because the kids just "soak up" the code like a spong and you have to work at it. Thats just the way it is. Kids have NO problem kicking your behind on code. The theory portion will put you back on equal ground for a while. :o) A short while only though!

> General portion written test....

Well Don, tech+'s did 40% of the work required for a general class
license but they were only granted phone privileges on a dead band for years
and years. Just consider this act of grandfathering as an attempt to average
out the unfair treatment they endured for all those years.

Cross-posted to: rec.radio.amateur.misc,ne.forsale,rec.radio.amateur.equipment,rec.radio.scanner,rec.radio.shortwave

Items can be sold in part or as a package:

Yaesu FT-900 with the following accessories

- FIF-232C CAT controller

- Bencher YA-1 Low-Pass Filter

- CW filter

Yaesu FT-50RD dual-band HT

- Standard NiCAD pack

- AA pack

- Comet SMA503 tri-band SMA antenna

Non Radio Gear

- Astron RS35M Power Supply with Voltage and Current Meters

All manuals included.

Best offer.

Thanks in advance.

Items are in Boston, MA area.

Does anyone know the proper modification procedure for the VX-1R to expand the VHF-UHF transmit range and is it true/or not that the cellular can be restored ?????

Currently, there are two different modifications posted on Web sites involving this radio.
One suggests bridging one set of pads and the other suggests jumping two sets of pads.

I would appreciate any information on this modification, especially from someone who
owns this radio and has sucessfully done this modification(s). Thanks very much.

Joey

KV4FZ AND THE ENGLISH MUFFIN RECIPE
For those interested in why KV4FZ is so disliked, I offer the following historical cameo:
It was approximately 1979 when the late Bernie Mogal, J6LDZ, an American with permanent resident status on the island of St. Lucia, started the Caribbean Maritime Mobile Net on 40m. Operating on 7240 kHz, the Net became a "party line" for friendly intercommunication among hams sailing on boats in the area. It was fun; it was legal; it was helpful; it was educational (about entrance procedures and difficulties in the various islands and about getting reciprocal licences); it was GREAT. Bernie got a kick out of it too.
Until Herb - KV4FZ - decided to break it up.
FZ's harassment was so bad that the Net frequency had to be changed many times: 7230, 7240, 7255 kHz and at one time even 80m was tried for a short while. Herb and his sycophants followed the Net wherever it went, tried to "liberate the frequency" before Net time, and generally tried to disrupt things as much as possible.
Herb's accusations against Net members transcended the ridiculous: "Drug honchos love the ham bands because they remain inconspicuous amongst a sea of other communications. With simple codes such as a RECIPE FOR ENGLISH MUFFINS..." This comment was aimed directly at Bernie who had received a recipe for English muffins from a Net member, Moe Goldy, KE1N, and his wife Elayne. The recipe was simple and delicious and easy to make in the galley of a small boat. Bernie passed it on to other yachties on the Net. Lots of us heard about it. We all wanted to try the muffin recipe, and Bernie put it on the Net many times. But FZ was convinced it was all a "code" for nefarious drug activities and viciously accused Bernie of "criminality".
It all sounds so stupid now, in retrospect. But at the time it was not so funny. It is never funny to be slandered - even by a nutcase like this felon, FZ.
(More cameos to follow).....

I agree and I remember that the late senator goldwater had two fantastic
base set-ups and pushed for code to remain but when he sat at his radios
he would use modems and computer 90% of the time.
All the code/cw amateurs that want code/cw to be part of testing and
operation need to wake up as do the no code/cw amateurs code needs to go
and proper manners need to be improved, We all need to help the
manufactures to promote amateur radio and get more of the public
interested and involved in amateur radio not to increase sales but to
keep the frequencies we have and to keep amateur radio ALIVE.
Come on now people amateurs/ham's men and women and teens lets get the
band wagon going and keep our hobby/passion alive and well and we need
to police our air-ways and help the fcc to get rid of the abusers the
foul language and dead carriers the trouble makers the one's that give
amateur radio a bad name off the air.

SAVE Amateur Radio promote it work to make it grow, work to make it Live for another hundred years or longer and as for me I have been getting my children hooked on amateur radio and hope the carry it on after Im gone.

ANOTHER HISTORICAL CAMEO ABOUT THE FEARLESS FZ

And then there was the affair of Thomas E. Menzies, KA6LKU, of Los Angeles, CA.:
FZ heard this callsign being used FROM A SAILBOAT on Bernie's Net one day. The fellow calling himself KA6LKU said his name was Gene.
Herb went ballistic. "THIS GUY IS A PIRATE, A PIRATE..(etc., etc.....etc.) THE REAL KA6LKU IS NAMED THOMAS OR TOM - IF HIS NAME IS GENE HE IS ILLEGAL - AND BERNIE DOESN'T CARE - HE DOESN'T CARE - HE DOESN'T CARE...!!! PIRACY! PIRACY!"
This went on and on, and because Bernie continued to talk to Gene and to let him into the Net, Herb continued to accuse Bernie of "not caring about the rules and regulations. - The Net was just a bunch of pro-pirate - spectrum criminals, etc." ad nauseum....
Finally during one of these FZ tirades, KA6LKU broke in and very calmly announced that, if it was anybody's business (which he very much doubted), his middle initial, "E", stood for EuGENE.
Herb immediately changed the subject and denied that he had made any false accusations. Of course FZ NEVER made any appology.

Fairnes??? You are going to let people loose on the HF bands who will be allowed to run 1500 watts just to be "FAIR". That's like giving someone who failed his drivers test 10 time a drivers licnese...to be Fair. How can you "Grandfather" some a license that they never had and don't qualify to have. If the Novice & Tech Plus do not have to test for General then "NOBODY" should have to test for anything.... Make eveybod a Class A (Extra).....That's the only "Fair" thing to do... We could then call it the "Citizens Band" or CB....hi hi hi hi hi!

I've seen the baby-talk word "pawpaw" that's a reference to grandfather used in
newspapers and magazines, but _NEVER_ "papaw." I suspect those authors know the
difference between fruit and grandfather.

You lose MORON

I didn't mean "Paw Paw" like a Paw Paw tree. I didn't mean
>"papa", a diminutive for father. Substitute "Grandpa" for "Papaw" and you
>will get the correct meaning. Kinkster, you lose on that point.
But I
>wouldn't expect you to know what "Papaw" means if you live in a part of the

You "Should (have) used LEASH INSTEAD of STRING", But I lose? that's a GREAT
laugh ;-) LOL LOL !!!! That was GREAT !!!!!!

Sorry MORON but how many babies have you seen attached to STRINGS? You LOSE
MORON. Muppet MOST closely matches what you described. If you can't accurately
describe what you're talking about that's not MY problem. ;-)

My meaning was that the person
>was being restrained as is very common with children in Japan and some parts

This just brings the amateur service into line with other services regarding deregulation. A first-class license used to be required to serve as the engineer (control operator) for a broadcast station. No more. Now, anyone can sign the transmitter logs and serve as the control op for a 50,000 watt AM broadcast station. No license required. 1500 watts on the ham bands is insignificant by comparison.

I have an Icom 706 MkI and am trying to connect a headset to the radio. The headset is a Optimus Pro50-Mx, which has a dynamic element. The microphone that came with the radio has a electrete mic. I was wondering how I could interface this different type of mic to the radio. I am guessing that I would need to use a small preamp with the dynamic mic. If anybody has information that could help me, I would appreciate any help.

Thanks in Advance,

Source record: 165818

A friend and I setup a new type of On-Line Hamfest recently. It is currently free since we are still working on it. It allows you to list items for sale in a Hamfest-like enviroment.

Instead of only allowing a listing of one item or so like most on-line auctions do, we allow you to setup a table. A table can contain a bunch of different items--much more like a real hamfest. This site will be open to amateurs and non-amateurs, but we are modeling the site more for the amateur community in hopes that it will help out the hobby.

Please come and visit the site. It is all free for now. Once we finish this we will probably start to charge for listings, but we don't think it is right to charge for a system that might have bugs in it! We urge you to setup a table and start visiting the site often. The more people we can get to use this, the better the system will become. Don't forget to send us some feedback while you are there!

Hamfest-Online
http://www.hamfest-online.com/

We have worked long and hard on this site, and we hope you will find it useful. This is only a side project of ours, as we will be going off to college in the fall, we want to make sure that the system is as good as it can be before we have no time to work on it again! Let us know what you think.

Well, a similar thing did happen back in the 50's, Don, when the FCC did away with the Class A, B, C (Conditional) licenses and went to Novice, Tech, General and Advanced.

The Generals were given full phone privileges on all bands, including 75 and 20. Previously, one had to have a Class B license and a year of experience and pass a reasonably searching exam on advanced AM phone to get a Class A and be able to work phone on those bands. But, now it was all handed out on a platter.

I suppose that one could accurately comment that people who had not demonstrated competence in AM phone operation by examination and prior operating experience were suddenly given full privileges on 75 and 20.

Curious, but those bands have never been the same since, have they?

And, even more curiously, those same Generals, et al, screamed bloody murder when in 1968 Incentive Licensing came along and took away some of their CW privileges and some phone bandwidth.

The FCC giveth and the FCC taketh away, and not always as we would like.

I have an old MFJ VHF converter I am looking to get rid of.

This thing plugs on a 2m HT and allows it to receive from 154-164 MHz.
Obviously, with most of the newer radios, this isn't much use anymore,
but I will sell it cheap if some one has an old radio they could use
it on.

Send me email...

Jason, N9LEA

109. Re: JUSTIFICATION FOR CW

It seems that in the end, both sides of the code/no code debate will prove to be right. Based on statements made by the head of the FCC Private Radio section, the code will be abolished as an obstacle to the free enjoyment of radio by everyone who wants to. So the no-code camp seems to have been right on this one.

On the other hand, the same FCC official has said that she sees no need for a technical exam, either. Same reasoning, the exam is an obstacle to the free enjoyment of radio communications. So the pro-code group was right on this score: the code test was only the beginning, the theory test will go, too.

With the FCC out of the enforcement business, it is interesting to speculate on their reaction to complaints of interference to public safety, maritime, and aeronautic radio communications. I believe that we will see type-acceptance required of all radios sold for use on the new, Public Radio Service. These rigs will be channelised, and blocked from easy modification for operation on unauthorised frequencies.

Impossible? Remember that the head of the FCC is a political appointee, and she was not around during the deregulation of the CB allocation. Nor will she be around later, to catch the heat for this new stupidity. In the long(or even the short) run the error will be apparent, but we will never get the genie back into the bottle. Only those persons with an ability in CW will be able to carry on ham-like activities. Carry on, that is, if they choose to ignore the rule that will forbid the use of cw , or any other "encrypted" mode of communication.

The push for equal rights will be the end of ham radio as we know it today. Code waivers will prove to have been the writing on the wall.

August 3, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2HJB, W3UR & The Daily DX, W6KNB, W6MD, K7FL, K8YSE, 7N2PYF, BA4TB, BY5QN, DL6FBL, EA2BUF, EA4DX, EB2DJB, EU1DX, EW4EW, F5NOD, F6AJA & LNDX, G3KHZ, G4BUE & DX News Sheet, IK0HBN, SM5MX and K.U.A.R.C for the following DX information.

3D2, FIJI ISLANDS. Shozo, 7N2PYF, will be active from here as 3D2PY between August 7-9th. Activity will be mainly on 20, 17 and 15 meters SSB. Operating frequencies will be around normal DX windows or IOTA window. He will use a TS-50 with a 100 watts into a wire antenna. He mentions, "Depending on the condition, I will try another bands" on SSB and CW. QSL via home call 7N2PYF (1997 and 1998 callbook address only or via the Bureau).

3D2DX ROTUMA DXPEDITION (Update). Roberto, EA4DX, reports that the 3D2DX operation is on schedule. 3D2DX will begin August 29th from the village of Fapufa on Rotuma (OC-060). He will be there for three weeks. After Rotuma, he willl sign 3D2DX/P from Fiji (OC-016) for 4 days more. He is leaving Madrid on the 24th, and after a short stop at Phoenix, AZ, where he will meet with members of the CADXA (8Q7AA-XZ1N guys among other ops) he will then head to Rotuma. The operation will be on 160-10 meters (WARCs included) SSB/RTTY only and on the usual DX frequencies. QSL via EA4CP: Jose D�az, Doce de Octubre #4, 28009 Madrid, SPAIN or Jose D�az, PO Box 50.546, 28080 Madrid, SPAIN. Photo QSLs will be ready 2 months after the end of the operation. More details can be found at the URL: http://www.qsl.net/ea4dx/index.html

7X, ALGERIA. By the time you read this Mark, ON4WW (ex-9X4WW), will be here again and hopes to be active soon. He expects to be issued the license/callsign 7X0WW. Activity will be CW on all bands. QSL via ON5NT. ADDED NOTE: While here, he will try to obtain a Mauritania (5T) license.

9M0, SPRATLY ISLANDS. The "DX News Sheet" reports that Uwe, DJ9HX, will be active from here August 11-19th. Activity will be on 40-10 meters

with an emphasis on 12 and 10 meters. QSL via home call (he prefers the bureau).

9M6, EAST MALAYSIA. Before and after his Spratly Island activity, Uwe, DJ9HX, will be active from two IOTAs. Look for him to be on Sabah (OC-088) August 6-10th and August 26-29th. Then from August 20-25th, look for him to be on Sipadan (OC-133). Activty and QSL info is the same as his 9M0 operation (above).

AH4/WH4, MIDWAY ISLAND. Ron, WA6FGV, and Frans, K6SHJ, will be active from here now until August 6th. Activity will be on 40-10 meters CW and SSB. They will be signing AH4/WA6FGV and WH4/K6SHJ, respectively. QSL via home call.

AND NOW FOR SOMETHING DIFFERENT! (Watch-a-Contest live on Internet). Ben, DL6FBL, has informed OPDX of a unique and different way to watch a contest. His group of contesters will be using a "WebCamera" in the shack! You will be able to see DJ9MH/Hajo, DL1MFL/Markus, DL2CC/Frank, DL2ZAV/Udo, DL4NAC/Martin, DL6FBL/Ben) and some other young SWLs/computer kids from DL6FBL's QTH during Worked All Europe DX Contest CW (WAE). The show begins August 8th (0000 UTC) and ends August 9th (2400 UTC). The contest callsign will be DA0FF. Ben suggests the following:

1. Find us on the air. Try +/- 3507, 7007, 7033, 14007, 14033, 21007, 21033, 28007, 28033 kHz.
2. Get on the internet and point your browser at http://www.boc.de.
3. For live video, choose "Server push" or "Java image".
4. Watch us for a while...
5. If you are not in Europe - call in and work us. (Sorry, no EU-to-EU contacts allowed)
6. If you are online, sign "WEB" after your report (like '599 001 WEB').
7. The crew will do funny things you can watch on the web.
8. Send us an Email and tell us what you think about our crazy team. Any comments (before and after the contest) are also welcome: E-mail to: dl6fbl@boc.de.

ADDED NOTE: Ben states, "If you don't find us at once, but don't want to miss the fun: we will display our current CQ frequency on the Web."

FP, ST. PIERRE & MIQUELON. Look for the Praire DX Group to be active from here August 26th to September 1st as FP/N9ND. Activity will be CW/SSB and RTTY with operations on 80-10 meters and possibly 6 meters. QSL via N9ND.

HL0, YOUNG-HEUNG ISLAND (South Korean IOTA). The Korea University Amatuer Radio Club (K.U.A.R.C - HL0T) has announced a five day IOTA DXpedition to Young-Heung Island from August 6-10th. KUARC was founded in 1976 and now has about 80 members. About twenty members will activate IOTA AS-105 using the callsign HL0T. This is the 7th DXpedition the group has put together since 1991. Young-Heung Island is small island that is located west about 80km from Seoul City, the capital city of South Korea (ROK). This island is famous for blue sea and beatutiful beaches and many

travellers have visited this island for summer vacation. Activity will be on the following (REPORTED) suggested frequencies: 40m (7090-7095 MHz SSB), 20m (14015-14030 MHz SSB), 15m (21020-21030 MHz SSB) and 2m (145.000 MHz). QSLs can be sent to the KARL bureau or directly to the address: 1, 5-Ka, Anam-Dong, Sungbuk-Ku, Korea University Amatuer Radio Club, Seoul, 136-701, South Korea.

MEDITERRANEAN IOTA DXPEDTION. Alvaro, EA3BUF, reports that he will be activating some French IOTA's during the month of August. Look for him to sign F/EA2BUF/p from Provence-Cote d'Azur Region Group (EU-95), Hyeres Islands (EU-70) and Lerins Islands (EU-58). QSL via F8REF (Bureau) or EA2BUF (Direct).

NEW IOTA TO BE ACTIVATED! Michael, BY5QN, reports that he and others will be going Pingtan (Haitan) Island (no ref. number yet), which is located to the Southeast of China's mainland near Fujian Province. This will be the first time amateur radio transmission will be used from this island. The callsign will be BI5P. Dates were not mentioned, but stay tuned for updates.

OPDX INTERNET SUBSCRIBERS will receive an additional bulletin containing the article/message called "CY9AA - Summer 1997" by Dennis Motschenbacher. K7BV, Editor - National Contest Journal.

QSL INFO AND NEWS......
QSL ROUTE CHANGE. Active contester Andy Melanyin, UA3DPX, frequently uses AC6WE for his overseas operations. His most frequent operations have been 5B4/AC6WE and IG9/AC6WE. Please send all QSLs to Andy direct at Box 9, 141400 Himki 7, Russia. Andy is currently unable to retrieve cards sent to the AC6WE address in Oregon or the W6 bureau.

1A0KM LOG SEARCH WEB PAGE. Sante, IK0HBN, reports that his Web page has the logs for the 1994, 1995 and 1996 operations of 1A0KM. His Web page also has the 1998's operation which is continuously being updated. Check it out at: http://qsl.net/ik0hbn

XV7SW QSLS. As reported earlier, Rolf, SM5MX, has now returned to his native Sweden after wrapping up his operation as XV7SW. Upon his return, about 500 QSLs were awaiting him with requests for direct replies. Rolf reports to OPDX that "All have now been expedited". Rolf also explains that many did not understand that XV7SW and SM5MX are the very same person, hence direct cards to Rolf's SM address could not be handled until his return recently.

ED2IZA QSL Route. Rafa, EB2DJB, reports that ED2IZA, which was active from July 24-29th from Izaro Island (North Spain), has the QSL Manager of EA2URV. Cards can be sent via the bureau or direct to: URV-ABRA, P.O.Box 323, E-48080 BILBAO, SPAIN. For more info, send an E-mail to: urv@kender.es -- If possible, the logs will be available on a Web page, in September.

EW5O QSLS. This is a special callsign being used during contests in 1998 by the Gomel Radio Club (EW8WA). QSL via: P.O.Box 105,

Gomel 246050, Belarus.

Steve, W6MD, reports that he is NOT the QSL Manager for YB2PBX. Tony's QSLs can ONLY be sent direct. However, Steve is the QSL manager for the following: YB2BRW, YB1XUR (new as of 7/20/98, but has logs for all QSOs) and YC9WZJ (also, new as of 7/20/98). All can be sent DIRECT via CBA ONLY.

Steve, W6MD, is also QSL Manager for T93Y, T93Y/5B4 and T94EU. Please send DIRECT (preferred) or bureau (only shipped out once a year). He mentions that the T93Y/5B4 cards are not ready; please be patient. It will be another month or so, then direct cards will be answered first.

BI4Q QSLS. Deal, BA4TB, reports that the first 2000 cards for BI4Q (AS-135) are printed in full color. QSLs are now beginning to go out as of July 26th. Any questions, send E-mail to: jsdxc@qsl.net
BI4Q QSLs go only via BY4RSA: P.O.Box 538, Nanjing, China.

QSLS for 8P9IF (IOTA contest). Bob/G3PJT and Derek/G3KHZ, who operated 8P9IF during the IOTA contest last weekend, requests QSLs should be sent directed to Bob, G3PJT. Derek states, "Without thinking, I said to several station to QSL to me (G3KHZ)!"

NOT THE QSL MANAGER. Paul, F8PX, reports that he is NOT 6W1RE's QSL Manager. Paul has received many QSL for 6W1RE. The correct manager is 6W1QV. F8PX had returned all QSLs received to the right QSL Manager, 6W1QV, with all green stamps and IRC.

S0, WESTERN SAHARA. The "DX News Sheet" reports that Mark, ON4WW, hopes to return here again sometime after August 3rd, as S07WW, when he goes back to 7X. QSL via ON5NT.

SPECIAL EVENT. Special event stations EU200A, EV200M and EW200M will be active from now until December 31st. The station will be on the air to celebrate the 200th anniversary/birthday of Adam Mitskewich. QSL Managers are as follows:
EU200A - EU4AA, Pavel Anatsky, P.O. Box 67, Lida 231300, Belarus
EV200M - EW4EW, Nikolaj Boltach, P.O. Box 99, Lida 231300, Belarus
EW200M - EW4MM, Kazimir Kopachel, P.O. Box 88, Lida 231300, Belarus.

TT, CHAD. Jim, WA4KKY, is reportedly back in Chad. If he becomes active again look for TT8JWM. This could be the last time you hear him. He is scheduled to leave August 7th or 8th. Activity will be SSB and RTTY with operations on mostly 20, 17 and 15 meters. QSL via N4RXL.

USI Alert. Hank, K2HJB, reports that he will be active from Montauk Point, Long Island, NY (NA-026) and Block Island, RI (NA-031) during August 17, 18, 19 and 20th. He will be around 14260 kHz (20 meters only). QSL via K2HJB or KB2PFP.

YL DXPEDITION/GATHERING. A group of YLs from 14 different countries will be active as JW0YL from the Svalbard Polar YL's 1998 gathering August 20-24th. They will be active on all bands.

AEROTRON RECEIVER NEEDED

I am in need of an Aerotron 60BR1 Mpac VHF Base Station
Receiver, 132-174 Mhz to use as a test fixture and back up
receiver for two of our local repeaters. I would like to have
the complete receiver but I would settle for the receiver case
with the master interconnect assembly.

You can email me at omega@worldnet.att.net or you call me toll free at
1-888-798-7373
week days or collect in the evenings at 1-919-231-2829.

Thanks.

The new ARRL proposal is all about money, $$$ that is! With the financial problems that recently plagued ARRL with no growth in membership, its $$ come from advertising. With the Internet and more discretionary dollars being spent on computers than on radio equipment, and add in the Asian money crisis, the ARRL knows it needs to keep the dealers and manufacturers' QST advertising dollars to survive.

So let all those Tech Plus and Novices enjoy full HF priviledges (at least those afforded Generals today) and look at all those new HF rigs that will be sold!

It's easy folks, it has nothing to do with CW, which is the last hurdle most hams manage to clear.

Now, thats a earfull! Have you ever tried contacting the fcc to get rid of illegal op's? If you have you will know that it doesn't work. If we hear a illegal station, would would you suggest we do? We have had problems on the local repeaters here and have called the fcc until we are purple in the face and little gets done. After about 5 years of bugging them, they finally showed up. They got after one guy that a local had nabbed live and in color sitting in his car. Not a whole lot really happened, and all the worst offenders remain trashing the repeaters. What would you suggest we do about foul language if the fcc refuses to file because of first ammendmant rights? Dead carriers? I outcarrier them... I've found the fcc to be fairly useless as far as enforcement. Not their fault, they don't have the funds /man/woman power. I can think of a real good way to get the goofballs off the radio, but it pretty much entails me beating the crap out of them. Then, I will probably be the one in legal trouble. I can tell by your statements you don't have too much experiance dealing with the fcc. Also no way to self police if we can't make a legal radio citizens arrest. In other words, we can't do it with the present system. MK

Sounds good to me. That's the best incentive ever. However, a digital voice/data mode with variable bandwidth and baudrate will obsolete everything else (just as soon as I have time to invent it. :-)

When the digital voice error rate gets too high, it seamlessly reverts to keyboard data encoding/decoding and automatically (or not) goes back to digital voice as conditions improve.

greetings
I am looking for an electrician who might be able to give me some
advice.
I live in a house that was build around 1950. 2 wire, no third wire
ground and 4 fuses.
I am trying to come up with a 'trick of the trade' way of determining
which outlet connects to which fuse without having to pull the various
fuses and listenning for the radio, on that particular outlet' to stop
playing.
Any thoughts?

I believe it's time for all Hams who want to preserve the original tennants of Amateur Radio, to demonstrate their contempt for that blatant opportunist, W5YI. CQ magazine has become a rag that allows Freddy to promote NCI and his money making enterprises, while ignoring any counterpoint. I urge all subscribers to cancel immediately -- and tell the CQ rag-editors why you are doing so.

Thanks, MD - it works great. I've also added the entries

/thelibnet@my-dejanews.com/f:j
/burt1@infamous.com/f:j
/the_kool_ruler@my-dejanews.com/f:j
/raulbloodworth@my-dejanews.com/f:j

The lock-outs, with their odd logic, will yell "censorship" and
"discrimination" but this compares more to adding a PL tone
requirement to what once was an open rptr with lots of QRM and
jamming; suddenly, only old friends are heard - the garbage is
gone. The big difference is that unlike a tone-access rptr,
this kill file can't be breached.

To those who also wish to join this "moderated" version of .misc,
add the directory /News/rec/radio/amateur/misc/KILL and append
/pattern/f:j to kill off what ever pattern (such as an address)
you desire.

It looks like nobody including the ARRL can agree on a licensing restructure.....Maybe we should have a 5 or 10 year moratorium on issuing Amateur Radio Licenses???? That way the FCC can save some money for congress without screwing up the Ham bands. That will work for me.... d8->

Note that "f:j" only junks articles with 'pattern' in the From-line,
while "a:j" junks articles if 'pattern' appears *anywhere* in such
articles. Thus, with "a:j" you won't be bothered with follow-ups done
to any of the ruff-raff.

removed from equipment, antenna & policy

I'll continue to buy CQ at the stands when I see a construction article of interest. W5YI appears to be a company that provides study material as well as providing assistance with license applications. I would hope that he is indeed making money as this is a key element to running a successful business. Should you choose to download study material for free from the ARRL website, or get your own license application handled free through the FCC that is your prerogative. Why are you at odds with this mans company? and what counterpoint is CQ not allowing?

Not quite. Particularly between the ages of 6-11, children have the
ability to acquire languages and communications methods at rates
far exceeding those of adults. Making the assertion that a "negative
mindset" is the culprit may be emotionally satisfying if you have a
pro-Morse test agenda to promote, but ignores a lot of physiological mechanisms
behind how people learn.

Its amazing how we always want to lower our standards so that people can join the ranks. Why don't we just do away with things like algebra or english lit. in our schools, that way everyone could get their degree. I mean I have really never had much use for the 3 years of algebra that I took. My current career doesn't make use of it. English lit., well, that speaks for itself. The fact is that people just don't want to work at anything these days. They want it all for the minimum amount of effort. Sure you say the manufactures need more people to feed their market, or people with dyslexia are handicapped, but 20 years ago this wasn't even a big issue. Frankly, excuses are like asshole, everybody has one! We gave an inch with the no code and now they want a mile! I urge everyone to speak up, not only to the ARRL, but to your congressmen and senators. We worked hard for our HF privileges and now we are letting them slip away to anyone who wants them.

We welcome new people to the hobby, it is the only way to keep it alive. We understand the process of learning code can be intimidating but it is not impossible for anyone. Some of you guys wanting to drop the code should be ashamed of yourselves! What kind of example are we setting for or children when we present an example that lowering standards is okay to accommodate slow learners. Being a slow learner doesn't mean someone can't learn it just means it may take 2 weeks instead of 1 to learn the code. Should we do the same for our academic standards in our high schools and universities?

If we loose it then we are all to blame. The OT's that let it slip away, and the newcomers that worked to take it away.

Years ago, I paid $3000 for a 4.7MHz PC with only floppy drives. My friend just paid $1000 for a 200MHz Pentium PC laptop with 2G hard drive and CD ROM drive. Should I be jealous of him? Times change. Why should he pay as much as I did. Your HF privileges are not "slipping away" anymore than my PC above slipped away when my friend bought a better machine for less. Do you feel the same way about people who win the lottery? You don't have any less money even though they got something for almost nothing.

> We welcome new people to the hobby, ...

After they jump through the hazing hoops.

I have a Kenwood TS 50S transceiver that is approximately 4 years old and I have a problem with it. The radio will receive fine, however when I transmit people say I sound distorted like I'm off frequency or overmodulated. Does anyone that has this rig know what may be causing this and what I can do to correct it? What about the overall quality of the TS 50? Anyone that can help me out, please send me an e-mail. Thanks a bunch for the help.

A boycott is a measure of last resort. Especially as a measure to silence speech you disagree with, boycotts are a form of blackmail that frequently backfire on the protesters (Remeber the flap over the TV show "Married with Children"?). Try a letter to the editor.

Make sure you don't have rf feeding back to the rig. Also make sure your power connections are good. A big voltage drop will cause the rig to fm. More-n-likely rf though. Check the antenna. About 85% of rf in the shack problems start due to antenna problems. The ts50 is a pretty good rig overall.

Maybe you should be afraid. It's not wise to make anonymous people mad. Many of us who used to be up front with our ID's have had problems. You may get subscriptions to embarrassing magazines coming to your house to which you didn't subscribe. You may get threatening snail mail. You may get email bombed. Or worse. It's hard to fight back against this type of thing so if you read anonymous posts that are reasonable then consider them and give reasonable answers. If not ignore them. Further I think most of us who post here are hams, but of course a license is not required on the net, which probably has a lot to do with why ham radio has come to what it is today.

> can you "Grandfather" some a license that they never had and don't
> qualify to have.

Becasuse with the stroke of a pen, they are now qualified. Are you
trying to say a tech+ plus isn't "qualified" to be on HF? Exactly what
kind of magical deeds does one need to perform today in order to get a
General class license that makes them qualified to "talk" on HF.

The "incentive" in incentive licensing is simply moving away from code
and toward written testing. A long time overdue.

Some FCC Rules You Should Know About4

2. THIRD PARTY TRAFFIC FROM BOATS AND SHIPS IS LEGAL EVEN WHEN ALTERNATIVE RADIO SERVICES (SUCH AS HIGH SEAS MARINE TELEPHONE) ARE AVAILABLE. Such traffic can include, BUT IS NOT RESTRICTED TO, the making of appointments and ordering food.
"On July 15, 1993, by Report and Order, the FCC relaxed the scope of permissable communications in the amateur service (PR Docket 92-136). The amendment allows licensees to use amateur service frequencies to facilitate events such as races and parades, to support educational activities, to provide personal communications such as making appointments and ordering food, to collect data for the National Weather Service, and to provide assistance voluntarily EVEN WHERE THERE ARE OTHER AUTHORIZED RADIO SERVICES AVAILABLE.
Now if you do not want to participate in this kind of activity, DON'T. But, it is legal, Herbie, IT IS ABSOLUTELY LEGAL. We know you don't like it. But TOUGH CHEESE!

153. Re: kv4fz and the truth

Newsgroup: rec.radio.amateur.misc

Message-ID: <35C64678.4A46@ecs.umass.edu>
Source record: 165590

Some FCC Rules Everyone Should Know About:

1. LEGAL THIRD PARTY TRAFFIC CAN ALWAYS BE DELIVERED VIA PHONE PATCH
"Section 97.115 of the Commissions rules, 47 C.F.R. $97.115, permits an amateur station to transmit messages for third parties to any station within the jurisdiction of the United States or to any station within the jurisdiction of a foreign government whose administration has made the necessary arrangements with the United States..... The rules do not restrict the methods that amateur stations may use to communicate the message to a third party. Thus communicating messages to a third party through the use of a phone patch is not prohibited."

This is from a letter (9/29/92) to Mr. Lloyd S. Montcalm, BARFie, from Robert H. McNamara, Chief, Special Services Division, FCC.
KV4FZ and others have CONTINUOUSLY poured out their hatred of PHONE PATCHING!!!!
Well, Herb, you may not like phone patches, rainy days, and/or Mondays. Too bad! Get over it! They are all legal!
Stealing furniture isn't, but phone patching IS!!!!!

Some FCC Rules You Should Know About

4. AMATEUR RADIO STATIONS ARE NEVER REQUIRED TO IDENTIFY THEIR LOCATION NOR ARE THEY REQUIRED TO ANNOUNCE THAT THEY ARE "MARITIME MOBILE" OR "MARITIME PORTABLE". The use of these suffixes is strictly optional. Net controls may ASK a station's location - but there is no FCC rule that he give it.
"...there is no valid reason to require the suffix 'maritime mobile', Region I, II, or III' to a station's identification for amateur radio staions aboard U.S. vessels in international waters. Essentially, such a requirement previously was contained in Section 97.87 of our rules. It was deleted by a Report and Order in Docket 20686, adopted October 13, 1976 (41 FR 47450; October 29, 1976).... Compliance with the present station identificatioon rule, which requires that an amateur radio station transmit its call sign at the end of each communication and every ten minutes or less during a communication, is sufficient as an enforcement tool without the addition of cumbersome suffixes."
The above is taken verbatim from a letter (12/20/83) to Herbert L. Schoenbohm from Robert S. Foosaner, Chief, Private Radio Bureau, FCC.
We know you don't like it Herb. We KNOW you do not approve. GET OVER IT!!!!

Has it escaped your notice that the ARRL proposal *still* requires Morse
for HF? The privileges gained for a given Morse speed ability would
change, but the requirement for Morse is still there. That's consistent
with the January 1997 decision you quoted and the stated survey results
that show that members favor "retention of Morse code for HF operating
privileges as an international treaty obligation."

Note that the text does *not* say that the survey shows that the
membership favors no change to the license structure. And the reason it
doesn't say that is because that's not what the survey showed! In fact,
over 60% of the members responding to the survey favored granting full
HF privileges at a Morse speed of "10-13 wpm" or less. (The full details
can be found in the February 1997 QST article starting on page 54.)

CQ is not very likely to bring back Scratchi! I remember him back in the
30's where he started in "Radio" magazine, the pre-war forerunner of CQ.
Scratchi was a CW operator!! Hamfisti Scratchi was his full name.

I am planning on sailing to south pacific for live-long dx pedition.
I do not plan on comming back. Instead I want to do like Danny Greene
did in the 50's and 60's on his yacht "Yasmi".

Am I correct in thinking that Hams might want to fly out to where I am
and crew on the next let....and of course operate /MM and at the next dx
spot?

Any suggestions as to which spots to 'put on the air ' first.

Ahoy -- Good Ship Menage-A-Troi
Avast ye DX Lubbers, and where might ye be sailing fer??
Skull Island sez ye, shiver me timbers buts thats the home of
K1NG Kï¿½NG and he don't low no Dxpeditions there.
Better plan on Fantasy Isle -- dey got Da Plane Da Plane!!
Or one might furl the scuppers and head for
Tabacco Spit next to Mary Cay

Avoid Grief Reef sez I
A good CW spot might be QueEss Cay
But Avoid Pay Atoll and Bootlegger's Strait, however
But Have a Bon Voyagee Maties sez I.

Me thinks your post is akin to Troll Atoll, Maties

Unfortunatly, that happens to a lot of cruisin' hams..... But
most of them WERE planning on coming back....

>Am I correct in thinking that Hams might want to fly out to where I am
>and crew on the next let....and of course operate /MM and at the next dx
>spot?

I doubt it. But I'm sure you could find some cruzers that want to
go along. Check the inter island net on 14.315 at 0800z daily, I
think you'll find somebody to go along for the ride. When you get to
the DX spot, please don't operate /MM. Put your feet on the beach.
If you operate /MM you'll become famous like Don Miller, not like
Lloyd and Iris.

>Any suggestions as to which spots to 'put on the air ' first.

Yes, I'd recommend P5. I think that would probably be very popular with
everyone you speak to on the radio. Don't forget to enlist a QSL manager
before you go, and take along an Inmarsat terminal so you can email
back the logs. Have a nice trip.

The handbook is certainly a worthy refernce (I have mine on CD-ROM). There are a number of good introductory books and study guides for those starting off. Check out http://marconi.mpce.mq.edu.au/wia/bookshop.html for a list of titles available from the Wireless Institute of Australia (NSW).

Good luck with geting your licence!

Oh NO!! The FCC and the ARRL should be trying to drive them OUT of
business, right Don?

Just wondering why you think this will have such an enormous effect. Are
people prevented from buying these radios now? Is there some kind of law
that says you can't buy an HF rig if you haven't got an amateur radio
license with HF privileges?

The proposed changes will not affect the entry level license class of
Technician, so I wouldn't expect any significant increase in the number of
new licenses. The changes only affect those who already hold amateur
licenses, and those looking to upgrade from Tech+ and above.

>Many if not most of these companies advertise in QST magazine
>(owned by the ARRL). The ARRL through QST would stand to make a lot of
>money. Isn't this a conflict of interest?

I bought all my first rigs used. The guys I bought from were the ones
getting to buy new ones. The financial benefit of the proposed changes,
if any, would seem to apply to more than just the manufacturers and
publishers.

> Two Meter FM equipment, can we.

Do you mean the same equipment manufacturers that make most of the HF
equipment? :-)

If you are looking for the "real" reason that I said what I said, you
will have to look a little deeper. IMHO, we can all have our views (and
say) as various licensing requirement issues come up before the FCC.
But, once all is said and done, it is the FCC who determines who must
meet what qualifications. Under the rules of Part 97, all those who
meet those qualifications are "real hams," and under the rules of common
courtesy, should be treated with respect.

IMHO, it is important that we remain one community, sharing the common
bond of our love of radio. If we lose that bond with each other, we
have lost the most important part of Amateur Radio.

Tim Hynde wrote:

> 2.) Require VE's or other acredited organization to provide at least 2hrs
> of training on how to operate properly, seems we've lost that part of
> training new amateurs.

This is probably not workable. In the first place, we do need to be careful on how much we start "requiring" of VEs. These fine folks are volunteers who are willing to conduct tests, but may be reluctant to have the requirement that they conduct extensive, individual training foist upon them.

Second, although one can certainly learn how to operate a few modes in an hour or two, two hours wouldn't be enough to have comprehensive training on all the operating modes that a new ham may want to use.

I also don't think that the problem is really one of training. Many people enter Amateur Radio through local clubs. Those clubs usually offer training classes and/or Elmering that can help the newcomer learn the ropes of operating a station. Most people use one or more study guides and the majority of them offer some guidance on basic operating techniques.

Most people who enter Amateur Radio do listen first, to learn the ropes by example, then get on the air and do the best they can. A few don't, however, and get on the air and commit various operating faux pas, most of which I can live with and most of which will disappear in time.

The worst of the offenders don't misbehave out of ignorance, they misbehave out of malice. No amount of training will cure these folks.

All factors considered, I think we are much better off to handle the operating training issue informally, rather than by regulatory requirement.

Hey,

Isn't $340 Grand Theft? If not, it's certainly fraud. And if it was a
Postal MO, that's even worse -- about $10,000 fine and 10 years in
jail. I'd report it to the FBI.

Ha. Since when do they run the continent ? Especially when it's easier to get a QSL from darkest Africa than from out of the postal change drawer of one of those cheapskates up there.

Do us a favor and don't send your tourists onto the New England roads next year either, eh ?

193. ARRL Spin Doctors

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-03 00:00:00 UTC
From: TheTechTeacher@my-dejanews.com
Message-ID: <6q53m8tch1@nnrp1.dejanews.com>
Source record: 165691

ARRL can look forward to a declining financial portfolio with or without this restructuring.

Do you think that the same hams who won't exert the "effort" needed to pass these shrink wrapped exams will then say, "oh I will now do my part and join my League, by golly" ?

The spin doctors enter in when we all review the responses that the ARRL spews, which always come from the same two people: Jon Bloom, Ed Hare and no others. And these are always originated from ARRL. I have yet to see any replies on their own time. Who are these people kidding other than themselves ?

ARRL is as stupid as the Congress which thinks that by listening, regurgitating in public and then doing what it wants the will of the people will be met (those of us who aren't brain dead- an ever declining number).

** Replace "gateheap" with "g8eap" to respond by E-Mail**

BURY RADIO SOCIETY - DIARY DATES 1998

The Bury Radio Society is pleased to announce its Programme for the remainder of 1998 as follows:-

11th August - Vehicle Outing with Radios (Watch this Space for Details.)

6th September - Amateur Radio and Computing Fair at Castle Armoury

8th September - "Inter Club Quiz" (Details to be announced)

13th October - "Construction Competition" (Multi Section)

10th November - "Surplus Equipment Sale" (Biggest Ever!)

8th December - "Annual General Meeting"

Bury Radio Society meets every Tuesday Evening at the Mosses Centre, near the Town Centre of Bury, where it has its own Rooms for Lectures and other Society Activities such as 'On Air' Nights etc. On Evenings when there is no Lecture or other Organised Activity there is an Informal Gathering from about 7.45 pm onwards so why not come along and meet the Members. Visitors and Prospective Members of all Ages will be most welcome.

The Mosses Centre is located near the Town Centre, adjacent to Angouleme Way and just a few minutes from Junction 2 of the M66 Motorway. There is a large Public Car Park next to the Centre and there is reasonable Access for the Disabled. The Entrance is on Edward Street, just off Cecil Street.

The Licenced Bar at the Centre is set in a comfortable Lounge Area and is open from 7.30 pm to 10.30 pm and has a wide range of Alcoholic and Soft Drinks at reasonable Prices.

** Replace "gateheap" with "g8eap" to respond **

Bury Radio Society is pleased to announce that they will be holding their ever popular Amateur Radio and Computing Fair for 1998 at the Castle Armoury in Bury on Sunday, the 6th September, 1998.

The Castle Armoury, known locally as the Drill Hall, is the same Venue as Last Year and is just round the corner from the Venue (the Castle Leisure Centre) used for a number of years previously. It is in Castle Street, just near the Parish Church and the Two Tubs Pub in the Town Centre of Bury, in easy reach of the Bus/Metrolink Interchange and Junction 2 of the M66 Motorway, from where it will be signposted. Talk In will be on Channel S22 (145.550 MHz FM) in the Two Metre Amateur Band. There will be ample Car Parking available near to the Castle Armoury on the Day, look out for the Stewards.

The Doors open at 10.30 am, half an hour earlier for Disabled Persons. There will be a multitude of Stalls and Exhibits covering all Aspects of the Hobby of Amateur Radio as well as Computing. There will be a Bring and Buy Area and a Prize Draw also.

There will be ample Seating Areas within the Hall so that Visitors may rest between going round the Stalls and Exhibits and to provide an opportunity to meet up with and chat with Old Friends. There will be Hot and Cold Food and a Licensed Bar available also.

For those Members of the Family not interested in either Amateur Radio or Computing, the Town Centre of Bury has many Attractions including the Castle Leisure Centre, which has many Sporting Facilities as well as two Swimming Pools, and the East Lancashire Railway, which often has Steam Trains running at Weekend as well as many interesting Exhibits, both these Attractions being less than two minutes walk from the Castle Armoury.

This year's Bury Radio Society Annual Amateur Radio and Computing Fair will be bigger and better than ever and certainly not to be missed.

Potential Exhibitors should write to Alan Moore, Exhibitions Manager, Bury Radio Society, c/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB without delay as there are only a few

Stalls still available.

The Bury Radio Society meets every Tuesday Evening at the Mosses Centre in Cecil Street, Bury, commencing at 7.45 pm and Everyone is welcome. The Mosses Centre is in the Town Centre just across the Car Park from the Dual Carriageway (Angouleme Way). Ring 0161 761 2079 during Office Hours for Directions to the Mosses Centre.

73 es cu on the 6th de Keith G8EAP and G0WQD

Hey everyone I just came up with a way to clean out all the hate mail here.

Let's start up individual little groups, i.e. "Let's Ding Dan group", or maybe "I love Herby group", or "I hate Herby group", or "Porkbutt is my hero group", or "Marty is a two faced asshole group", or "James Obrien mental ward group". Boy this could really go on forever. What say guys and girl's ?? Think about it, it will clean out this group and get all these clown's out of everyone's hair.....course then you will all be bitching about nothing to read.

Dan/W4NTI

Jim,

Are you then saying it is "ethical" for the ARRL to ecourage FCC policy
making that would increase their profits and the profits of radio
manufactures.... I thought the ARRL was supposed to be for the benefit
of Amateur Radio Operators... mainly the "Members" of the ARRL. The
majority of who have told the ARRL there should be no changes to the
"code" requirements. Not radio manufactures. Sounds like a "conflict"
to me?????

Source record: 165702

When I visited Martinique on my sailboat, reciprocal licenses were obtainable in those days (1983) without writing to Paris. At Fort-de-France M. Dalle and M. Boucle were only too happy to give me a hand-written reciprocal license. When I asked them what callsign I should use within the territorial waters of Martinique, M. Boucle answered tersely, "The callsign I have written on your reciprocal license, of course." I looked down at the paper he had just given me. In a large hand he had written K1IDF/MM.
Herb first denied that I had ever obtained a reciprocal license. He claimed I "just didn't care". He then repeatedly charged that, anyway, K1IDF/MM was an improper/illegal callsign. He also claimed that M. Dalle was not empowered to issue reciprocal licenses.
Well, OK. But then how do we explain the following?
While I was talking to M. Boucle, I happened to mention FZ's name. "Schoenbohm? SCHOENBOHM?", he yelled at me. He then shoved a telegram toward me and asked, since I was an American, if I could explain it. It read as follows (misspellings included):
MR DALE
RADIO COMMUNICATION MARTINIQUE
TELEX/97261-CEDEX
TF713879
FORDEFRANCE

A U.S. CITIZEN ONE BERNARD MOGAL MAY PLAN TO OBTAIN A
RADIO PERMIT THIS WEEK STOP IT IS IMPORTANT TO NOTE THAT HE
IS NOT IN POSSESION OF ANY VALID RADIO LICENSE FROM THIS
COUNTRY STOP THE AUTHORITIES IN STLUCIA HAVE ADVISE THAT
HE CANNOT UTILIZE HIS VISITOR PERMIT OUTSIDE OF THAT
COUNTRY FOR ANY PURPOSE REGARDS
H SCHOENBOHM
COL CKD
I explained to M. Boucle about the judge/jury/executioner mentality of FZ and what I thought of him. Bernie Mogal was a PERMANENT RESIDENT of St Lucia and, as such, had a regular St Lucian license, J6LDZ, not a "visitor's permit". Boucle said that I should not worry - the US was not the only country with crazy people who wrongly stuck their noses in other people's affairs. If Bernie had applied for a Martinique recip (which he didn't), one would have been issued to him.
Note the inconsistencies: According to FZ - when I got a recip from M. Dalle he was not empowered to issue it; but FZ thought enough of M Dalle's empowerment to ask him not to issue a license to Bernie.

I simply don't buy the argument that these policy changes are motivated by economics in the amateur radio market. I don't see the big economic boom. But even if there were an economic side effect, it don't see any harm in it. I can easily see how we all might benefit from it.

>I thought the ARRL was supposed to be for the benefit
>of Amateur Radio Operators... mainly the "Members" of the ARRL.

The ARRL is one of the organizations I belong to, I support them, I believe they are working in support of causes I believe in, and I want to see them thrive and survive. Yet I can find no alterior motives in their actions. I am not perplexed by the actions of either the Board or of the FCC, and I do not need to look for secret conspiracies in order to understand what is going on here.

>The
>majority of who have told the ARRL there should be no changes to the
>"code" requirements. Not radio manufactures. Sounds like a "conflict"
>to me?????

Your recollection of the poll results is different than mine. I recall no such mandate that "no changes" should be made to the code requirements. I recall nothing that supported continuing the 20 WPM exam. Furthermore I would like to suggest that until evidence to the contrary has been produced, the only connection between the ARRL proposal and the influence of radio manufacturers is idle speculation.

What planet did you take your license on?? I had to prove
sending and receiving proficiency to get mine. (Understand
the sending part is gone, but since when do they issue licenses
without a test for copying cw?)

>Of the multitude of possibilities of operations, why is Morse code singled

Justification to work CW? We don' need no steenking justification to work CW! Dis is America man! I work qrp cw if I want to, an I work 1kw cw if I want to, I work cw somewhere in the middle of all that if I want to too! It's America man!! Some of us are more equal than others. The less equal can't learn cw!

I love being MORE EQUAL than THEM!

Sorry for jumping in without seeing all of Cecil's post (just too
damn many on these threads to keep up). I think what Cecil must be
saying is that "CW operations" per se are not really tested to
any degree. That is, what do various prosigns mean, how do you
run over the exchange, give a signal report, etc. I don't think
I agree with that, since if you were honestly trying to pass
the current CW test a lot of it wouldn't make sense if you didn't
know some of these things.

Anyway, CommQuart, you may not have looked at the current CW
test judging by your comment above. It is much watered-down from
when you took it, only requiring you answer 7/10 multiple-guess
questions correctly based on what was sent (or 1 minute solid
copy, but guess how often that happens). Though they give you
a blank page to copy onto there is no requirement that you
actually write anything down if you got the 7/10 correct.

That usually translates to 4-5 wpm LESS in operating ability
on the air. Get used to working "generals" at 7.026 going 3 wpm.

Hate to burst your bubble, but we could care less. If you feel the dollar
amount is sufficient to take legal action, get an attorney and go file the
papers. Otherwise, take your lumps like a man and move on. Frankly, if you're
foolish enough to send a check to a stranger several states away on the hopes
you MIGHT get what you have assumed to purchase, you deserve to be taken to the
cleaners. Next time you'll know better, won't you?

Morse code "Sending and receiving proficiency" is not a CW
operating test. It is a big step from memorizing Morse code
characters to operating proficiently on the air with CW.

>didn't subscribe. You may get threatening snail mail. You may get email
>bombed. Or worse.

Most of the above either cost the perpetrator which means they
won't do it, or it is illegal and not very difficult to prosecute which
also means they probably won't do it. If you can't ID yourself in
a free society, it is no longer a free society.

>It's hard to fight back against this type of thing

Nonsense. Please explain which part of the above is hard to
fight back against?

>so if
>you read anonymous posts that are reasonable then consider them and give
>reasonable answers. If not ignore them.

Usually I make it a practice to ignore anonymous posts except to
point out that anonymous posters have as much credibility as
whale dung.

>Further I think most of us who post
>here are hams, but of course a license is not required on the net, which
>probably has a lot to do with why ham radio has come to what it is today.

Say what? What does not having a license on the net have to do with
what ham radio has become? For that matter, what *has* ham radio
become in your anonymous position?

>Certainly, it would be a "dumbing down". The fact that you think it is
>"a skill unrelated to electronic knowledge" has nothing to do with it.

True if it was simply a matter of Cecil thinking it. On the other
hand, when he states a truism, whether you agree with him
or not doesn't change the truism. Morse Code has no
measurable correlation to electronic knowledge, contrary to
the whines of Vince and others.

>Amateur Radio is a hobby which has several levels, like many
>organizations you may choose to belong to. Requiring extra effort or
>special skills is a part of life, so why "dumb it down" by giving
>"membership" to everyone equally?

Care to cite the cases where government privileges are
awarded based upon unrelated skills other than amateur
radio licenses?

If you want to have "effort" rewarded, there are already a
plethora of outlets for your tender ego.

>There are some defunct forms of government that believed in the
>"commonality" of all citizens. Don't you get it? America is great
>because its people are challenged to do better, in everything they do.

Do the initials BS mean anything to you? Those other forms of
government tried to enforce commonality. That is entirely
different than allowing commonality or individuality. Our form
of government is based upon individual freedoms and a
central government that exists to protect the rights of the individual.
People are allowed to rise to their level of competence without
the interferement of the government.

>This includes the pursuit of hobbies. Those who stand out should be
>rewarded. I wouldn't want the anonymous "sameness" of members of
>certain organizations who wear hoods, for example.

Well you would perhaps fit in better in that organization than others.
That organization is about imposing their personal views of
individual worth upon others. Sounds like something you want
our government to do.

>I will be responsible for my failures, and expect rewards for my
>successes!!

Sounds good to me, just don't ask the government to be the
one handing out rewards or deciding what your failures are.
That is the responsibility of private enterprise in our system,
not the responsibility of our federal government.

My question was is it ethical for the ARRL to be involved in a possible conflict of interest. I said nothing of conspiracy.

> I simply don't buy the argument that these policy changes are motivated by
> economics
> I do not need to look for secret conspiracies in order to
> understand what is going on here.

> Your recollection of the poll results is different than mine. I recall no
> such mandate that "no changes" should be made to the code requirements.

Here ya go!

The ARRL Board of Directors met in annual session, January 17 and 18, 1997, at Albuquerque, New Mexico. Here is a summary of the meeting highlights:

Responding to survey results that show that the majority of members favor retention of Morse code for HF operating privileges as an international treaty obligation, the Board decided that the ARRL will not support changing the existing treaty requirement--an issue on the WRC-99 agenda. The Board also accepted other committee recommendations regarding the international rules that govern the amateur and amateur-satellite services.

The stumpjumpers usually just stand on a stump to facilitate mating with some big brown eyed bovines. They Jump the Stump when they finally nail the _Cutest_ one in the herd, hence the name Stumpjumpers. It's somewhat akin to making it with the lead cheerleader in other circles.

I fail to see how having to learn code is a hazing ritual. It's only 26 letters and ten numbers. And the numbers are in order to make it easier to remember. Having someone stick their tongue on my antenna while I transmitted would be a hazing ritual. A no -code ham lacks the expertise to work a cw contact. Not the end of the world maybe ,but kinda limited. Also may have a little trouble with cw id'ers. MK

238. which book

Newsgroup: rec.radio.amateur.misc

I want to learn how to tune two way radio's!

"Don't laugh........"

I have a very basic knowledge of electronics and am looking for a book that
will teach me how to it!

"You still laughing?"

In the book will be what equipment is needed, how you do it etc.....

can anyone recommend a good book? I'd appreciated it.

Thanks Phil.......

P.s Wouldn't mine getting my ham licence.....

I understand. I suppose it must be due to a 50-50 mixture of poor
manners and desperation. If you'd been calling another European country,
I think you'd have had similar calls from G stations. At least by making
an unambiguous call you've not contributed to any confusion, and I can't
see how anyone could criticise you without it showing that they think
that you doing your hobby must be for THEIR benefit. Perhaps they'd have
been happier if you'd just called CQ DX and left them guessing what
calls you would answer?

Thanks,
David GM4ZNX

Cecil amateur radio is not all electronics. Part of it is also operating
skill and cw is one of them. Look at it this way, you have an operating part
(CW) and an electronics/rules and regs. Looks like ham radio to me!

RENEW AMATEUR LICENSE AFFIRMED

(WT DOCKET 95-11)

The Commission has upheld the Supplement Initial Decision of Administrative Law Judge Edward Luton which denied the application of Herbert L. Schoenbohm to renew his amateur licenses.

The ALJ found that Schoenbohm engaged in misrepresentation and lacked candor in his testimony concerning his felony telephone toll fraud conviction and a designated issue regarding solicitation of ex-parte presentations. Schoenbohm was convicted for fraudently using a counterfeit access device to obtain long distance telephone service. The Commission found his behavior, in combination with the fraud conviction, justified non-renewal of Schoenbohm's licenses.

Action by the Commission June 29, 1998, by Decision (FCC 98-139).
Chairman Kennard, Commissioners Ness, Furchtgott-Roth, Powell and Tristani.

-FCC-

And this is an exemplary amateur operator.?. His vercity is lacking, he enjoys hurting other people by calling them names and he continues to interfer, where he is not wanted...

Save your money

Your right. First time I posted here with my name and E-Mail I got so much
spam in my box that I had to go to another system.

Hello tnx for reading this message....

Just checked the Ham radio outlet page, and the sell the TS-570D
for only 1049$. If you're travelling to "ON"-land please
consider to hand-carry one for me, I'm very intrested because in our
country it's almost 1500$ for the same rig.
if intrested we can talk about rules of payment...
tnx in advance

I got a better idea. Why don't we boycott the ARRL. W5YI does a good
job. Those assholes in newington are USELESS. Their they sit,
collecting the BIG buck saleries from their members. sense
deregulation the FCC has even said that the ARRL does not have
the ear, of the commission. Free yourself from the ARRL party line.

Just my opinion

Bob

I subscribe to "CQ" and most certainly DO NOT support a boycott. However, I DO wonder about the presence of W5YI on the masthead of a magazine in which he hawks his wares. (You know, "journalistic integrity" and all that jazz). Years ago, Peter Norton was a columnist for on of the PC rags whilst also marketting products. To their credit, the magazine eventually let Norton go, to pursue his primary bidness. Maybe "CQ" should do likewise.

Just a thought.

It's the "CB-ing" of amateur radio to coin a word. As a lot of Ex-CB'ers have
migrated to amateur radio they've brought their particular lingo/jargon with
them. The one I really like is " Uhhhhhhhhhhhhhh you're hittin me with about 7
pound" ..... I'm afraid there's not much you can do other than grin and bear
it.

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis E. LeMay (K0GRL, W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the

tremendous influence that amateurs, including those within TAPR (Tucson Amateur Packet Radio), have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship.

The term Elmer has probably been in use since at least the 1950's (I'm told, but haven't yet confirmed, that it appears in British amateur radio publications from that period). The name Elmer was likely chosen because Elmers are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two. The first U.S. reference to Elmer in print was from Rod Newkirk, W9BRD, in his "How's DX" column in QST from the early-to-mid-1970's.

Such Elmers have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies. Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

How do I become an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers may register via my formatted, on-line, World-Wide Web Registration Form:

http://www.novia.net/~pschleck/elmers/register.html

I would prefer that you register using the above form (which not only ensures that nothing is omitted, but also makes adding your entry much easier by automatically converting it to HTML). However, volunteers who are not yet on the Web are also quite welcome, and may register by writing me at elmers-request@novia.net with their name, amateur radio callsign(s) (if any), E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages, FTP archives, mail servers, or mailing lists, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt.

Also, an unfortunate increase in the amount of unsolicited junk-mail that I receive (often dozens of messages _every day_) has forced me to become much more ruthless about filtering incoming E-mail. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not only not get reviewed for some time, my incoming mail filter (procmail) may even bounce it back to the sender if it can't be automatically categorized as originating from known, friendly senders or have known, welcome keywords in the headers (Elmer is obviously one of those keywords).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(_Note:_ Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with Subjects like _"Amateur Radio: Elmers Resource Directory Part */*[*-*]"_ (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news

sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news@localhost" or "usenet@localhost") if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://jupiter.sun.csd.unb.ca/
* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject/part1
send usenet/news.answers/radio/ham-radio/elmers/index/subject/part2
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24
hours (the mail-server uses batch priority to reduce system demand).

Acknowledgements

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

Amateur Radio: Elmers Resource Directory

More information about this list can be found in the companion posting
to this file, "Amateur Radio: Elmers List Info and Administrivia."

73, Paul, K3FU

- A -

John Ackermann N8UR

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 Baud one now.

My World-Wide Web Page above has a reasonable set of resources for
digital networking, including HTML versions of some of my work, sample
configuration files for Linux AX.25, and some Linux software tools, as
well as the Ohio IP address coordination info.

I've just finished writing a book on TCP/IP that TAPR will publish
(hopefully) by the end of the year. It'll be called _Networking
Without Wires_ and is a completely rewritten, and greatly expanded,
version of the old _IntroNOS_ document I wrote several years ago. In
the meantime, I've made the old _IntroNOS_ available in HTML format on

my World-Wide Web Page above.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a
result, the TAPR net-sig mailing list was born, and is now ready for
operation.

This list is <not> intended to replace any of the existing
packet-related mailing lists. Its purpose is provide a medium for
communications among those interested in packet radio networking, both
dealing with technical issues and political/regulatory ones. We'll
discuss things like how the potential 219MHz band will fit into the
networking picture, how to link areas using different networking
schemes, how to set network parameters, etc. The list's charter will
be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by
sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further
details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.71.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org
IP numbers in Ohio to:

ipaddr@febo.com

which is a mailing list read by a team of coordinators.

[_Editor's note:_ All ampr.org coordinators are listed in the document

David Andrews ZL2SX

andrews@clear.net.nz

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

Jeff Angus WA6FWI

jangus@skyld.grendel.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there. SCO UNIX, Win95 networking information available.

ampr.org IP Coordinator for California - Los Angeles County (44.16.xxx.xxx)

Hardware, software and wetware questions answered either with correct answers or the name of someone who does know.

I work small contests and do a little bit of DXing on 17 and 10 meters. I set up our club's Field Day activities last year. I do a lot of computer work on IBM/compatibles and a lot of Internet work. I used to do a lot of digital work, including running a BBS and node, but am no longer involved in packet. I am in the process of building a 440 MHz repeater and am the programmer of the KE4ZIM repeater controller. I really enjoy working with youth in general.

NEWS, INFO, RUMORS, DXPEDITIONS, IOTA ACTIVITIES and more

DX CALENDAR, WABA AWARD (rules & scores) now available

in English Version and Italian Version

Same server of the IK4LZH site for QSL MANAGERS.

I am an IOTA chaser, I work DX and I join contests. Actually I'm in love with RS sats and DOVE telemetry. I'm the Shortwave Listening (SWL) coordinator of the Italian Amateur Radio Association and I have a regular SWL page in their official magazine Radio Rivista. Recently I joined the 425 gang that produces the 425 DX News bulletin. I translate it into English and send it to many DXers via E-mail. I also maintain a WWW page to provide the bulletins graphically with previous numbers and more to come. I've been an SWL since 1974 when I received a receiver as gift from my parents. Now I'm 36 and I'm running also a free BBS devoted to HAM/SWL.

American Radio Relay League | Justice is being allowed to do whatever
225 Main St. | I like. Injustice is whatever prevents
Newington, CT 06111 USA | my doing so. -- Samuel Johnson

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of
ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams,
carrying ARRL news, details on upcoming hamfests, conventions and
Amateur Radio examinations, the ARRL Publications catalog, information
of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich,
WY1Z, and the other Boston Amateur Radio Club volunteers who've worked
since December 1994 to keep ARRL up and coming on the Web via the ARRL
home page they installed and maintained at oak.oakland.edu. Their
volunteerism helped show us that upgrading our Internet connection to
a level that allowed on-campus Web service would be essential to
ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger
and better are _essential_ to its ongoing success, so please drop by
and say hello!

I have been in ham radio for 15 years and played and worked on many modes and radios.

My home page above is a Link page I mostly use to find what I am looking for.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[_Editor's Note_: Fixes have recently been made to the FTP software at this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for

web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

I have been with Linux since it was first available. I have been a keen homebrewer for over 30 years, but I don't do much now due to lack of time. I have built lots of HF gear, including synthesized gear, and also a lot of test gear. I have also homebrewed magnetic loops, which is great fun. I have put together PC's and help other people with Linux issues. On packet, I run TCP/IP using LNET which is WAMPES-adapted for the UK by Darryl, G7LED.

During the school year, I am in Baltimore trying to set up a college
ARC at University of Maryland, Baltimore County. During the winter and
summer, I am in New Jersey. I am active in ARES/RACES/NTS and local
clubs in both areas, and would be glad to help other young people get
into the hobby of Amateur Radio, particularly in the interests of
Public Service and Disaster Management.

I'm the 425 DX News Mailing List maintainer. Further info at:

http://www.fr.flashnet.it/cgi-bin/425dxnews-list

I'm the webmaster for:

http://www.fr.flashnet.it

(maybe soon www.saiu.it) and the FTP owner of:

ftp://ftp.fr.flashnet.it/

There's a /pub/ham directory there. There's not much at the moment but
you may use it if you want. Just send new software under /incoming
including a file which tells what kind of software it is.

Expertise includes anything related to the Internet.

I used to work HF, mostly CW and QRP.

I also love Linux but never used it for ham radio, except for a
satellite tracking software :)

ARES

Team Leader, W5YI VEC

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
P.O. Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

PGH SATERN - Primary repeater system for Salvation Army

Maintainer of Link Communication List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/link.html

Only present users of Link Communication Products are welcome to join the list server. If you need information on Link Communications Products, contact them directly. Presently there are aprox 325 Members on the list server.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying
to restrict the list to only ACC users (control people) and owners.
The list is also supported by the new owner of all the rights to ACC,
Link Communications. I am also running the Link repeater controller
list server. It has approximately 90 members at this time. The way to
join the list server is to send me a short E-mail and tell me what
equipment you are using. (Note: I have no ties to Link Communications
or ACC. I started the Link list first and found how useful it is. I
had a lot of requests to start the ACC list and did it.)

I've been an active Linux advocate since it first appeared on the Internet. I was looking for an operating system that would better meet the needs of my interest in Amateur Radio and provide me with an environment in which I could actively experiment and develop. Linux provides that and I've been promoting its use within Amateur Radio ever since.

I'm an early contributing member of the Linux Documentation Project, and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney (Australia) University of
Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

I am a practicing electronics engineer (for over 35 years) with expertise in solving problems in the design of linear circuits, audio signal processors, low frequency (DC to 10 MHz), low noise, field effect devices, power supplies, batteries, and similar analog situations. I'd be glad to assist others in the solution of their electronic problems in these and tangential areas. I started in ham radio as a kid in the 50's, vacuum tubes, motor generators, and most everything related to WWII surplus equipment. Was a design engineer at Texas Instruments for several years in the heyday of discrete devices and linear integrated circuits, mostly for military and surveillance use. My present concentration is toward digital telephonic communications. Have now gotten pretty familiar with use of the Internet. I guess it goes without emphasis that my capability goes beyond the areas I listed as being most competent, but I could be a resource you may apply as you feel my experiences would be helpful.

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 (817) 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photographs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can be determined by calling +1 (817) 461-4663 anytime, including evenings

and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 (817) 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 (800) 322-1117.

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated Hospital Disaster Support Communications System (HDSCS) of Orange County, California have served over 35 hospitals in nearly 50 emergency situations. At the new HDSCS site on the Web, you can find out how volunteer Amateur Radio operators can be an important backup communications resource for hospitals, if the hams are well organized and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently-Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams, anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly
learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

* Homebrewing
* NTS
* Packet and Digital Networking

I am an NTS operator running an unattended digital (Winlink, latest version) digital system. I operate a hub station for Eastern Canada Digital operations, including AMTOR, PACTOR, and CLOVER.

NTS Training for CW, Phone, and Digital Modes:

http://cc.recorder.ca/~ve3bdm/

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an E-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message BODY. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message BODY:

I am involved in training for new and upgrading Hams, paying back for Elmering received over the years as I came into Ham Radio. I am a VE for VEC's active in local area. I am most interested in assisting young, old, and handicapped persons to discover Ham Radio. However, I want to help anyone that is committed to getting a Ham license or upgrading. I am most active on Ham satellites, mobile and fixed HF, Digital modes and construction. I am an avid electronics constructor, repairer and experimenter. I am trying to sample all modes, bands, and interest areas. I am also skilled in Public Relations, demonstrations, and "de-mystifying."

I am handicapped & spend most of my time at home. My handicap is motor related. I have taught classes in most of the areas listed above. I have been a ham for 25 years. I enjoy talking & working with people. I am a past vice president & newsletter editor for my local radio club. Although not an ARES/RACES member, I have done a lot of disaster & emergency communications. Our local club is VHF-oriented & provides communications for several community events each year. I am active on packet & just recently sold my NODE. Please E-mail or mail me if you think I can help you in any way. By the way, I am married & my XYL is also a ham. I am a Life Member of The American Radio Relay League.

I have a large collection technical manuals. Copies are available for the cost of duplication and postage. THIS NOT A BUSINESS. It is done as a courtesy to those needing assistance.

I lecture and conduct workshops on the subject of ElectroMagnetic Interference, primarily related to problems encountered in the

Clinical (Hospital) environment. This is a program based on papers of which I am the principal author published in journals related to Biomedical Engineering. Related to this activity, I have and use signature analysis equipment and, depending on area and time, am available to assist in location and identification of sources of severe interference to radio amateur activities.

* Australian QRP Home Page
* Peter Parker's Projects Page

Following feedback from readers, I'm pleased to announce further improvements to my World-Wide Web Page.

The main change is the use of .gif images for the schematics and other diagrams instead of .bmp files. This dramatically reduces the size of the files (10k vs 141k). Also, it is now possible to view the schematics online.

Recently added is information on a simple 2m antenna for portable use. Information on other projects will be added as time permits.

You can get to these pages via the URL above.

+1 (937) 256-4355

Dayton, Ohio E-mail Elmers

Sponsored by the Miami Valley (Ohio) FM Association (MVFMA):

http://www.febo.com/

The Dayton E-mail Elmers service allows new or prospective hams in Dayton and Southwestern Ohio, or even experienced amateurs who are venturing into a new aspect of the hobby, to send an E-mail request for assistance. Volunteer on-line Elmers then can provide a response in the "Elmer" tradition of mentoring new or less-experienced hams.

Today, many hams prepare for their license exams through classroom programs, and the individual Elmer's touch isn't as common as it once was. The E-mail Elmer service is an attempt to restore this long tradition. The MVFMA hopes that the initial E-mail exchange will be the start of an ongoing Elmer relationship in the best tradition of Amateur Radio."

Hams may use the E-mail Elmer service simply by sending an E-mail message to:

elmer@febo.com

and posing the ham radio question they'd like to have answered. Users will get a machine-generated confirmation, and within a few days, they will get a response from one or more of the volunteer Elmers.

For more information, or to volunteer as an E-mail Elmer, contact me
at my phone number or E-mail address above.

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

Ken Pulfer VE3PU

jkpulfer@rac.ca
jkpulfer@igs.net
aq627@freenet.carleton.ca

Radio Amateurs of Canada (RAC) Treasurer and Webmaster

(RAC is Canada's national amateur radio society.)

RAC World-Wide Web Page:

http://www.rac.ca/

Callsign E-mail Addresses for All Interested Canadian Amateurs

Any licensed Canadian amateur radio operator can now have an E-mail address of the form:

callsign@rac.ca

This means that you will no longer have to advise all your contacts of any new E-mail address if you change your Internet service provider. Canadian amateurs will not have to keep track of dozens or hundreds of E-mail addresses. Just remembering the callsign is all they will need.

RAC is able to offer this free service thanks to the volunteer help and support of Information Gateway Services (IGS) of Kanata, Ontario, Canada, and in particular the work of Rene Kahle, VA3RDK. Rene developed the E-mail aliasing software, and set up the server hardware (IGS also donates server space for the RAC and ARAS World-Wide Web Pages that contain much useful information for Canadian amateurs).

If you wish to obtain a callsign E-mail address, simply send a message to:

alias@rac.ca

with:

callsign = realaddress

in the BODY of the message.

For example, if my callsign was VA4KP and my real (current) E-mail address was:

ham@qsy.ca

I would put the following in the BODY of the message:

VA4KP = ham@qsy.ca

Any subsequent mail addressed to:

VA4KP@rac.ca

would be redirected by the IGS server to:

ham@qsy.ca

Of course, such mail would NOT go anywhere near RAC headquarters, nor be seen by RAC officials, nor placed in a public database that could be exploited for "junk-mail" distribution. Any E-mail addressed directly to:

ham@qsy.ca

will also be delivered as in the past without passing through the IGS server.

The E-mail aliasing service is currently set up on a trial basis. If it works well and amateurs find it useful, it will remain available for all who wish to use it.

* SAREX

Educational Advisor to the American Radio Relay League

I specialize in developing growth in volunteer organizations and have published and made public presentations on this subject.

I have written and published training/educational curriculums for Novice, and Tech Plus amateur radio licenses. Of interest is the fact that amateurs licensed through my courses are very likely to upgrade as evidenced by the high number of hams in the Lawton, Oklahoma area that hold Extra Class licenses.

I organized and conducted a SAREX in southwest Oklahoma that involved over 3,000 students in 21 schools in seven cities of southwest Oklahoma. The SAREX consisted of an essay contest with the winners being able to ask questions of the astronauts while they orbited the earth. The live SAREX was broadcasts over the Lawton, Oklahoma Public School systems cable television to the public in southwest Oklahoma.

More recently I have been involved in securing building permits in Florida to put up amateur radio towers in this highly restrictive State.

* Current Battalion Signal Officer, 2nd Brigade, VADF
* Certified, NABER and ANSI 45.2 Level III Engineer

I am a consulting engineer, which takes me to various locations. My home address is shown above and in the call book. I can answer E-mail (as everyone knows) from anywhere that I may be.

Don't know where you are going to use a old horse like myself. I am part of the old and part of the new displine. I have fabricated all my wire antennas which includes the matching device (transformer) and been building equipment for more than a quarter of a century. I also manage to repair all my equipment - when parts are available. I restore early age broadcast receivers and HF transceivers. I know the old Heathkit HW100 and HW101 very well and built a Heathkit 5400 transceiver with matching Power Supply. I have constructed many amplifiers and own a Swan, Collins (S-Line), Kenwood, Heathkit, and Johnson. I am very active in the two meter band.

In addition, I have restored many an old Coleman Lanterns (which is very enjoyable) and also have some American Gas Machine Lanterns (1930's).

THE NETHERLANDS CompuServe: pdreynolds@compuserve.com

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emergency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Coordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the subject header of the message blank and in the BODY, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

I have been a ham since 15. I have been an Extra class operator since age 17, and a VE since age 18. [_Editor's note:_ Possibly the youngest Contact VE ever.]

I am an avid HF QRP (low power) and mobile operator. I have spent literally hundreds of hours installing my mobile station (IC-706 and Screwdriver antenna, plus more grounding straps than I can remember) in my 1995 Neon.

Most of the time I operate QRP CW mobile.

Why? It challenges my operating skills as much as possible, plus QRP is safer (RF-wise) than is 100 or 1500 watts. With the effects of RF exposure still unknown, I don't feel like exposing myself to high-power RF fields any more than necessary, and if 3 watts will do the job, so be it, I'll emit it.

In addition, people are generally amazed when you mention that not only are you running just 3 measly watts output power, and on top of that you're doing it from your car as it's zipping down the Interstate at 65 mph. They just can't believe it's possible that less power than a nightlight is bouncing off the ionosphere and ground three times, and is still able to be detected 10,000 miles away.

I'm here to tell them it is.

I enjoy building kits, and consider myself to be a good builder.

I am a fair contest operator, and enjoy 35 WPM CW ragchews as well as hunting for DX.

I am active with both the Laurel (Maryland) and University of Maryland Amateur Radio Clubs, and operate with both during public service events. I have been the chief HF operator at University of Maryland HF-related events (Field Day and Sweepstakes) for the past three years.

As a Volunteer Examiner, I have conducted roughly 150 test sessions, testing at minimum a thousand applicants.

I have recently given Novice/Technician license instruction, as well as taught a 5 WPM code class. I have been told that I have a knack for

describing complex subjects in ways that make them far easier for
laypeople to understand.

* Volunteer Examiner (ARRL and W5YI VEC)

My favorite aspect of amateur radio is contesting. It drives my
station improvements and operating proficiency. I have played around
with antennas and made various station modifications to improve my
contact efficiency. Along the way I have solved some RFI problems,
built many of my station accessories, installed and built some HF
antennas, put up a small (40') tower, etc.

I volunteer as a RACES operator in no particular capacity. I help with
a few VE test sessions a year mostly representing the ARRL VEC with
the Burlington ARC team.

I work as a SRAM design/product engineer at IBM Microelectronics in
Essex Junction, Vermont. I have been interested in electronics and
computers since a young age, but only got my amateur radio license in
1993 as a Technician at the age of 31. I got to know the code and
upgraded to Extra in February of 1994.

Henry Ruh KB9FO

atvq@aol.com

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/ understanding at the burn-your-hand-with-a-soldering-iron level - is drifting out of ham radio. With Japanese radios which cost so much, fewer and fewer hams are willing to risk their warranty to service their own equipment. I would like to see a turn-around here...

Club Activities, Examinations, and other events in the Omaha/Lincoln/Council Bluffs (Eastern Nebraska/Western Iowa) area.

Also willing to provide newsreader kill/select file help to anyone interested in customizing their presentation of the rec.radio.* newsgroups

I would be particularly interested in mentoring/training new FAQ/Info maintainers for the rec.radio.* newsgroups (see also John Seney for FAQ maintenance opportunities). To paraphrase Zack Lau, I can't post it all myself!

I have taken over maintenance of the Perl-based auto-faq FAQ management and posting package from Ian Kluft and would be happy to guide new FAQ authors in its use. The latest version, 3.3, is available via anonymous FTP from:

ftp://ftp.novia.net/customers/pschleck/auto-faq/

The auto-faq-users mailing list has also been re-sited at Novia. To subscribe, send E-mail to auto-faq-users-request@novia.net

with:

subscribe auto-faq-users

in the message BODY. An acknowledgment message will follow shortly. To unsubscribe, replace the above command with:

unsubscribe auto-faq-users

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

ARRL Technical Specialist

I am a pilot (N6141F) with more than 10 years as air and ground search and rescue. Active in ARES, RACES, and Civil Air Patrol (CAP West 41).

I also have a home in Alpine, Texas, USA.

I have started doing a weekend or four-night amateur radio licensing class that works great. I use the ARRL video course and it works super. We watch the tapes, answer questions and then spend a three-hour session giving them practice Novice and Technician tests, then reviewing each question they missed. We have even had students that had studied at home and just did the last session for review.

I now do four or six classes a year, some in Texas and some in New Mexico.

My vocation and avocation both deal with Radio Frequency transmission and propagation. I have spent considerable time working with RF safety issues as they pertain to broadcast radio, television, and now amateur stations.

Presently I serve as Region 3 Administrative Assistant for Air Force MARS.

Additionally, I serve as Activities Director and Chairman of the Field Day Committee for the Viking Amateur Radio Society (VARS).

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical
disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham
radio books and publications on audio tape. Volunteer readers provide
a valuable service to persons with severe physical disabilities and

sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio examinations on-line. The written examinations for all five classes, novice through extra, can be generated complete with figures, filled in on-line, and then graded. The results are presented question-by-question, and also graphically by subelement, so that users can identify areas which require further study.

More advanced options include saving the results of each examination a user takes on-line. These results can be used to monitor progress and also as a basis for generating exams tailored to a user's needs, ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the BODY of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

ARRL Official Emergency Station (OES) and Local Government Liaison

I have experience with antennas (calculations, construction, and repair), all HF digital modes (including HF FAX), wiring of TNC's to radios, custom switchboxes for TNC's, radio modifications, math calculations, personal computers (DOS, Windows, Networking, and HTML), and of course, on-the-air operation and CW. I would love to work with young students wanting to become hams. I hope I can help.

* BBS's
* IBM PC's
* MUD's
* Packet and Digital Networking
* UNIX

I am currently a mature student at King's College, University of Aberdeen, studying for the B.Sc. (Hons.) Computing Science. I enter the third year of this course on 25th September 1997.

I run a telephone BBS in the Fidonet network. This is currently offline due to problems with the telephone line, but is expected to be back up in late September of 1997.

I also have my own IBM compatible computer, which has a P166 processor, 32M of RAM and a total of 4.6G of hard drive space, spread between three EIDE hard drives. This computer normally runs under the Linux operating system, and I am gradually moving the above Fidonet BBS system across from MSDOS to Linux. Because of the lack of suitable software under Linux, I am writing one myself, having had 15 years experience as a professional programmer.

I am a regular participant in AuroraMUSH, a MultiUser system, and have authored several patches to the suftware controlling it. It may be visited at:

telnet://amush.ml.org:4190/

I have been involved with Packet radio for over a decade now. Indeed, it was packet radio that got me interested in Amateur Radio in the first place.

I started up a mailing list connected with the Amateur Satellite world, currently using manual subscriptions. The list is:

Space.Repeater@cus.umist.ac.uk

and is for the discussion of the possibility of placing an amateur band repeater or transponder in orbit around a planet other than Earth, or on the surface of one of the other planets.

I will add that, although I can claim to be something of an expert on both Linux and Packet Radio, I am definitely NOT an expert on the two together.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w#xxx and w#xxx-cis. Mail sent to w#xxx would go to your Internet address, and mail sent to w#xxx-cis would go to CompuServe. MCImail accounts have

the form w#xxx-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

I used to run my own bulletin board system before the Internet came along. I also do my own monthly newsletter called the _Hamband DX'er_ for many years. It is still going. I take care of the ARRL SWL Bureau. My name is listed in any callbook under the various QSL bureaus. I am an avid DX'er of the ham bands with over three hundred countries confirmed. Presently I run my own WWW Page to help others with QSL info requests.

DX QSL Info World-Wide Web Page:

Of the multitude of possibilities of operations, why is Morse code singled
out for support from the feds? Looks like bias and prejudice to me.
CW operations are NOT tested. Only rote-memorizing of the Morse code
is tested.

1st, I believe it's time to start limiting your posts to only one per newsgroup. I don't mind seeing it in multiple newsgroups but, only once per newsgroup please!!

2nd, have you tried submitting a counterpoint and had it ignored? Have you tried to send in an advertisement and had it rejected because it conflicted with "Freddy's" advertisement?

Just curious.

If the FCC accepts the ARRL license restructure proposal, copanies that sell HF gear stand too make millions.....maybe billions of dollars off the deal. Many if not most of these companies advertise in QST magazine (owned by the ARRL). The ARRL through QST would stand to make a lot of money. Isn't this a conflict of interest?

A thought,
Don, W6IQ

Ham Licence? - The written Morse test is by far the hardest part. But the authorities are considering introduction of a multiple-choice morse examination which will give chimpanzees an even chance.

ANOTHER CAMEO RE: KV4FZ
One of the stories Bernie Mogal related to me while I was in St. Lucia (on my boat in the early '80's) was about the experiences of a Canadian ham, Mike Ullock, of Vancouver. Mike had a VE0 callsign and used it from his boat. When he entered St. Lucia he applied for and received a reciprocal license from Alvin Meyers, the radio officer there in Castries.
FZ and his buddy Tony Benvenutti (KV4BA) began making accusations against Mike. They proclaimed that VE0 calls were authorized for HIGH SEAS ONLY operation. Mike was loudly denounced as being a PIRATE!!
After putting up with this for several weeks, Mike wrote the FCC to complain about the accusations coming from FZ and BA from US territory. Finally on August 1, 1983 L. R. Langley, FCC EIC in San Juan wrote to Mike:
"If you are certain that your station is being operated in accordance with all applicable rules and regulations, I suggest you ignore innuendos by Messrs. Benvenuti and Schoenbohm."
Just to make sure he was legal Mike called the radio bureau in Canada and told them about FZ's accusations. In answer to his call he received a long and very official letter from The Government of Canada Deparment of Communications that was signed by R.Y. Drouin. The important excerpt:
"VE0 radio call signs assigned by this administration are indeed for high-seas use by Canadian registered vessels. They are also AUTHORIZED FOR USE IN CANADIAN TERRITORIAL WATERS."
Mike then received a letter from John B. Johnson, Chief of the FCC Personal Radio Branch, Special Services Division stating:
"....When you operate your (Canadian) amateur radio station in the United States, your frequency PRIVILEGES ARE THE SAME AS THOSE AUTHORIZED TO YOU BY THE GOVERNMENT OF CANADA....."
This evidently was the same principle that Mr. Meyers was observing when he issued Mike a recip. So, it is clear that VE0 calls are simply NOT FOR USE ON LAND. They are for boats, both at sea and in territorial waters. That is what Canada intends - and any country (like the US or St. Lucia) is perfectly correct in issuing whatever reciprocal privileges they feel are proper and consistent with this.
Did Herb admit his error? Did he apologize to Mike? Of course not! Herb doesn't let reality change what HE KNOWS to be true via divine revelation. He was and still is totally unconcerned by the hurt he has caused to innocent hams like Mike.

Abdul,
Give a reason why we should do as you ask.!
Was the article by CQ / W5YI informative?
Was it based on the truth, personal comments aside?
If the answer is yes to both of these, why don't you want
us to read it ?
Are these facts contrary to those given by the
A.R.R.L / Q.S.T. ?
Have the A.R.R.L. debated the subject with it's membership
prior to submitting the plan so it is a result of membership
input ?
What is that thing that Americans say" I may not like what he
has to say but I will defend his right to say it"
As one who is foreign born that sounds pretty good to me.
The alternative of "shooting the messenger" prevents information.
What is it about your heritage Abdul, that finds this aproach offensive?
Have a happy, safe and productive week
Art Unwin KB9MZ

Some time ago, when I reached the same conclusion that you have, I did cancel my subscription to CQ. And, as you suggested, explained that I did so because I felt the editorial position of the mag. was against the best interests of ham radio as I saw them.

Won't Fred be disappointed when he learns that he WON'T be making a fortune from prospective new, codeless hams, because the theory test is going out, too! Fred will have to go into business selling the new, channelised, type-accepted gear that Twana has in mind for her new, EQUAL ACCESS RADIO .

How many times do I have to read messages from hams that send a
"Thank You" addressed to ALL. When one seeks help and
someone takes the time to respond, the least the receiver of
help can do is send a simple individual reply for thanks. After
all-the respondents to this call for help responded one by one.
I have received up to 75 messages in a call for help and sent
individual thanks to each. It was very time consuming, but it
was the right thing to do.

Would you at your wedding, if you were the groom, get up at the
end of the reception and yell out, "Gee, Thanks everyone for the
gifts?"
If you are a T Y P I C A L ham--absolutely.

It is unlikely you will respond to this if you did not even bother to
respond to someone who H E L P E D you.

294. List of the rec.radio newsgroups

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-03 00:00:00 UTC
From: jeffreyh@Hawaii.Edu
Message-ID: <6q33al$bdb@news.Hawaii.Edu>
Source record: 165871
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

```
Archive-name: radio/personal-brief-introduction

In an effort help ensure a poster's article reaches the appropriate
audience, below is a list of the rec.radio newsgroups. In most cases,
a group's name will explain its purpose. Cross-posting should rarely
be necessary.

rec.radio.broadcasting (devoted to the broadcast industry; moderated)
rec.radio.cb
rec.radio.info (periodic informational bulletins; moderated)
rec.radio.scanner
rec.radio.shortwave
rec.radio.swap (for buying, selling, and trading; not a discussion group)

rec.radio.amateur.antenna
rec.radio.amateur.boatanchors (tube-type communications equipment)
rec.radio.amateur.digital.misc (packet, pactor and other digital modes)
rec.radio.amateur.dx (long-distance amateur communications)
rec.radio.amateur.equipment (questions, comments regarding commercially-
built amateur gear; not for buying/selling)
rec.radio.amateur.homebrew (devoted to home-building ham gear)
rec.radio.amateur.policy (issues include code, restructuring, local
restrictions in conflict with FCC R&R)
rec.radio.amateur.space (satellites, meteor scatter, EME)
rec.radio.amateur.misc (any topic not covered in the above groups)

(At least two other English language radio hierarchies exist, prefixed
with "uk" (United Kingdom), and "aus" (Australia), in place of "rec.")

Again, cross-posting should rarely be necessary. Many times, a long-
running thread results from a single cross-posted article, and the
contents of such a thread drift further and further away from being
"on-topic" in the various NGs that receive each and every followup.

For more detailed information, see "Guide to the Rec.radio Newsgroups"
posted on the 15th of each month.

Jeffrey Herman (KH2PZ / KH6)

Yes! Do we want "qualified" people who can add to the hobby or do we
just want numbers? What purpose would it serve to have large numbers of
unqualified people licensed? Non... They can just go out and buy cell
phones....or Family Radio Service...even CB... If they want to be Hams
they can "Pay their dues".... or take up golf. I'm easy to get along
with! hi hi

My opinion,
W6IQ

Source record: 165875

Dear Martial Arts Enthusiast

I entirely rebuilt my website and just moved it to a new location at http://www.uechi-ryu.org.

I wish to share good karate techniques, some which took me 30 years to learn.

If I have sent you this email by mistake, type REMOVE in the subject line of your emailer.and I will promptly remove your mane from the mailing list.

Although primarily a Uechi-ryu website, I have substantial experience in a number of other martial arts, specifically the Korean arts, and I write my weekly classes to be beneficial across all fighting systems. I also provide a dojo list and a website link list, which continues to grow. My website also contains other features which may benefit you, so please visit and the first time you do so, send asome email to voice your opinion about my site. Please visit often and read my weekly classes and enjoy.

I would appreciate one initial RSVP of this letter. If you have a martial arts website and would like to exchange links, let me know.
Yours in the martial arts,
-- Allen

P.S. If you have received more than one of these, it is most likely that my mailbox has you listed under more than one email address. Type DUPLICATE to all the ones you wish to have removed. I am taking every precaution to send this only to those I think will be interested in the martial arts and studying from my website.

As someone who works in the satellite industry I can say that
Arianespace has not screwed my employer as bad as the Chinese or
Russians who launch our space vehicles. Have you ever seen what the
remains of a satellite that fell 20,000 feet into a rice paddy looks
like? I have and it isn't pretty. Back to the point, Yes I do
believe they bumped P3D in an 'undue manner' and that a similar
contract with an American company would have resulted in a launch on
(or at least near) schedule, and at a subtantially higher cost.

> in common.

Neither have the price of technology, lotteries and code requirements.

> I'm not talking about lossing HF privliges and I appologize for wording it to
> give that impression.

What I am speaking about is that small barrier that separates people who have the self discipline enough to jump a hurdle instead of crawling under it. It sets a standard that invites the type of individual who doesn't require much policing. Someone who has worked for a privilege and wants to take care of it. Granted, amateur radio is not void of some huge problems. I hear a lot of racist crap on the low bands, jamming, obscenities etc. but for the most part the amateur bands are in fair shape (I only operate HF, so I can't in include 50+mhz in that statement). I have noticed that most of the rise in the amateur problems have increased over the past 10-15 years. I'm not sure what that means. Maybe someone can come up with an explanation.

If it were up to me, I would do away with any technical knowledge required for a license. In this day of plug and play technology who needs to know how a transistor works or how to plot a smith chart. The written is equally as difficult for me as the code is to some people. Is that next? Will it come to

the point that all one has to do is send in an application for a call sign?

73
Brent Scott, N5CLK

P.S. can anyone tell me why when I look for my old call sign on call sign databases it doesn't come up with a cross reference to my new call?

He may be on the masthead, but I suspect he is a contract employee, paid
for the column on a fixed page rate. That does not make him a employee of
CQ, and his opinions may not represent those of the publisher.

If the magazine is carrying W5YI advertising, I suspect he is paying for
the service.

I see no conflict of interest. If you don't like what he says, there
is nothing to stop you from expressing your own opinions.

Regards

Pete

They also ship via USPS, at $7 an item. I guess they never heard of the inexpensive book rate.

From your reply I gather my interpretation of the MFJ order blank was correct - the shipping _is_ per item, not per order.

I can feel your pain, living in Canada. Not only the fact the Canadian dollar currently isn't worth as much as ours, hence a premium right off the bat, but you have to pay high shipping charges too. And VAT on incoming stuff as well? It must be very frustrating. My only experience in Canada, living in Ontario back in the late 50s, the exchange rate was in Canada's favor.

As to a familiar byline, I can't remember doing any books or articles on ham radio. You must have read my computer, video, or broadcast engineering books and articles. Thanks for remembering me. I seldom write anymore.

Ken

319. UK: Bury Rally 1998

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-04 00:00:00 UTC
From: keith@gateheap.demon.co.uk
Message-ID: <902269750snz@g8eap.demon.co.uk>
Source record: 165546
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc

** Replace "gateheap" with "g8eap" to respond **

Bury Radio Society is pleased to announce that they will be holding their ever popular Amateur Radio and Computing Fair for 1998 at the Castle Armoury in Bury on Sunday, the 6th September, 1998.

The Castle Armoury, known locally as the Drill Hall, is the same Venue as Last Year and is just round the corner from the Venue (the Castle Leisure Centre) used for a number of years previously. It is in Castle Street, just near the Parish Church and the Two Tubs Pub in the Town Centre of Bury, in easy reach of the Bus/Metrolink Interchange and Junction 2 of the M66 Motorway, from where it will be signposted. Talk In will be on Channel S22 (145.550 MHz FM) in the Two Metre Amateur Band. There will be ample Car Parking available near to the Castle Armoury on the Day, look out for the Stewards.

The Doors open at 10.30 am, half an hour earlier for Disabled Persons. There will be a multitude of Stalls and Exhibits covering all Aspects of the Hobby of Amateur Radio as well as Computing. There will be a Bring and Buy Area and a Prize Draw also.

There will be ample Seating Areas within the Hall so that Visitors may rest between going round the Stalls and Exhibits and to provide an opportunity to meet up with and chat with Old Friends. There will be Hot and Cold Food and a Licensed Bar available also.

For those Members of the Family not interested in either Amateur Radio or Computing, the Town Centre of Bury has many Attractions including the Castle Leisure Centre, which has many Sporting Facilities as well as two Swimming Pools, and the East Lancashire Railway, which often has Steam Trains running at Weekend as well as many interesting Exhibits, both these Attractions being less than two minutes walk from the Castle Armoury.

This year's Bury Radio Society Annual Amateur Radio and Computing Fair will be bigger and better than ever and certainly not to be missed.

Potential Exhibitors should write to Alan Moore, Exhibitions Manager, Bury Radio Society, c/o Mosses Centre, Cecil Street, Bury, Lancashire BL9 0SB without delay as there are only a few

Stalls still available.

The Bury Radio Society meets every Tuesday Evening at the Mosses Centre in Cecil Street, Bury, commencing at 7.45 pm and Everyone is welcome. The Mosses Centre is in the Town Centre just across the Car Park from the Dual Carriageway (Angouleme Way). Ring 0161 761 2079 during Office Hours for Directions to the Mosses Centre.

** Replace "gateheap" with "g8eap" to respond by E-Mail**

BURY RADIO SOCIETY - DIARY DATES 1998

The Bury Radio Society is pleased to announce its Programme for the remainder of 1998 as follows:-

11th August - Rally Planning Meeting

6th September - Amateur Radio and Computing Fair at Castle Armoury

8th September - "Inter Club Quiz" (Details to be announced)

13th October - "Construction Competition" (Multi Section)

10th November - "Surplus Equipment Sale" (Biggest Ever!)

8th December - "Annual General Meeting"

Bury Radio Society meets every Tuesday Evening at the Mosses Centre, near the Town Centre of Bury, where it has its own Rooms for Lectures and other Society Activities such as 'On Air' Nights etc. On Evenings when there is no Lecture or other Organised Activity there is an Informal Gathering from about 7.45 pm onwards so why not come along and meet the Members. Visitors and Prospective Members of all Ages will be most welcome.

The Mosses Centre is located near the Town Centre, adjacent to Angouleme Way and just a few minutes from Junction 2 of the M66 Motorway. There is a large Public Car Park next to the Centre and there is reasonable Access for the Disabled. The Entrance is on Edward Street, just off Cecil Street.

The Licenced Bar at the Centre is set in a comfortable Lounge Area and is open from 7.30 pm to 10.30 pm and has a wide range of Alcoholic and Soft Drinks at reasonable Prices.

73 de Keith G8EAP and G0WQD

Bury Radio Society, c/o Mosses Centre, Cecil Street, Bury, Lancashire, BL9 0SB. Telephone 0161 761 2079 (Office Hours).

Your grasp of logical thinking is _underwhelming_, moron. If you didn't have the brain capacity of a parakeet, it _might_ be laughable.
You imply that Dan is leeching off the government, which has no basis in fact, and I say that you (That's YOU, CB Rambo) have the intelligence of a rock. Exactly HOW is that agreeing with your statement, Einstein? Dan _should_ have some respect as a war veteran, which is something _you_ never achieved.. If he has a service-connected disability, he SHOULD get assistance. The fact that you worked as latrine orderly and _may_have inhaled a self-combined ammonia and bleach mixture during one of your duty shifts doesn't qualify you for disability. Don't blame Dan for it.

331. RF in the Power Lines

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-04 00:00:00 UTC
From: Major Mooney <fmooney@sprintmail.com>
Message-ID: <6q8eat$jm3$1@oak.prod.itd.earthlink.net>
Source record: 165558

I discovered today that some of my house wiring has very high RF noise coming off it. When I plug an HF receiver into some of the outlets, the band is full of noise. When I hold a battery-powered HF receiver up to some of the outlets, the same noise blankets the spectrum. It appears only on some of the circuits in the house.

Has anyone encountered a problem like this before? Any suggestions on where to look for problems?

> And if we ignore the treaty?What's gonna happen?NOTHING!Just like when
>the other countries have ignored it in in past and present....

The US has always had the reputation of being a "class act"
with small-nation delgates to the ITU, and in a setting where
their one vote is as powerful as our one vote, it would be
very bad karma to jeopardize this position/facade, take your
pick.

Then again, taking an exception to the Radio Regs on the record
- a move permotted under ITU procedures - is not exactly
"ignoring the treaty".

The ARRL has no choice and neither does the FCC. ITU international treaty requires Morse below 30mhz. FCC will pertition the ITU to drop the Morse requirement, but who knows when and if ITU will go along with it.

The Tech Teacher, you are a racist and a bigot. If Canadians didn't go to places like Old Orchard and such, many businesses would simply go broke. Concerning our ham system, I think it's much better than yours. At least we don't feel the need to classify hams ad infinitum by having too many license classes. As to running the continent, I think the U.S. is a specialist in the domain, Canada just goes along for the ride. Take care.

The most important thought being lost in all aspects is that ham radio is a hobby. It does have serious sides (ARES/RACES/ARC, ad nauseum) but it should primarily be fun. I agree with a basic code test, in fact I never argued about the current system. It was a rite of passage.

I also enjoy assembling models, yet I do not have silk screening or painting perfected. For those who enjoy code they are free to embellish and enjoy this aspect. Similarly for packet, TV, etc..

When it ceases to be fun, get out. In the meantime let's accentuate the positive aspects of our hobby and quite debating items which will change. Versatility, after all, is what the majority of you have professed in your notes.
Godspeed

You're a riot.

I have yet to see one of the posts from the ARRL Ad Hoc pit bull staff
arrive after business hours dealing with the issues they like to fend off for
the good of "your League", as the books said until it became "the FCC's
stomping rags at the League".

> > And these are always originated from ARRL. I have yet to see any

> you know when my "own time" is?

1) If it were any more blatant that you two are pit bulls, noted
ventriloquist Steve Mansfield himself would be on here speaking through your
Executive VP, Davey Doody.

2) At 30 plus dollars a year, I hope it's not when you're at 225 Main Street
although that would explain the no-brainers coming out of there, including
the QST lab obsession with 2m radios and receivers, which seems to warrant
knocking that "Dedicated Entirely to Amateur Radio" line off the cover.

Doesn't that creaking and groaning from the ghosts of LaSalle Street and days
gone by keep you boys awake at night ?

By the way, President Hoover says "hi" from LaSalle Street, and Hiram says,
"damn, I knew they'd forget the little man when the built those fancy digs in
the field".

Make sure all the PCBs are tight. I had a friend with the same symptoms
on his. He sent it back, and they tightened the PCBs, and it is as good
as new.

I think that's about 21%
Once a bought a speaker for my TS-930 here on this newsgroup and paid 50$
for it. when it arrived I had to pay 30$ duty. When you "hand cary" the
radio then there is a possibility you don't have to pay fot it.
(you can say it's for personal use)

If you want to lose the HF bands, just keep CW.

Look at the trends in HF and VHF.

I rest my case.

Well, on phone you're supposed to be using the ITU's "Hello All Stations"
- "CQ" is a CW prosign.

Hello,

Thanks for responding to our News Group Posting. And once again we are excited to introduce the ever popular "Southern California Repeater Location Guides". This Guide is invaulable to each and every ham that is active on VHF/UHF. So what are you waiting for? Please take a look at the on our NEW Web Site located at:

http://www.rotd.com/worldxn

Visit before the end of next month and take advantage of our specials...

Thanks Again,
Jennifer R.

Hello,

Is there a keyer on the market or can be easily made for my Bencher
paddles.
Also can I interface the keyer(when I get one) to my computer so I can
run it with Super Morse 4 (Morse Code program for computer)

Any information would be great. Please respond via newsgroups.....my
e-mail is acting up again.

Thanks.

Norm B.

> And how is this different from the ARRL.

Exactly!I wasn't going to renew my ARRL membership,they aren't(and haven't)been doing ham radio any good since about the early 60's!The CW mentality(sheeesh,it's JUST ANOTHER MODE!),along with the incentive liscense disaster are just a couple of their ideas "to help"ham radio.I was surprised to see in the last QST in the "it happened 10,25,50 years ago in QST section,an article from *50 YEARS AGO*!!about how some hams are feeling CW is a "thing to get out of the way when getting the liscense,and not staying proficient in it".I didn't think the CW arguement went back quite that far,I knew it went back 25 years,because when I was a novice,I was complaing about it then....I had a couple of QSO's,and threw the ticket in a drawer.I never even saw it again,I was so disgusted with CW....

Bill,
Obviously you must have been listening to some of our Southern friends.
Allow me to help with Southern speak.

Ya got that right = YES
Ain't no way = NO
O'nt to? = WANT TO ?
Ya et yet ? = HAVE YOU EATEN YET ?
Gotta get gone = I HAVE TO LEAVE NOW
QSL/QRZ/etc. etc. = AMATEUR RADIO TRADITION, get used to it.

Should you need any further instruction in Southern Speak, might I refere
you to any BookStore in a truck stop south of Huntsville, Al.

Just funnin

For many people yes, though here in Australia the tests are easier than in the UK (assuming you guys still have 12wpm random character tests). Here you have a choice of 5 or 10 words per minute of plain text. Five is easy with a couple of weeks practice on a PC; 10 takes a bit more work... :-)

I have a Morse program you can connect your key straight into com port 1
or 2 without any hardware. The keyer is provided in the software. This
is free at http://come.to/g0mdo. There are two programs DMORSE sends and
receives, RMORSE is receive only. Help yourself

Did we ever? It was plain text (plus a separate section of random numbers) when I took it in 1970-something.

I agree with your thoughts of not lowering standards be it radio or school. However, you can drop old outdated or non use techniques and put in place something of equal importants to keep the standards up and be more useful. Case in point, as far as higher learning in school: Drop the courses on how to operated a mathematic sliderule and put a course on how to program a computer. Twenty years ago, sliderules were widespread and people needed to know how to use one, because the electronic age hadn't come yet. Now that the computer age is here, sliderules are history. So drop the sliderule and put computer programing in its place, you haven't lowered your standards. You can do the same thing with radio license testing. I view the code testing about the same as learning the sliderule. Interesting but limited to todays world. If someone wants to learn either skill, go for it.

I wish I could have gotten by with only three years of algebra. When I went to college, we started in calculus and it was presumed everyone had a good foundation in algebra. Should we make everyone take calculus just because?

BTW, I am a General class and I learned code, but it was a nine month struggle and I have promptly forgot it. CQ, CQ, CQ.... MY NAME IS, MY QTH IS..... doesn't interest me. Don't miss code either. I am glad that I was exposed to it on the otherhand.

Mark re-read the statement. I was refering to an analogy of what someone
said a person should be tested for if he only wanted to operate certain modes.
Why do you snip only part of what is sent and comment with something stupid?
Just shows that we lack education here in America.
I feel that all HAMs should start out with a "psychological" test. If they
pass that then pass a code proficiency test, a theory test and an operating
test. The psychological test should be given every 5 years upon renewal
of the license. I have been licensed since 1966.

Lets not make it easier for one to get a license. There is enough DUMBING DOWN
here in America. I see it all the time as a Sheriff's Deputy.

Where have you heard this about 2 and 70cm? You got some inside info with the FCC? What a bunch of SHIT your passing.
There was little to no activity on 220 and they had a byer for the spectrum. That is why we lost it. 2 meters and 70 cm is well populated to loose any spectrum. And by the way wasn't the NO CODE TECH license supposed to populate the VHF, UHF and SHF bands so we would not loose that spectrum?

What have we lost on HF lately? What have we gained on HF?

Don,

Every ham who would have HF privs under the ARRL proposal already
has HF privs under current rules.

They can buy and use an HF rigs anytime they want.

What he needs to do is find some ham who is stationed
in Belgium (Shape HQs) or in Germany. The radio could
be mail ordered (it is shipped to NY postal address, the
oversees cost being picked up by the military). It comes
right to you just as if it was here in the good old USA.
(Of course one could be court martialed for black market
trafficking!)

2 meter FM is a load for CBers with children in the car, although I hear some language from some old farts that rivals what CB used to be dominated by. Repeaters sound like video games with their idiotic beeps, bloops and boops. Commercial repeaters rarely have such oddities- but then, old men can't tell when the squelch drops, unlike say, the highly trained communicators of a towing company...

From: kenk@primenet.com
Message-ID: <6q7i94euc2@nnrp03.primenet.com>
Source record: 165663

I wanted to order several of Ed Noll's books from MFJ's catalog. I've not been able to find these elsewhere. I looked at Amazon - which only has a few of them on 'special' order status - not good.

Anyhow, I've never ordered from MFJ. I see the shipping charges for books are 'A'. Looking this up, I see 'A' is $6 UPS. From what I can figure out from the MFJ catalog and web site, this means $6 shipping - per book!!! Thus if I order 4 books with a total of about $50 the shipping would be an additional $24!!! That can't be right. Can anyone tell me how to calculate their shipping charges so I can order by mail? I'd prefer not to call as I have hearing problems and phone calls can be difficult.

TIA.

>arguement went back quite that far

>>
>> Barry,N8PVX

This has been going on a lot longer than that. It dates to
the early 30's when land Morse was widely used by Hams
who were RR telegraph OP's. They used Land Morse
on the Ham bands so they could have their private club
and only the fraternity could copy them. The big fight
was which code could be used. After WWII the FCC
declared that International Morse was the standard.
Some insisted on still using LL Morse even if it
was illegal.
Radios Op's from the military soon populated the
Ham Bands after the War and wanted their club
again. The fight was the Phone op's vs the CW Op's.
Then in the early 50's the FCC threw out most of the
License classes and the General class had all the bands.
This didn't sit well with the "CLUB" and they screamed
and hollered so the Extra class was created with no extra
bands. It took about 10 years for the FCC to give
in to the "CLUB" members and we have the mess we
have now. The only problem now is that the "CLUB"
members are all over 70 or dead.

Seems strange that all the most sophisticated systems
in communications today are operated and maintained by
non-licensed personnel. The Ham bands are the only place
you need a FCC license to operate any equipment.

I think it's that way so as to keep those frequencies clear of phone and
data. It may in fact be that way BECAUSE those frequencies are allowed to
them, and the FCC did not want to further balkanize the bands. Those
bands are not used exclusively by Technicians. Someone using CW there
would obviously not be able to successfully tell someone who does not know
code that he is interfering - that's the basic idea anyway.

It would have to be a secret, since there exists no outward evidence to
support the idea that a conflict of interest exists. It would have to be
a conspiracy if the ARRL is doing something on behalf of a third party.
(conspire: to act in harmony toward a common end.)

I simply don't buy the argument that these policy changes are motivated by
economics and I do not need to look for secret conspiracies in order to
understand what is going on here.

Thanks Don. The ARRL addresses only the ITU's regulation in the document
you cite. It definitely does not say that no changes should be made to
our code requirements.

I thought the Ed Noll books were published by MFJ. I assumed from that
that they wouldn't be available elsewhere. I always enjoyed Ed's column
in Ham Radio magazine, and have a couple of books of his from the early
seventies. When I saw those books at MFJ, I was pleased because it's
nice to see new material, for the sake of reading as much as any specific
need.

Then I saw the charges for shipping. I'm in Canada, and if I recall it
was even higher to here. Sadly, I never ordered the books because while
they were fairly cheap to start with, they became quite expensive with
the shipping.

I guess I always assume that if a company is dealing with UPS they don't
want to deal with the post office.

By the way, it's good to see familiar names from article bylines of years
gone by. You aren't the only one I've come across the internet.

The rescheduled special event operation commemorating the 50th Anniversary of JFK International Airport (formerly Idlewild), will take place beginning 0000Z August 22 1998, and run until approximately 0000Z August 24 1998.

The operation, sponsored by the Port Authority of NY & NJ and the JFK Airport Chamber of Commerce, will take place on the grounds of the airport at the old Pan Am hangar.

At this time, plans to operate on or near the following frequencies: 7.250, 14.250, 21.350, 28.350. Callsign will be either K2A or W50JFK.

QSL to: NYC METRO, Inc., KB2UDT, attn: Barry Schwartz, 72-22 153rd Street, 2H, Flushing, NY 11367-2642 USA.

73 and hope to hear/work you then.

Also, if you are an Amateur Radio operator in the NYC area, and would like to help operate/log, please contact us immediately, by sending e-mail to: nycmetro@nycmetro.org AND godzilla@panix.com.

Sounds like they're referring more to a QST than to a CQ. CQ is a call to
any station, QST is a call to all stations.

The words are "buyer" and "lose." Learn to spell correctly. Hint: it just may improve your credibility level.

>What have we lost on HF lately? What have we gained on HF?

Now you're changing the subject. Never said anything about HF. You're lucky here; the commercial ops don't want those frequencies.

Welcome to the Auxiliary Communications Service Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here, with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Members: <674>
.....

>From the Editor's Desk:

The Newsletter date has been moved up 2 days to the 3rd from the 1st, to put it on the same day as our EMCOMM Bulletins, which are distributed statewide on Mondays. Publication of the Newsletter will start on Monday, starting with this issue.

Look here next week for an informative 3 part series from our new OES Telecommunications Coordinator (ACS/EAS Programs) Ben Green, who'll give us some insight on where the ACS program is heading in the near future.

We'll be including the URL for the ACS Emergency Response institute (South) in each Newsletter so you can get signed up. Look below in the Current Events section for more information.

Thanks to Dick Epting and the crew of OES COM 25 who assisted the City of Gilroy's 20th annual Garlic Festival last weekend. COM 25 brought in communication consoles and set up a public safety dispatch center for the festival. ACS volunteers issued OES King-Bendix handheld radios to public safety personnel and remained on the scene for the three day run of the festival. Much appreciated!

Stay safe, everybody -- see you next week! Dave Larton, Editor

Dave,

The annual conference of the IEMA is being held in Springfield, Illinois at
the Holiday Inn East (I-55, Ext.94-Stephenson Drive), on September 2-4, 1998.
The conference begins at 1:00 PM on Sept. 2, 1998 with registration between 10
AM and 12 noon Central time. Several topics of interest include:

Mobile Communication Centers- More Than Communications
Disaster Information Managment
Chief Elected Officials: Legal Mandates and Emergency Powers
The Illinois Disaster Management System (IDMS)
Origins of Domestic Terrorism
Animal Disaster Welfare
Grant Writing - Finding the Money
Preliminary Damage Assessment (PDA): The Process

Registration received before 8/1/98 without lodging is $30.00, with lodging
$60.00.

Anyone interested in attending should made checks payable to the Emergency
Management Conference, IEMA, 110 East Adams Street, Springfield, Ill.
62701-1109.

Eugene Kramer, Coordinator Freeburg EMA
ARES EC-St. Clair County/WA9TZL

FEMA TO HOLD HURRICANE DAMAGE-PREVENTION ROUNDTABLE and TOUR

August 3, 1998 - This advisory announces a special event to be held
later this week. More information will be posted as it becomes available.

WHO: FEMA Director James Lee Witt will be joined by business leaders, civic leaders, and citizens who conduct hurricane damage reduction activities.

DATE: Friday, August 7, 1998.
11:30 p.m. - 1:30 p.m. EDT

WHAT: The Federal Emergency Management Agency (FEMA) will host a roundtable discussion and tour on hurricane damage prevention and disaster prevention partnerships between FEMA, the media, and businesses.

Director Witt will take a tour of sites that have been retrofitted to withstand strong winds.

WHERE: Deerfield Beach, Florida
Deerfield Beach High School Gymnasium

WHY: Director Witt will highlight the progress that government, businesses and private citizens, in partnership, are making to prevent the economic loss, damages, injuries, and deaths that result from hurricanes and other natural disasters.

BACKGROUND: Deerfield Beach has been hit by at least seven major hurricanes in the last 75 years and was designated by FEMA as the first Project Impact: Building a Disaster Resistant Community participant in November 1997. Project Impact is a national initiative developed by FEMA that brings together the resources of the public and private sectors to promote actions that enable communities to reduce
the impact of future disasters. In conjunction with Project Impact, Deerfield Beach is actively engaged in community-wide preparedness and prevention activities.

Federal Emergency Management Agency (FEMA)
Office of Emergency Information & Media Affairs --- Washington, D.C.

Information Available 24 hours a day . . .
... on the World Wide Web: http://www.fema.gov
... FEMA is also co-sponsor of Storm98: http://www.storm98.com
... via fax-on-demand: phone in the U.S.A. (202) 646-FEMA (646-3362)

This week's EMCOMM Bulletin:

EMC143 The future of Amateur Radio? Part 3/3 8/3/98

(Continuation of article in "NetControl" by Ray Grimes, titled "The Leading Edge")

"While it might be possible to perform surgery on a commercial FAX machine to accomplish these requirements (if you could obtained detailed diagrams and private labeled ID information) it would appear to be simpler to implement a laptop PC computer with a FAX program, a compact gray-scale scanner or video pickup device, and a compact portable printer at the receiving end, attached to another laptop computer. This information could be sent as relatively low speed FSK or AM video, using audible tone frequencies. The FCC Rules do not specifically limit radio facsimile Amateur Radio transmissions to any particular mode or format, other than the usual station identification requirements.

Compact computer video photographic converters such as the Snappy or Polaroid PhotoPad could be used to capture video and process and store it, using EasyPhoto or most any other video graphic program as a medium. A close-up lens on a CCD camera with a light box would make a nice document reader, offering very acceptable resolution. Most of this hardware and software already exists. It would mainly require someone taking these components and producing a FAX application radio system.

Another facet of the radio facsimile system described might include a secondary application where sample video frames of action could be imported into a Web page for all to view. This would be an excellent method of offering semi real-time video of running teams (and their replacements) in thee Baker/Las Vegas Relay Race, which could be viewed by anyone, anywhere, with a computer and Internet access. A multipurpose, low-speed, visual communications system might be developed that is capable of transmission over most any band and medium, with little or no error.

I hope others find this video FAX mode as interesting and potentially useful as I do for emergency information transmission."

End of quoted article from June, l997 NetControl, Orange County RACES newsletter. Article by Ray Grimes, W6RYS, originally titled "The Leading Edge". Thanks to Ray for permission to use this material.

If you don't respond to insults then why do you work for the ARRL? They have done nothing but insult HAM ALL AROUND THE WORLD with these JAMMERS on 14.313, 14.300, Lib. Net, Our Jammers thats been going on now for over 3 years Now. You all up there do nothing but keep making it easyer and easyer to get a license then do nothing to CLEAN UP THE MISS YOU (ARRL) MADE BY DOING SO! KE4CRM for one has broken ALL of the FCC Rules. Whats be done? NOTHING? You have people from all over the world hearing all this trash comming from the GOOD OLD USA on HF! All the Jammers I hear on HF our from the US! Now you SAY (ARRL) your the VOICE of HAMS and SELF-POLICE Well by the look of things you ALL SHOULD BE FIRED!!!!!!! So I don't belong and will never Belong to the ARRL. I even sold out of Ham Radio, I see no point in wasting anymore time or money on a HOBBY thats heading in the same way CB DID, Right down the drain!

And the current ARRL proposal is in full accord with that statement.
The ARRL is not recomending modification of the ITU Morse requirement
(though the RSGB now is). But there is *no* speed requirement in the
ITU's S25.5, so proposals to change *domestic* Morse speed testing
levels is not in contradiction to the statement you quoted.

And the "real hams" are the one who learned code _just_so they could QRM on 20 and 75 meters? Where's the logic in that? I agree with Cecil, I feel that I am just as much of a ham as any other class of ham. At least in this area, there is no QRMing on the repeaters, unlike on the aforementioned bands.

Well you're special because the US stations are having a hell of a time
getting them out of the AA expedition.

>
> >Go have another referendum. 240 years and they still can't accept defeat.
>
> We did not get defeated in 1759, France did

Actually it wasn't until '63. France was defeated because it was too busy
running, and getting Huron drunk in trade for furs to fight, as usual
(witness this century).

> And after that, YOU tried to invade us a couple of times and got your butt
> kicked back to the U.S.

I'd hardly call a few incursions over the border a war. Also, the UK forts
along the border were the target, not Quebec.

Cec, don't you find it simply amazing that every time there is a
10m contest during the "dead years" the band suddenly opens up?
One is tempted to speculate that we've hypnotized the gullible
tech+ folks into believing that Mr. Sun throws the Big Switch
every few years, leaving them with a worthless piece of real
estate. You wouldn't dare perpetuate such a myth, right? =:o

Oh, compare your 40% figure with the ratio of spectrum
tech+ licensees are awarded to that of the generals; that
ratio will be within epsilon of 1:1. Another way of looking
at it would be:
{increase in spectrum awarded to generals over tech+s}/{spectrum
alloted to tech+s}; the percent increase is within delta of 0%.
The poor generals - so much more work, yet so little gain.

How 'bout this way of looking at it:

{spectrum awarded to Generals on 20 meters and the WARC bands}/
{spectrum awarded to Tech+ on 20 meters and the WARC bands}

Although division by zero is undefined, the return on investment would
seem to be infinite with regard to those bands.

You need to step back so as to get a global view of why the
code requirement exists for HF privileges. RF at HF respects no
boundaries, and as communicators first and foremost, hams the
world over should have at least one mode in common. Right now,
there is only one mode *all* the world's HF-licensed amateurs hold
in common: CW. Whether one chooses to use it or not does not matter;
if the need arises he has it available to him (maybe at a slower
speed than when he was first licensed!). The ITU has this global
view while many individuals have only an insular nearsightedness -
their own personal goals out-weigh those of the global amateur
community.

Wait, let me guess. Your parents met with your teacher, and they
all decided that it would be best for you to repeat third grade yet again.
Damn, how many times is this now? Or maybe you were going to finally admit to
me and to everyone else that you're nothing but a pathetic sociopath (I'll wait
here while you go look it up) who really doesn't have anything better to do
than to
hurl meaningless insults at total strangers all day. Of course, you have
to admit this to yourself first, so that seems unlikely.
Or were you just going to project some more?

For someone that has indicated a strong desire for accuracy in what
people write, this statement by Coyle makes no sense at all. Ed
didn't say the ARRL (or anyone else) doesn't have input and thus the
possibility to influence a decision. Ed siad the FINAL decision is
made by the FCC alone. Of course that decision may be influenced
by any number of inputs from individuals, groups, etc.

Where in the ARRL publications is that stated? Indeed, I keep
seeing morse referred to as a language when it is in no way,
shape or form at all a language. It is a coding scheme only for
the 26 alpha, 10 numeric and a handful of punctuation/special
characters. Nothing about what I send in morse using English
as my mother tongue will make it understood by someone who
only understands Russian, Korean, Italian or whatever other
non-English language you care to think of.

As to Coyle's opinion that Techs are not hams...well that should
serve to tell everyone how much he (Coyle) thinks of being
one community sharing a common love for radio.

Cheers,
Bill K2UNK

Oh yeah, let them eat VHF. I personally don't consider anything
above 30MHz as worth having. When I got my first ham license
there were zero hams on VHF within range of my QTH. There's
only one repeater within HT/mobile range in my home town.

That's why we call it Incentive Licensing.

I don't know way you're limiting your argument to just HF, though; the technician license has traditionally been sought by those desiring V/UHF privileges. We gave the tech+ folks a little bit of HF just to whet their appetites. If that gives them the incentive, then upgrading is their next order of business.

Anyone have any experience with fractal shaped wire antenna design for wire antennas
on the Hf amateur bands? Like to design one for use in limited yard space and run from ladder line with a tuner. Any suggestions or places to find designs?
Thanks
Bill WB3BUW

>
Yes, they are FM. There are cheaper ones that have superregen receivers
and basically a modulated oscillator, and presumably this uses a mixture
of AM and FM, with it being mainly AM. But the units with two crystals
are FM in North America, and I'd be fairly certain elsewhere.

The question of converting the walkie talkies comes up every few months
or so in rec.radio.amateur.homebrew The consensus is that they are easy
to convert, but the ones that are multi-channel use a synthesizer and they
aren't.

I bought a pair for a young friend some years ago, because I was curious
about them. It had a miniscule schematic in the manual. The transmitter
is nothing special, which one would expect for a low power transmitter.
ONce you get past the front end on the receiver, it's pretty much the
same circuit used in a Radio Shack single frequency monitor receive I
have. A ceramic filter at 10.7MHz, an IC that converts to 455Khz and
is the complete IF and detector strip.

I bought another pair at a garage sale. They were much cheaper than
the ones I bought new. I've not got around to it, but I intend to

use the IF strip as part of a 2M receiver.

I think the good walkie talkies have a lot of potential to amateur radio. They aren't so useful simply converted to six meters, but we can add better antennas and even amplifiers to improve the performance. If you give up the pocketability, and fit them in a bigger case, you'll have plenty of room for mods.

Michael VE2BVW

I tried to find on few years ago, Ampenol quit making them .. Solved it
by replacing the panel part with a Radio Shack 4 pin mic connector.
It fits nicely, is not too hard to rewire .. bonus.. my kenwood mic now works on the
heathkit and the kenwood.

Interesting posting, Bill, but I disagree on one point specifically:
"Nothing about what I send in morse using English as my mother tongue
will make it understood by someone who only understands Russian, Korean,
Italian, or whatever . . ."

I have had many a cw qso with dx stations who clearly have no command of
English but DO know the many CW abbreviations quite well and are able to
carry on a non-trivial qso in that vein. Sure doesn't work that way on
phone . . .

Special Event Station, South Bay Amateur Radio Club
At the Main Street USA Car Show, El Segundo, California
Saturday, August 8, 1998, from 12 noon - 5 PM California Time
1900Z - 0000Z

This is being put together at the last minute, so you
won't find this listed in QST. Worse yet, we don't
know if we will have our station running on 20 meters
in time for the event.

Look for Us in the General portion of the 20 meter band.
If we can't get our antenna right in time, we'll
be in the General portion of the 15 meter band.
If conditions are REALLY good on 10 meters, we may
jump to the Novice/Tech+ part of the 10 meter band.

I'm sorry that I can't provide any better information
on where to find us, but those putting this together,
didn't have a change to plan it out carefully.

Certificates will be sent to all stations worked who
send a BUSINESS-SIZE SASE.

W6SBA - Event Station
c/o Lehmans Flowers
321 Main St.
El Segundo, CA 90245
Phone: (310)322-5961

Hi Jim - QST is one of the few Q-signals which is amateur-specific -
you won't find it listed in any ITU pub. It literally means "Calling
all amateurs and ARRL members."

CQ is the general call to any *or* all stations; you'll hear it used
both ways, e.g.:
"CQ CQ CQ DE 3LKM 3LKM - ANI ONE HV SOUTH PAC WX BTWN 140E AND 180?"
and
"CQ CQ CQ DE XSU XSU XSU TFC LIST QSW 448 KHZ UP"

CQ is the lowest precedence general call, the others being
TTT, XXX, DDD SOS, and SOS.

>drivers when they're in the US, lousy QSLers (anybody get their CY9 card
yet
>?) or the fact that Africa is populated by darker people than lilly white
>southern Canada ?

I thought it was Americans who came to Quebec off season. As to being cheap, I have met a lot of Americans who were a lot cheaper than Canadians. Talking about bad driving, have you ever tried driving in Manhattan? I did a couple of times and much prefer driving in Montreal. As to QSLing, I did get my CY0 card and even sold an antenna to one of them, by the way, he wasn't cheap at all. Talking about colored people, they are treated here much better than they are in Dixie land. I have colored neighbours and have no problem with them, only with an Arab one, that one is a real piece of shit.
>

>Go have another referendum. 240 years and they still can't accept defeat.

We did not get defeated in 1759, France did
And after that, YOU tried to invade us a couple of times and got your butt kicked back to the U.S.

437. 49Mhz to 6-Meter RS Walkie-Talkie modification

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-05 00:00:00 UTC
From: "Martin W.Touhey" <xyfog@nycap.rr.com>
Message-ID: <35C801C7.472A27C0@nycap.rr.com>
Source record: 165488

Is there any information on modification of the Radio Shack 49Mhz walkie talkie for use on a 6-meter
repeater? The walkie talkie is model TRC-509, catalog # 21-409 and the crystal frequencies for 49Mhz
are:
16.610 (tx)
16.45833 (rx)
If changing the crystals is all there is to this, beyond a few tweeks here and there, then I guess it's a
great deal and a good club project!
Please contact me if anyone may have any further information regarding this.

THANK YOU!
xyfog@nycap.rr.com

Hmmm that wording sure sounds like TheLibNut Hmmmmmmm ;-)

Since you just _APPEARED_ around the time TheLibNut and I were going at it
(Your FIRST posting was on 07/29/98 according to DejaNews) , I'd have to
speculate you and he are the same IGNORANT ASSHOLE.

You "two" share too much ingnorance in common and express yourselves too much
the same to be different people. Nice try though _MORON_

Rather red faced and frustrated that your IGNORANCE got shown to the world are
you ?????? ;-)

I also like your comments about moppets being around for hundreds of years
before Muppets, since "moppets" are babies or children I'd really expect that
to be QUITE OBVIOUS. Bwaaaa ha ha ha ha ha ha ha ha ha ha ha.

You can go back to being TheLibNut now I won't tell anyone.

To save a life:

Why can't their be politics on Amateur Radio? The answer to that Q+A was that there cannot be any.

Discovering that all the Cadidates are fictional charactors here locally and they are not even anyone who has registered to vote is a hot thing to become aware of. Murphy... Rose... Hey they even elected Charles Bronson as a Congressman here in this part of the Country. When I called his office they were joking about that, and how the public should be more aware of who they vote for.

I asked the clerk at the Salvation Army about these candidates and that they should exist. She just said, "We don't want anymore."

We can't talk about this over two meters then, right?

448. W9ART "Jammer of the Month" for Auguest 1998

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-05 00:00:00 UTC
From: n0vfp@my-dejanews.com
Message-ID: <6q9a4m$8h4$1@nnrp1.dejanews.com>
Source record: 165499

Vietnam Dan is'nt the only problem these days, While you all listen to 14.313 and 3901, Stop by 3950khz and Give W1WCR,WB4AIO,KE2LO,KN4CF,WB2CLN a hand taking on the antics of the Following: KK7HO,K5BLB,WA9KJI,WB0CXJ,W9ART and K5ZU. This post will focus on W9ART "Jammer of the Month" for Auguest 1998.

W9ART is known as Arthur Visser of South Bend IND.

Art has been Jamming 3950 for months now, Doing "Blah,Blah,Blah,Blah"
This is the one of many method of jamming. Lately he has boasted of contacting a Agent Sweigert of the FBI and MR. Richard Lee of the FCC, both whic are probably unfounded taking in consideration his mental state. He seems to a be ballistic indivdual never knowing with his raging temper.

Art must be stopped, E-mail the FCC cc'd your congresman and tell them you want W9ART investigated for these actions. His behavior on 3950 is a warning of things to come if we don't do something about it.

Lately, Art has jammed by trying to check in to the Great Liberty Net, Him and his sidekick, David Castle WA9KJI have done this type of jamming for a month now. You know they don;t want to check-in just cause enough trouble to disrupt the Liberty Net. They start a QSO to jamm the Net. Doing that before the start of a LEGITIMATE NET AND REFUSING TO GET OFF FREQUENCY IS JAMMING!!!!!!!

Enjoy this article.

Hmmm, well, I must confess, I was thinking about the CW test for an Irish amateur licence (or more correctly, radio experimenter's licence), and I was assuming it was the same as the UK test.

I bet you guys never had to wait over a year for amateur test results (as I had to in 1982-1983, before I got EI6BTB)...

Scratchi died when being hit by a bus load of folks going to a Political Correctness convention.

Now, the whole situation is like a Chinese fire drill--opps, the PC police told me to quit using that phrase. Sorry.

> Cliff, W7VVA

Some of that doesn't compute, Cliff. There are only minor differences between Landline Morse and International. LL had some unusual spacing, in addition to a few different characters ("C" comes to mind). Speaking as one who once earned his living as a professional telegrapher, let me state that most folks (including hams) could follow either version quite easily.

Next topic: Why would you reckon that a "CLUB" screamed and hollered to get the Extra class created? As you point out, it gave no extra bands. In fact, the only difference I found when upgrading was that my Extra ticket was 8X11 in size and everyone else had to put up with a wallet-size card. Big Deal! Back then, you got an Extra for the personal satisfaction. (And you had to serve an "apprenticeship" of two years as a General.) At the time I got mine, there were about 3000 Extras in the United States, and we had absolutely no promise that we ever would get any benefit from the additional efforts we put in. (Effort is an understatement. As you probably remember, one took the Extra test in person

at an FCC office, sending and receiving 20 WPM in front of the District Engineer and drawing diagrams instead of answering multiple-choice questions. And don't forget the personal inconvenience for the majority of hams who either had to spend money for a hotel room near the examination point or get up at 4AM and drive like crazy to meet the 8AM code test schedule). So enlighten us.....why did the CLUB fight so hard to get this license class established?

You say, "The ham bands are the only place you need a FCC license to operate any equipment." I cannot believe that remark and the one about "Maintained by non-licensed personnel" were made by someone with a 1 x 3 call sign! I'm sure one or two "licensed personnel" will provide you with some details in rebuttal.

I don't drink, Lipshitz! I suppose I will have to repeat it several times to get through that lump of granite between and on top of your shoulders.

>You're this incoherent and illogical when SOBER? Good grief, you're >sicker than I thought!

I cannot believe how incredibly stupid you are. I mean rock-hard stupid. Dehydrated-rock-hard stupid. Stupid so stupid that it goes way beyond the stupid we know into a whole different dimension of stupid. You are trans-stupid stupid. Meta-stupid. Stupid collapsed on itself so far that even the neutrons have collapsed. Stupid so dense that no intellect can escape. Singularity stupid. Blazing hot mid-day sun on Mercury stupid. You emit more stupid in one second than our entire galaxy emits in a year. Quasar stupid. Your writing has to be a troll. Nothing in our universe can really be this stupid. Perhaps this is some primordial fragment from the original big bang of stupid. Some pure essence of a stupid so uncontaminated by anything else as to be beyond the laws of physics that we know.

469. heathkit microphone connector

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-05 00:00:00 UTC
From: "Bruce E. Corbett" <bcorbett@lucent.com>
Message-ID: <35C85BA7.BBBBCE42@lucent.com>
Source record: 165520
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.equipment

Does anyone know a part number (or source) for the microphone connector used by heathkit? I think they used this 2 pin connector on alot of stuff. In this case, I need it for a SB-102.

Thanks,
bruce n9bh@svs.com

Y'know, the slang term "stump" refers to a male sexual organ, and "jump(er)
refers to copulation, perhaps the term the the proper one for that group of
miscreants.
Slang source material "Slang and Euphemism", abridged edition, Richard A.
Spears, ed. Signet books.

> >"Where's that big 'ol CB RAMBO??"
> > "I wanna hear him TALK TOUGH!!"

While it is just my opinion, I feel that one
of the reasons we lost part of 220 is that there
was virtually no gear built to cover that band.
The commercial stuff was always built to cover
144 and 432, but NEVER 220. There was some stuff
but not much.

The subject is being discussed in the English language. If
the words used are not in the English dictionary, the subject
cannot possibly maintain coherence. Words are a tool for
communications and mispelled words obscure the meaning of
that communications. Think about it (and get a spellchecker).

> this.

It seems to be pretty straight forward. Right now with the set on F
(49.83Mhz), the tx xtal is on F/3 and the rx xtal on (F-455kHx)/3.

For a repeater you will need to use different F's for tx and rx, but
also you'll need to figure how add tone for access, if that's going
to be needed. But are you quite sure these RadShack sets use FM?

Regards,

What STUMPJUMPERS really means:

S = Simpletons
T = Talentless
U = Uneducated
M = Moronic
P = Prosaic
J = Jackasses
U = Unwashed
M = Malformed
P = Pedophiles
E = Epicene
R = Racists
S = Sodomites

C

So drop the sliderule and put
>>computer programing in its place, you haven't lowered your standards.
>>You can do the same thing with radio license testing. I view the
>>code testing about the same as learning the sliderule. Interesting
>>but limited to todays world. If someone wants to learn either skill,
>>go for it.

I say limited basically because most CW people send and receive at a slow speed 5, 13, 20WPM or maybe more?) Yes there is a small percentage of people that can copy at 25+ WPM. CW is like speaking a foreign language and takes lots of practice but usually much slower than voice. Yes its fun for some and yes there are people that get very good at it. If a person likes the challenge, go for it, just like learing a second or third language. In my example, sliderules can get the job done, but they are slow compaired to todays computers and calculators. Should sliderules classes be mandatory? Or should they be phased out (which they are) and the high standards of whatever licensing program be maintained by introducing the study of new technology fitting to the subject? CW should not necesarrily be foregotton but less importantance should be placed on mastering it. A 5WPM test should suffice for all classes of license would be my recommendation.

I bet you more people are communicating by the new electronic internet than by CW. Face-to-face communication, followed by telephone and then followed by internet would be my first guess at the most used forms of communication. I don't belief CW would make the top 10 list.

>towing company...

Good point. My favorite rptrs to operate on have always been beep-less,
with short "hang-in" timers. The second squelch tail (your rcvr's) is
the indication the timer has reset and you can proceed to xmit.

Today's courtesy beep originated from Art Gentry's K6MYK 2m AM rptr
(Mount Lee, Hollywood). Art was the first to build a working in-band
rptr; it went on the air in the late-50s - first rptr ever. The AM rcvr
in his rptr had no detectable noise burst from the squelch - a two-tone
beep was the only indication listeners had that a user had dropped his
carrier (a single-tone beep always indicated that Art or Millie was
operating on the UHF control freq'y).

Because many AM rigs of the day didn't have noise squelch, Art designed
his rptr to have a very long hang-in period - the rptr's carrier remained
on the air many minutes after the last xmission so listeners wouldn't
have to continuously adjust their volume controls.

I grew up listening to that rptr on a Heath Two'er; I still remember
Millie's sweet voice on the tape ID: "This is the Los Angeles Repeater,
K6MYK, Mount Lee, Hollywood." Art was always threatening to shut off
the rptr - the school kids would drive him nuts in the afternoon.

In the late 60s came the Palos Verdes AM rptr, owned by Burt (can't
recall his last name); again, no squelch tail, so a single beep told
listeners a transmission had ended.

Jeff KH2PZ
----------Art's obituary----------

ARTHUR M. GENTRY, W6MEP, SK
The ham that gave each and every one of us the
ability to communicate over repeaters has died at
age 89. Arthur M. Gentry, W6MEP, passed away
about three weeks ago in Beaver, Oregon of natural
causes. Only a month earlier he and his wife
Millie, K6JJN, had moved to Oregon to be with
their grandchildren.
It was back in the late 1940's that Art Gentry
began experimenting with receiver designs that
would permit hearing signals on the same band that

a nearby high power transmitter was operating. By the late 1950's he had developed the needed hardware to put the first practical voice repeater into operation from atop Mt. Lee overlooking Los Angeles, California. Gentry's designs were adopted by both the Amateur and Commercial Land Mobile services and lead to a revolution in voice relay communications that prospers to this day.
In addition to his developing repeater technology, W6MEP also helped to pioneer the technical side of covering breaking news stories. One of his most significant contributions was in the design of the KTLA Telecopter for Golden West Broadcasters. This was the first remote broadcast facility ever installed on board a helicopter and is the fore-runner to the news choppers of today.
Bill Arens, N6NMC who has operated the repeater for the past six years says that he has submitted a request to the FCC to grant him special dispensation. This, so that the callsign W6MEP can remain on what is the oldest continuous operation repeater in the world.

A note from Wayne Hoffman, wb6wlr,
I heard on one of the nets the other night from the guy who actually has that repeater. He has offered it to the Smithsonian Institute. The Institute is very interested, but there is a substantial cost to provide space, and get it packed up and shipped out. The local club is working together to raise money, find photographs and other related stuff.
Sounds like it's in good hands, and it will eventually live in Washington DC.

>Has anyone encountered a problem like this before? Any suggestions on where
>to look for problems?

If the noise is only on some circuits, Fred, it is probably originating in your house. Throw the main breaker and see if the noise goes away on your battery receiver. If it does, power back up and then kill one branch circuit at a time until you locate the one powering the source of interference. Then go see what's plugged into that branch. Typical culprits are touch lamps, fish tank heaters, doorbell transformers, faulty flourescent lamps, etc.

It is also possible that the noise is coming into your house via only one leg of your power service. In that case, you may have to kill every breaker on one side of the breaker box to make it go away. If that's the case, you may have a neutral fault in the feed to your house. This is dangerous, have it checked out right away.

The final possibility is that the noise is coming from something in the house of a neighbor who is hooked to the same transformer as you. But that would typically show up on all circuits, not just some of them. If you're on speaking terms with the neighbor, try to get him to throw his main breaker as a test.

A final final possibility. Do you have an outdoor yard light, or a streetlight hooked on your service pole? If so, it may have a bad ballast or starter which is causing the noise.

[Posted and mailed]

another example of the league in action... one night i called the regional director for the league after listening to a tape of the new features of a new gm car [complete with long stretches of music] for almost an hour on, yup, 3950. well, as it turns out, the man had his number listed in qst, and did not apparently own an answering machine. after apologizing for waking him up [i expected an answering machine, given that his number was published in a magazine with the circulation of qst], i proceeded to explain what was happening at the moment on 3950, and even let him listen.

he proclaimed that the arrl cannot do anything about 3950, and that it was free speech [ahem, part 97 says it's broadcasting]. after i reminded him of the fact that the arrl now has first level enforcement responsibilities through the amateur auxillary, and that it was his responsibility to do something about it, the man went into a completely unrelated rant about president clinton being "a crook". I told him at that point that there was no proof of that, that it was unrelated to the topic, and hung up. YARWW [Yet Another Right Wing Whacko]...

i remain a member of the league for only one reason after this, i still enjoy the magazine. my opinion of the "fox guarding the henhouse" modus operandii of the arrl when it comes to policing the bands is that it is a sick joke.

we need the league removed from part 97 as the recognized group, and a return to funded enforcement activities by the fcc.

the only way it seems in this day and age to get part 97 enforcement allocations back to the fcc is to elect a new congress this year, catagorically kick out these "R"'s that are making the current problems worse by refusing to provide funding for law enforcement of all kinds.

also, where does the league get off on making like IT IS THE FCC when it comes to a unilateral restructuring of the licensing requrements under part 97? accrding to Newsline, the arrl is attempting to get their proposal on the FCC's "fast-track". this means hthat there will only be a 30 day comment period. let's see, magazine lead-times average 90 days, gee too late!

i suggest that we all watch the FCC web page for moves on this, because by the time it hits the magazines, it will be long since decided one way or the other.

We don't need anymore CB mentality than we already have on HF. Sounds to me like the "old farts" are leaving amateur radio to the wolves and giving it up for dead.

I'm tired of hearing all of these "Waaaaaaahhhhh!!! .-.- .-- is tooooooooooo haaaarrrrddddddd, WAAAAAAAAAAAAAAHHHH!!!" something-for-nothing types being pandered to. if i can learn it YOU can learn it .-.-.-

Not everyone against the league is against cw.

the only way i would even accept the new proposal is if it were conditional on enough enforcement money being allocated by congress to clean up the service, and put the pheer of the FCC back into amateur radio. in my estimation, vhf included, about 10,000 to 50,000 fines in say the $10,000 range each should do it... It would probably take 24 hours of monitoring to do it [so, i might be exaggerating... 48 hours]. Occassional swear word, who cares, i'm talking about the serious violators of part 97.

Not a single "R" in the house or senate in dc will do it.

Don't be a dumb-ass,
Be a smart-ass,
Vote Democratic!

[or whatever, just don't re-elect the Republicans, which are the heart of the problem].

Strange that "Mr. Valentin" listened to "hundreds of hours" of the Liberty Net when his receiver was tuned almost 50 kHz off frequency, isn't it?

This is a rather crude forgery:

1. The path and posting host information in the message's headers indicate that it was posted from an MCI account in or near Chicago, Illinois, though the forged address claims a University of Southern California source.

2. The "reply to" information in the header is botched where the forger placed a comma and space where a period should have been. Replying to the message won't work with the line botched like that with most newsreaders. No real user would leave such an egregious error in place.

3. It seems unlikely that a "researcher" who has spent "the past two years" studying alcoholism would misspell the word "alcoholic" as this forger did.

4. The Liberty Net is not found on 3901 kHz.

Nice try, hot shot. But not good enough.

Cheerio,

Kevin, WB4AIO.

509. Need Knwd TR9130 Info

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-06 00:00:00 UTC
From: Robert <rll@hubwest.com>
Message-ID: <35CA664B.5753@hubwest.com>
Source record: 165240

I need some info about the Kenwood TR-9130 2 mtr all mode xcvr that I am considering purchasing. It does not have an operating manual and I am wondering about some connectors on the back of the xcvr.

1)Am I correct in assuming "backup" is for a backup battey source to keep the six(6) memory channels programmed? Anybody know where I can get a female plug to match the male connector on the rear panel?? What goes to each pin in that connector?

2) There is an "aux" connector on the rear panel. What is it used for? input of tones for repeater access?? There is a tone push button switch on the front panel that may be for enabling a tone for repeater access, but I doubt that there is a tone board in the radio. Any recommendations for a tone board?? Also, where to get the male plug?

3) There is a "Standby" connector on the rear panel. what is it used for?? external amp keying??

It seems like a nifty rig. It looks like I can get both the op and service manuals from Hi Manuals in Iowa. I am just a little impatient right now and want to satisy my curiosity about the above connectors. Any help will be greatly appreciated.

73, Robert W6RQR

510. Re: 49Mhz to 6-Meter RS Walkie-Talkie modification

Newsgroup: rec.radio.amateur.misc

re: need two of these-- .... or use a seperate receiver...

Dohh...I changed the 2 crystals in a Radio Shack TRC-505 and it works
just fine into our local 6m repeater. I wouldn't recommend it to those
who are more than a stones throw away from the repeater though.
The little HT is only good for about 10 mW or so.
I changed the whip antenna on mine...I gained a little more range
but what made a bigger difference was adding a counterpoise by
hanging a 1/4 wave piece of wire from the HT that was connected to
ground.
I didn't need to mess with the audio...it sounds just fine.
The other thing to consider is that the crystals might cost more than
the HT. For the total cost you could probably score a used
commercial lowband HT with a couple of watts o/p.

Cheers, Hugh Duff VA3TO

First let me say 73's to everyone.
I just picked up a used Kenwood TM-241A, There is a problem in the MC44DM microphone I think? The radio will transmits but with no audio. Anyone with this problem please respond with your info. A wire diagram for the microphone, the radio and any mods you may know of for this radio would be useful also.
Thanks to all, n3ysy@qsl.net .

512. IPS Daily Report - 06 August 98

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-06 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <6qddr3$d9@flare.syd.ips.gov.au>
Source record: 165243
Cross-posted to: aus.radio.amateur.misc,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 06/2330Z AUGUST 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 06 AUGUST AND FORECAST FOR 07 AUGUST - 09 AUGUST
STATUS INDICATORS SOL:** YELLOW ** MAG:** RED ** ION: ** YELLOW **

1A. SOLAR SUMMARY
Activity 06 Aug: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 06 Aug: 138/92

GOES satellite data for 05 Aug
Daily Proton Fluence >1 MeV: 2.6E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.90E+06 (normal)
X-ray background: B3.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
07 Aug 08 Aug 09 Aug
Activity Low Low to moderate Low to moderate
Fadeouts Possible Probable Probable

Forecast 10.7 cm flux/Equivalent Sunspot Number for 07 Aug: 145/99
COMMENT: A solar region in the south east quadrant is showing
continues growth, also two new solar regions are rotating into
view on the east limb. Solar activity is expected to increase
over next few days. A shock was observed in solar wind speed
with an increase from 360km/sec to 430km/sec observed at 0700
UT.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 06 Aug: The field was a quiet
levels until 0800UT, when major storm levels were observed until
1500UT.

Estimated Indices 06 Aug : A K
Learmonth 31 4346 6222
Fredericksburg 40
Planetary 70

Observed Indices 05 Aug : A K
Fredericksburg 6

Planetary 9 1213 3332

2B. MAGNETIC FORECAST
Date Ap Conditions
07 Aug 20 Initially quiet, then becoming active (with possible
minor storm periods) during local night hours.
08 Aug 8 Quiet to unsettled
09 Aug 8 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 24 was issued on 6 August and
is current for interval 7 August only. Activity observed overnight
was not expected and its solar origin is not clear.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
06 Aug Normal Normal-poor Normal-poor
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
07 Aug Normal Normal-fair Fair-poor
08 Aug Normal Fair-normal Fair
09 Aug Normal Normal Normal
COMMENT: Degraded conditions observed at mid to high latitudes
during local night hours. Further (milder) degradation expected
during local night hours on 08 August, mid to high latitudes.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
06 Aug 83

Observed Australian Regional MUFs:
Mostly near predicted values at all sites in the region.
Strong enhancement observed during local night hours
in association with geomagnetic storm activity.
Very strong spread F was observed during local night
hours.

Predicted Monthly T index for August: 83

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
07 Aug 60 near predicted monthly values
08 Aug 75 near predicted monthly values
09 Aug 75 near predicted monthly values
COMMENT: Degraded HF comms conditions observed overnight. Local
regional HF conditions are expected to be initially fair to normal
then becoming degraded again during local night hours. Comms
quality for southern region may be variable.

The battle was lost in 1759, in 1763, the King of France decided it wasn't worth it to keep New-France because la Martinique and Guadeloupe islands were far more lucrative because of the sugar plantations there. I think the king made a very bad choice, look at New-France (Canada) today.

The last time it happened, they were going for Montreal but got stopped by Guy Carleton and a bunch of Indians and French-Canadian peasants. Benedict Arnold tried that also with Quebec city but really made a boo boo. At least he was helped a lot by French peasants in the Beauce region near Maine, otherwise he would have lost most of his army. The peasants weren't cheap but humanitarian.

I have to agree, The entire mess is created by licensed hams that will
never follow the rules....
second who cares......most of the enjoyment of radio came from the tech
aspect as far as I am concerned,
but for the persons who in the past enjoyed conversations of substance,
this is a thing of the past, with the jamming,
and all the other non radio related issues. K2IJY

I would agree. We already have a no code license and we still have no end to the spectrrum threats. Chucking the code will not save ham radio. It will not end the communications revolution. It will not end the proliferation of unlicesned devices. It will not end the accusatory enviornment that we have to operate in. It will not end the spectrum auctions.

We already have unlicesned ham radio. It's called "Family Radio Service" Expect new FRS radios in the 33cm band some time soon. With expanded RF limits. Repeaters, autopatches. etc.

Half my cb buddies are already licensed. They want HF do shoot skip on but wont be bothered to learn the code.

The other half are waiting for an end to the technical exam requirements. They wont be on HF. (and if they are, they'll be engaging in local ragchews on 20m)

What WILL happen is that nobody will belive the ham is right in an interference matter.

We are the last of the breed. Even the service technicians dont always have a FCC commercial license like the General Radiotelphone Op ticket. They're not required to. The schools don't turn out techs, they turn out engineers. Long on math, short on tweaking stations and dealing with faulty metal-metal junctions.

The future of radio is as a consumer product. Expect lots of lawsuits and pissed off consumers. Expect service techs about as knowlegeable as the recent hire at jiffy lube (if you're lucky, he's retired from somewhere else)

The broadcast industry already chucked its certification requirements. All they guard is their station licenses.

Face it, your only hope is to get in bed with the military industrial complex. Fancy that... a security clearance as a license requirement!

Source record: 165353

CQ is about the most boring magazine devoted to amateur radio that I can think of. I am 23 years old I bought my first issue of CQ when I was back in 7th grade. I only bought CQ because I thought it would help me learn more about amateur radio, because I didn't have my license yet. I should have been buying QST or something a little easier for the beginner to understand. I quit buying CQ years ago, I still have about 30 issues or so of the magazine, but CQ has just gotten to be too expensive. I believe it sells for something like $3.95 now, not worth it! It's pretty bad when the only interesting thing about a magazine for ham operators are the ads for new radio gear!

Have about 50 used 6 and 7AH 12 VDC gel cells for sale. All load
tested good. PERFECT for QRP rigs
and portable operation. I have sold hundreds of these to the QRP boy's
on the QRP mailing list and all have been very satisfied. Had a few
damaged in shipping and one came back DOA which I replaced for the
fellow free of charge but that's it. I am the service manager for an
alarm company and we change our customers batteries every 3 years as
preventive maintenance. These used cells should provide another 2 to 3
and probably longer service if used and recharged properly. Cells come
fully charged and are ready to go. They can be recharged with a simple
wall wart charger available at Radio Shack or a 1 amp automotive
charger. I guarantee against DOA.
Brands are Yuasa, Interstate, Radionics and Portalac.

4 ah cells are $8 shipped CONUS (SOLD OUT)
6ah cells are $10 shipped CONUS
7ah cells are $12 shipped CONUS

Images of the cells can be seen at:

http://www.usol.com/~tje/yuasa6.jpg Yuasa 6ah

Alan,

Nice to know somebody remembers Cromemco. Microcomputers have advanced and matured fast in the last thirty years so that a "sci.antique.microcomputers" dealing in everything about "antique" microcomputers should be a good outgrowth out of interest in electronics.

>If you have an old Cromemco Z-1 or Z-2 or something close to it and
>you are interested in digging it out of the corner, let me know. I'd
>like to buy one or the other and we could work out an incentive for
>you to go dig it out out.

The Z-1, Z-2 looks and weighs in like a 'boatanchor'. You must be into collecting. Good luck. I saw once a complete set of the series in one of those fund raising used-stuff stores for something like twenty bucks. Discouraging prices reflecting the demand for the stuff but it disappeared overnight. I didn't need it, I still had my own still sitting in the computer room much like an old vacuum tube set. Takes up too much space anyway to get another one, even for collecting. One day, I'll fire mine up again just for the 'll of it to stare at the cursor. :). The thing was like the Collins in its heyday. It cost a lot more though. And the software choices were very limited. Cromemco disappeared as part of another company. The S-100 bus design microcomputers were overcome by IBM, shrinking demand, and plain economics.

Jim Run and myself were on last night but heard no one. The band was open
about 4:30pm Central time but I was only hearing a couple of stations on FM.
Did not hear any activity on SSB. Called a number of times CQ with no
success. Rus and I were on RTTY about 8:30pm central time and quit about 9pm.
Tonight I have school but should be home about 8:30pm CDT and will fire up the
rig then.

I might just subscribe today.
I do however welcome counter points of view.

The point that is now being forced upon the ARRL via the FCC is that the ARRL was not sharing the same view concerning Morse Code as the majority of the Hams licensed. Judging by your tone, you may be part of this minority.

I believe Gary did a marvelous job of logically explaining where we are in Amateur Radio and how we got here. You may want to use DejaNews to look some of this material up.

I agree with Casey. What's wrong with a little challenge now and then to prove to yourself that you can and to the fraternity that you really want it.

As for justification for CW, I think there will always be a need for it. Imagine for a moment a worldwide catastrophy of some sort and you were able to survive, but your gear didn't. You have nothing but junk and parts left and you have to rebuild something to communicate. A sophisticated ssb unit is out of the question, but a simple oscillator is not. Hmmm, maybe CW isn't such a bad idea after all. John

Proof that CW is not a different language is that the shorthand notations can be used with ASCII, RTTY, AMTOR, PACTOR, etc. One wouldn't say PACTOR is a language.

Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.amateur.equipment

Also apparently used in the HW-101 and HW-202 and perhaps more. I suspect that you don't want the Heathkit numbers so, not to keep you in suspense, in a 2-3 year old Allied catalog, the connectors are now made by Wire Pro, Inc. instead of Amphenol:

Allied # Mfr.'s # Description
cost
719-3105 80-MC2M Male Plug $6.92
719-3110 80-PC2F Female Receptacle $5.16

Allied's Service # 1-800-433-5700 or htttp://www.allied.avnet.com

As I stated, this data is a bit old, so check for more current info. Of course, you might want to just go and switch the connectors to something more convenient, especially considering that the returns for the microphone and PTT are soldered to the spring strain relief, which then is mechanically connected to the microphone shell, to make the third terminal in the circuit.

ï¿½Tired of not being able to get on the air when the wife and kids are using the telephone or computer? Let my RFI Filters solve your problems for good. - Modular design - Simple install - Many in use in Amateur radio and CB service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail, Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time in the past or present, the Attorney General of the State of South Carolina would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic devices known as "RFI Filters" that contain nothing more than about 60 cents worth of useless surplus electronics parts. Mr. Whiten claims to have a ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US Patent database yields no such patent application or any past patent activity by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced.

Listen for me on 27.665 LSB using my latest 5 KW amplifier.
Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160.
Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+
Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

Message-ID: <35C9CAC5.5411@snet.net>
Source record: 165385

I have been sent a zip file attached to an email. I use Netscape 3.0.
It says in the bottom of the message MS-TNEF and WINMAIL.DAT used MIME.
When I save the message it gives me the file MYPROG.EML. It is supposed
to be MYPROG.ZIP. I tried to use the standard UUAVIEW.EXE and it does
not know what to do with
it. The MYPROG.EML has a text header and then I see blocks of code after
it.

Can anybody come to my rescue?

Frustated
Thanks for reading

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a

complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

ï¿½Tired of not being able to get on the air when the wife and kids are using the telephone or computer? Let my RFI Filters solve your problems for good. - Modular design - Simple install - Many in use in Amateur radio and CB service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail, Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time in the past or present, the Attorney General of the State of South Carolina would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic devices known as "RFI Filters" that contain nothing more than about 60 cents worth of useless surplus electronics parts. Mr. Whiten claims to have a ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US Patent database yields no such patent application or any past patent activity by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. Hello Radio buffs. <g>

I need a (circuit) schematic diagram for an old Zenith
Solid-State AM/FM Receiver which came from a wooden console-type
stereo built sometime in the 60's. There was none inside the
cabinet and the only info inside it was a little chassis
pictorial sheet with patent dates of '46,'49,'50,'51,'61 on it.

CHASSIS MODEL #: 35WDR50Z1

Zenith Inc has been little or no help at all ... as were their
'affiliates'.

Can someone please tell me how or where I can get one for this
thing ... or does someone by chance still have this stereo and have a
diagram they can fax a copy of to me?

Thanks.

581. Thursday Preview of this Week's ARRL Lather

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-06 00:00:00 UTC
From: TheTechTeacher@my-dejanews.com
Message-ID: <6qd1i0$g3p$1@nnrp1.dejanews.com>
Source record: 165401

Well, it's Thursday again and those staffers are getting ready to set this week's propaganda medium in the hot Narcington sun.

In this week's piece of a greasy rag:

HOW TO BOLSTER YOUR FABRICATIONS BY POLLING ONLY THOSE YOU WANT ANSWERS FROM- NO CODE SPECKS IN THE FCC PROCESS IN DEPTH.

Why do all the polls show 55 percent in favor of restructuring and 45 percent against, except for the ARRL VE poll (of which only 14 percent of those asked responded) ? This one poll shows a "overwhelming majority in favor," as ARRL has declared. Special feature this week- how former ham George Gallup got himself fired from ARRL HQ in 1957 for "being too darned scientific, by golly".

Other poll related news- could it be pure chance that even the other polls are just reflecting the fact that 55 percent of hams are no-code speck "have-nots" and the rest of us aren't ? (hint: that's rhetorical, ed.).

ANYONE NOTICE THEY USED TO CHARGE FOR THIS PROPAGANDA ?

Yes, that's right, in the days when anyone gave a crap about ham radio, we used to tack this dribble onto your membership fees if you wanted to receive it ! Now you can laugh until Jello comes out your nose for free.

ARRL RELEASES RFI DITTY

You might not be able to get QRV as they say here in Narcington, but we have a 20 dollar book that'll keep you guessing long enough to renew your membership until next year ! Try to solve RFI with rehashed useless garbage from our Lab Head of Hair.

Requires valid ARRL membership to remove encryption device from the sections Ed wrote !!!

DID DAVE SLUMBER GET HEAT STROKE ?

Rumors abound at HQ whether Dave "the puppet Doody" Slumber took one to many naps in the shade of the 120 footer. We on the inside think that's why the words are coming out of his pale bald dome in a contorted,

twisted, inaccurate way.

While your argument makes sense on the surface, I wager the dropping of (more stringent) CW testing will not be accompanied by an increase in standards elsewhere in the test. I site the history of the testing program here as a clear example of how standards slowly, but surely drop.

It has been my experience that many opposed to the CW requirement simply don't want to spend the extra effort, regardless of the subject. They will be no more accepting of an increased technical requirement than they are the CW requirement. After all, why would most Hams need to know about resistors, transistors, tubes (gasp!), etc. when all they do is go down to RS and buy an HT. Why should they have to learn all that irrelevant stuff? They aren't building radios. All they need to know are operating protocols and a little bit on safe operation.

Give in on the CW requirement and the rest will surely fall. Do you believe the bands will be better after this? I don't. 5 wpm CW is not that hard, really. If, for whatever reason, 5 wpm is unreachable, there's still the Tech license. What with repeaters, packet and satellites, there's more than enough modern research work to do and fun to have on 50MHz and up. Why would anyone doing, for example, spread spectrum work want to be on the 80M band?

If they do succumb to the clamor, I hope they leave a little bandwidth on HF reserved for CW. It needs so little, given it's efficient use of spectrum.

Just my $0.02 worth.

I agree totally. You don't hear the opening drum beat to Aerosmith's "Walk This Way," then go write down the musical notes on staff paper to figure out what you're hearing. You learn to recognize it by the way it sounds. CW is the same. Memorize the invidual sounds, then recall them on the fly.
Well put, Jim

I guess the view at the end of "225 Pension Street" for a bunch of losers who were so obsessed with AMATEUR radio they couldn't get REAL jobs warps the colors when viewed through the lense of their own mediocrity.

"In their discussions, Board members emphasized that the objective is to rationalize and simplify the amateur licensing structure without reducing the requirements for any class of license."

What crap ! How does cutting CW speeds equate with not "reducing the requirements" ? Are these spastics as befuddled as they are stupid ?

For those ARRL BoD members who don't understand non-ham radio English, the rest of the world sees "simplification" and reduction as the same concepts. And as far as requirements go, if you cut speed, you, let's all repeat, since that's what most of you jellyfish geeks all do- REDUCE !
There is no difference.

"Where reductions in Morse code requirements are proposed, there would be a corresponding increase in written examination standards."

That will be easy with the Feds mandating open question pools. See what your kids know if their teachers do that for 4 years of high school and get back to me.

"On the other hand, Board members were adamant that simplifying the structure should not come at the expense of privileges already earned by amateurs."

I consider it a privilege of my 20 word code test not to have every ass wit ha KW in the subband with me. Thus you are taking MY pivileges.

Spread this to each and every member of that 120 person opportunist staff. YOU ARE MENTALLY CHALLENGED, AND A PRIME EXAMPLE OF "SIMPLIFICATION" AT WORK.

I am a researcher in abnormal behavior. I've been working for the past two years to characterize alcoholic character traits and behavior. I was "put on" to the radio Liberty Net by a student who was kind enough to loan me a shortwave receiver. I have listened and recorded hundreds of hours on shortwave frequency 3901 khz. I am extremely happy to have heard untold numbers of examples of obvious alcholic behavior, manifested as irrational anger, resentment and childlike acting out.

I have put together an edited cassette for the Behavioral Sciences department that is absolutely invaluable. Listening to this tape will provide many students first hand knowlege of the complete set of character defects that make up the "typical" alcoholic. Although these fellows are probably a thorn in the side of the radio hobby, their behavior will serve as an excellent example of systemic degeneration and mental decay for many years to come.

I have been informed that posting this message in the above usenet category may reach the largest number of Liberty Net members. Thank you again.

One last thing, I have always believed that use of profanity on any public airwaves was illegal. I am wondering why the appropriate enforcement agency has not acted.

Thank you,

J Valentin PHD

>prospective builder becoming an appliance operator.

You seem to assume that the *only* alternative to a CW transmitter
(and you keep forgetting to mention that pesky receiver that's required
too), is a SSB transmitter. That's definitely not true. A FSK transmitter
is only trivially different from a CW transmitter, actually a tad simpler
than a CW transmitter if you care about controlling chirp and using
proper keying waveform shaping. And after that FSK transmitter is
built, you can operate it immediately with that software you downloaded
from the net, no need to spend months conditioning wetware to be a
poor emulation of a modem before you can operate. (And FSK is
very effective QRP, even the "high power" boys seldom run over
50 watts.)

Or, a microphone and a single chip and you have a FM transmitter.
The receiver for *that* is easier to build than one for CW too. Anyone
who can speak can operate it, no tedious months conditioning wetware
to be a poor modem emulation required. Of course you'll want to do this
on VHF, but then the entry level license is for VHF anyway, and that's
where you should learn to build such simple stuff before venturing onto
HF and trying your hand at something a bit more advanced like a HF I/Q
quadrature QPSK transceiver, which milliwatt for milliwatt will knock the
socks off any CW rig for weak signal performance (and is still dead
simple and cheap to build, gotta love VLSI).

But if SSB is what you want, SSB rigs certainly aren't rocket science,
contrary to popular opinion, see the R2 and T2, a couple of DBMs and a
few opamps, and there you are, SSB transceiver. You can tune it up with
nothing more complicated than the ability to understand speech. No need
to spend months conditioning the wetware to be a poor emulation of a modem

is required. More power? Everyone who builds at HF seems to build a linear sooner or later. They're dead simple, even CBers hack them together, and you really don't need to make it a kilowatt to be effective. A pair of MRF455s and a couple of toroids and there you are, 100 watts. Or you can use one or two medium size glow bottles and get the same thing. Want bells and whistles? A PIC is $2, and anyone can learn its simple assembly language in a couple of hours (or blow a whole 34 bucks and get one you can program in BASIC). Etc.

And the nice thing about the skills you develop doing any of this is that they are *transferable* to other radio services and other facets of communications. Conditioning the wetware to be a poor emulation of a modem isn't transferable any longer because that sort of thing has been tossed on the ashbin of history by everyone but amateurs and a few third world employers who still depend on coolie labor. It is far better to use those wasted months developing marketable electronic skills instead.

True, but then you don't have the crystals you need for the HR-2B
yet either. :-) Note that you can fit your own naked crystals to any
old channel element, you don't have to buy a new high buck channel
element to get on frequency. The naked crystals are the same price
as what you'll pay for HR-2B crystals. Doing this won't be as
temperature stable as buying a compensated channel element,
but it will be at least as stable as the HR-2B crystals will be. In
your climate, that'll be plenty good enough.

>73 John

That's the reason we use LSB on lower HF and USB on upper HF, but
it isn't the reason for having everyone on a given band use the same
sideband, whichever one that is.

And I'd note that while that was a common mixing scheme in the early days,
it wasn't the only one. And many rigs using this mixing scheme still had
switchable crystals in the SSB generator so that they could operate either
sideband. The big drawback of this scheme, and why it is no longer used,
is that tuning on one of the bands, usually 75m, was *backwards*. That
required a different tuning scale, often marked in red, and was a real
nuisance because inevitably you'd turn the knob the wrong way when
you wanted to touch up the tuning. Voice of experience talking.

>Really? I always thought 2 meter was a better band for distance than
>70cm?

Usually not. Given equal *physical* antenna sizes are used on both bands, and this is quite common for repeater antennas, and for users with dual band antennas, the antenna gains more than offset the extra "path loss". I put that in quotes because true path loss is the same in both cases, and is due to geometric inverse square spreading, but the formula for calculating path loss implicitly *assumes* a receiving antenna of constant *electrical* dimensions, IE always a halfwave. If instead we assume a receiving antenna of the same *physical* dimension, the extra path loss disappears because we are now intercepting the same amount of signal wavefront in both cases. Add in a transmit antenna of equal *physical* dimension, and we actually have more gain at the higher frequency.

Propagation is basically the same on the two bands (discounting the more exotic propagation modes), so the effectively lower path loss for UHF when using antennas of equal physical size will allow it to be usable over a greater distance. Of course if you are terrain blocked, you are terrain blocked on either band. UHF will give you slightly more multipath, however, and that can be an advantage if the direct path is blocked, IE you get there by a bounce. That's why UHF is often preferred when operating in built up urban areas.

Case in point. We have 2m and 70cm repeaters co-located at one of our sites and sharing a common dualband antenna. I can always work the 70cm repeater further away than I can the 2m repeater. And I can often hit it solidly in the downtown area when I'm noisy into the 2m machine. Both repeaters are GEs, well maintained, and with high grade duplexers.

Nor will any licensing exam weed them out. They demonstrate a level
of dedication and determination in their offensive behaviors far beyond
any hoop we can create for them to jump through. The only thing that
can deal with this is *vigorous enforcement action*. We don't have that
anymore, and we're paying the price.

It is instructive to note that Extra class licensees have a disproportionate
share of the NALs given out when the FCC was still bothering to do
enforcement. It would seem that they brought the same level of dedication
and determination to their offensive behaviors as they brought to their
Morse exams. Perhaps we should be selecting for people not quite so
compulsive.

Greetings,

I have some RS 2-way radios (headset with belt clip unit) that do not cut it for my needs.

I want to give the kids a longer leash when we go to the local science museums or to the mall. We also vacation up in the hills, and we frequently wander over a mile from the house.

Our current radios, aside from being unwieldy and conspicuous do not have the range: if we get more than 1/2 a mile we're lucky.

I've seen ads for the Motorola Talkabout Plus operating on UHF. I'd appreciate any advice or experiences using these or similar radios, as well as a place to buy them inexpensively.

Is UHF what we need, or should we be looking at other frequncies -- 2 meter would seem to be overkill?

Thanks for any advice,

Roy

I recall the same moan being made in 1934 when there were only 16,000 amateurs (see 200 Meters and Down). ARRL said we had to raise code test speeds to avoid overloading our HF phone bands. Hmm. Wasn't true then, no reason to believe it would be true today. We handle approximately 368,000 US amateurs on HF today. How could the ARRL be so wrong? Simple, they forgot technological progress. When crowding made it necessary, we adopted better receivers and more efficient operating techniques. If we could handle a 2300% increase, I don't think an increase of less than 100% would be beyond our capabilities. Sure, we may need a bit sharper receivers, we may need to clean up our overdriven and splattering transmitters, and our operating techniques may have to become a bit crisper, but we can do it.

If we're allowed to use SS, then we can make a quantum leap in band carrying capacity as great as when we switched from AM to SSB. Then we can easily accomodate 2 or 3 million US amateurs on HF. Of course such a changeover will take time, SSB didn't displace AM completely for a decade. But we are likely to have the time since antenna restrictions mean that many of those gaining HF privileges won't be able to exercise them effectively. And the reality of the demographics of currently licensed HF operators means that at least half of them will become silent keys in the next decade, so we need a large influx just to maintain replacement levels. That means the rate of growth in HF activity will actually be much slower than it would naively appear.

So all those fellows with 6m WAS certificates submitted phoney logs,
eh Cec? The County hunters are must all be liars, too! =:o

>When I got my first ham license
>there were zero hams on VHF within range of my QTH.

Well, that's understandable - in the 1930s it took quite a bit of magic
to get anything to work on VHF.

>There's only one repeater within HT/mobile range in my home town.

You can only operate on one at a time - how many more do you need?
The advantage to having just one is that all the operators in your
area surely form a tight-knit group. (I hope you're not being a bad
influence on 'em, Cec!)

> But are you quite sure these RadShack sets use FM?

Most of these low power 49 MHz Walkie-Talkies do use FM. I noticed that if you tune the big capacitor inside, you could get as much as a 10 kHz "swing." I think it may be possible to tune these to 6 meters, but for a repeater you'd need two of these-- one set on the input and one on output. Or use a seperate reciever.

You say my argument makes sense on the "surface", well so does
everything you have mentioned. So!!!

>While your argument makes sense on the surface, I wager the dropping of
>(more stringent) CW testing will not be accompanied by an increase in
>standards elsewhere in the test. I site the history of the testing program
>here as a clear example of how standards slowly, but surely drop.

There are some people that definitely fit into the catagory you
mentioned, I do not fit into that mold however. I have "credit" in
13WPM CW as I have "credit" in three semesters of college calculus. I
have no use for either one and find neither one enjoyable or usefull
and after acquiring the passing grades(so I can go on and acheive what
I really wanted) for both fields of study, have promptly let them
go. Haven't missed calculus in 25 years.

There is some truth to the fact that why know the nitty-gritty about
capacitors and resistors if there is no radio kits available to
assemble anymore? How many radios have you built lately? Or are you
running one of those high priced solid state rigs with a solid state
amp, beam rotor and all the extras?

I am not one of those that is advocating lowering standards, just
changing the testing material to something equally as challenging but
usefull for most hams on an everyday bases. You don't need to know
calculus to be a brain doctor but perhaps if you want to be a rocket
scientist.

>It has been my experience that many opposed to the CW requirement simply
>don't want to spend the extra effort, regardless of the subject. They will

>RS and buy an HT. Why should they have to learn all that irrelevant stuff?
> They aren't building radios. All they need to know are operating
>protocols and a little bit on safe operation.

See my statement above, I have credit in 13WPM and it was ugly from
start to finish.

I am not bitter about CW. Really doesn't matter one way or the other
to me about testing or not. I have acquired all the privleges I care
for. In fact any form of HF doesn't excite me anymore. Researching
VHF radio site loctions, land ownership, repeater equipment
financing,-acquistion , linking radios, finding the area of coverage
and installation interest me much more than..... making very brief HF
contacts to far off stations that sound like Donald Duck, through
static crashes, thats if the band is up or down, AND then all you get
is "you are a 59, see ya". OR someone running a big amp, with a beam
overpowering everyone and not even responding to your barefoot weak
signal. Hmmmm, lots of fun for lots of input and very little output.
To each his own.

It just kills me to hear city folk, while traveling on vacation
outside of their small world, trying to get through to a far off
repeater with their little bitty HT and wondering why they are
marginal. I might add that some of these folks are big HF-CW fans, by
listening to some of their conversations with the locals. My $0.02
worth as well.

If you want a challenge, go to a real college and get a real degree
that will land you a real job. Or climb Mt Everst.

Please tell me where would you get electric power to run your rig if
your worldwide catastrophy occured? Do you think your electrical
wall socket would still be working? Damn few hams have the capability
to operate when local power is interupted for only brief times
(floods, hurricanes, ice-snow storms etc) Get real! If your
"worldwide catastrophy" occured and I survived, radios would be my
last concern. I would be getting myself a gun and heading to the
easiest food gathering source plus acquiring shelter, fighting off
roving bands of desperate starving people etc,

Hi Hans:

I checked with Chris Imlay. The notice was a red herring or
more likely a mistake. Apparently a NPRM number was assigned
but the Proposal went back for further review (I am assuming
on or about July 29th). But, never fear, it is on the way. As
they say --- "watch for the film at 10:00".

73, Jay, K0QB

Lucky you said "likely," Bill, for you're wrong. Not a day would go by at Coast Guard Radio Honolulu without me copying a TTT, XXX, DH Medico, AMVER position report, or WX observation from a ship whose radio op knew absolutely no English. Distress calls also were no problem, regardless of which language the op knew.

The ITU's thinking is 50 years ahead of yours - provisions for differences in languages have been in place probably longer than you've been on the Good Earth.

Good thing you are not in this area. On a comparison basis I would say
giving 14,313 a run for it's money would be accurate. Noise makers,
grunters,dead keyers, all kinds of pychopaths on the Houston repeaters.
I do not consider a no-code ham any less a ham than any other. He has a
legal ticket. But I would have to say I would consider him a little less
accomplished by not knowing code. Same as anything else. I know quite a
few higher class hams that couldn't pass their present class again, and
I would think the same about them. It's not the ticket, it's what they
can or can't do that matters. MK :{

Most of my ham friends in AZ have backup systems like
solar panels and/or propane/diesel/gasoline powered
generators in addition to food, water, and weapons.
IMO, all *serious* hams have backup power.

> ...<SNIP>
> You seem to assume that the *only* alternative to a CW transmitter
> (and you keep forgetting to mention that pesky receiver that's required
> too), is a SSB transmitter. That's definitely not true.

I would argue that a regen receiver (which can be extremely selective) is no more difficult to build than a CW TX (just as an aside to this discussion, said regen receiver can demodulate CW, AM, SSB and FM - not too shabby and a wonderful entry point to receiver design!).

> A FSK transmitter
> is only trivially different from a CW transmitter, actually a tad simpler
> than a CW transmitter if you care about controlling chirp and using
> proper keying waveform shaping. And after that FSK transmitter is
> built, you can operate it immediately with that software you downloaded
> from the net
> ...<SNIP>

Yet given these stated advantages, a quick search on the web seems to turn up many more CW TX designs than FSK TX designs. If they are so simple to design/construct and so much easier to use, why do they not proliferate? BTW, as an aside, have you noticed how so many consumer PC's bleed all over the place when you're anywhere near them with a receiver?

Also, I notice how EME/Moonbounce operators employ every trick in the book - low noise head amplifiers, complex multi-element beam antennae, DSP, etc. Of course, they need to use every trick given how near the hairy limits of sensitivity they opererate. They're not luddites. Yet they still choose CW. If the digital modulation techniques you often describe are so much better, why aren't they being employed by the EME crowd? They would surely snap it up in a heartbeat if it gave them any significant advantage.

>
> Or, a microphone and a single chip and you have a FM transmitter.
> The receiver for *that* is easier to build than one for CW too.

What is the bandwidth used by an FM TX over a CW TX? Also, (and I realise this is just my personal opinion) putting something together from discrete components is, I believe, more understandable and valuable to learning than using modules. It is easy to describe the fundamental physics going on in a discrete active device and have the novice understand it. It is easiser for said novice to make meaningful tweaks to simple discrete based devices. It is much more difficult for the novice to learn the basics when using a

monolithic device.

> ...<SNIP>
> And the nice thing about the skills you develop doing any of this is that
they
> are *transferable* to other radio services and other facets of
communications.
> ...<SNIP>

All the more sophisticated modulation techniques, integrated devices, etc. are completely available now to the no-code tech. If CW is all that is stopping the flood of development and learning (which is what I believe you are implying), why do I see so little work done now by the average Tech on VHF, UHF, etc., where CW is no impediment? Why would the elimination of a CW requirement for HF suddenly free up all this currently suppressed talent?

I'm convinced that removal of the CW requirement will not be compensated by an increase in the technical requirements elsewhere in the tests. I believe it will not result in more technically oriented folk entering the game. It will be simply another dumbing down of the exams. Just look at history to see justification for my belief.

Cheers,

Chris Broadbent (KC5VQL)

We sure don't have that problem on the Madisonville, Texas repeater just
90 miles up the road.

What does a ham who only operates VHF/UHF accomplish by knowing code?
Wouldn't it be a better accomplishment to spend that time knowing
electronics?

We don't have problems like that in this area, either. I mean, let's look at something for a minute. If the code requirement is supposed to be some sort of "filter" for undesireables on the bands, then it obviously isn't doing that. Every day I hear the "Big Al and the turds" group perfom at the "75 meter cesspool." Aren't they higher classed license holders? Granted, they are a minority of operators, but going up and down the band I hear similar occurances.

As someone who currently holds a Technician license, I would remind you that CW can be used on VHF/UHF, even with no-code-tech. However, I am preparing for a VE session later this month for the code element, and studying the question pool for General. Not all Technicians are content with their priveleges. I _want_to go as high as I can in the amateur service, and do not buy into the pseudo-elitist thinking that one class of license is "better" than another.

Yes, it came from 73 magazine. They had a number of awards that were
take offs on other organizations' awards. They appeared to be legitimate
(ie you did have to send proof) but the requirements were a bit odd.
The Real Rag Chewers Club of course is a parady of the ARRL's Rag Chewers
Club, with of course a much longer time period needed for the
conversation.

The other one I remember is "Worked Almost All States" where instead
of having to work all fifty, there was a figure somewhat lower but
still close to fifty.

The Institute of Amateur Radio was basically 73. I'm still not sure
whether it was a real attempt at an organization or just a parody.
In the early sixties there really was somewhat of an organization, but
the real thing that happened was a couple of charter tours to Europe.
It sort of faded away, but the name was still there to issue the
certificates in the early seventies.

hi-hi! You know what I mean, the people that think that just because they have a higher class license they are a little bit better than those with a lower class license.
I'm active in Skywarn, Races/Ares, so Technicians can make a difference in the community, unlike the QRMers I have heard.
As you move up, the ladder you do gain more privleges, but some of the antics of those higher class license holders makes one wonder.

well, the arrl has first-level responsibilities in identifying
offenders via the part 97 provisions involving the amateur auxillary.
in other words, the arrl can, but won't.

the fcc has had it's enforcement activities for part 97 defunded.
that is a legislative issue. every time more funding for enforcement
has been amended or proposed, it either never reaches a vote on the
floor of house or senate, or it gets voted down by the right wing
majority.

the answer is to do three things:

1). Streamline the red-tape in the enforcement process. Too many
appeals, and other bs allowed to gum up the works. evidence in the
cases of serious offenders should be enough.

2). Elect a congress that will fund enforcement activities on the part
of the fcc. This is the only way this will happen. The "R"'s have
a track record of not funding regualtory enforcement of any kind.
About time we got some in who will. Where there is a lack of will
to enforce the law, you have lawlessnes.

3). GET THE ARRL OUT OF PART 97 ENFORCEMENT PROVISIONS!!! the arrl is
living proof that the fox cannot be trusted to guard the henhouse.

For the cost of one F-22, we can get the bands cleaned up. $50
million. There will be around 8-10 thousand of these planes ordered
over the next ten to fifteen years to replace aging F-16's and
F-14's. We need to maintain our military, and I use this as one

example of a source for funding, not as an end-all source.

Also about the same cost as the biggest fishing expedition in political history [Starr], and the only thing to show for that 50 million is MAYBE a blow-job.

Cleaning up the bands, and keeping them clean is worth that much.

It could be cheaper, but the Republicans defunded, had decommissioned, and sold, the majority of the monitoring facilities. Partially because of the league's insistance that the fox could indeed guard the henhouse.

I am voting for common-sense Truman democrats. There are no liberals left. Now we need to get rid of the Fascist right-wing. I don't care how you vote, so long as we all kick the right[wrong]-wing out of congress [although I will suggest you vote democratic. read the congressional record, you might agree].

Don't just vote on one issue, such as abortion. As a catholic, Marconi was against abortion. As a person, he was Musilini's [sp?] right hand man, and came to America originally to recruit fascists.

One thing is clear though, the current majority in Congress MUST be voted out of office in order for enforcement to happen again under Part 97, they have clearly, and multiple times shown that they are unwilling to.

If you are just YARWW [Yet Another Right Wing Whacko], I may be just talking to a brick wall here, but at least I hope you research what I am saying, because the facts speak for themselves here.

Exactly my feelings. I believe it would be far more beneficial to ham
radio for people to learn more electronics than Morse code. I've been stuck at
10wpm for 2 years now. Just because I can't do 13 I can't get my general.
Yhea, that's fair alright.

FOR SALE:

ICOM T8A TriBand HT
6M/2M/440 (MOD was done so it also has 220MHz)
Extended receive...it does pick up 800MHz too!

Hardly used, bought brand new in 6/98.
All boxes, manual, plastic, battery, charger..everything original

Will sell for $250.00 (that includes shipping)

Call 423-450-3198 and ask for Dan if interested.

Serious inquiries only.

From Tad Cook, K7VVV
Seattle, WA August 7, 1998
To all radio amateurs

SB PROP ARL ARLP032
ARLP032 Propagation de K7VVV

Solar activity was up a bit for the month of July after being flat for several months. Average solar flux took a jump earlier in the year, from 93.4 for both January and February to 109.1 for March, 108.3 for April, 106.7 for May and 108.5 for June. Average solar flux for July was 114.1. A year ago the average solar flux for July, 1997 was 71.4.

Toward the end of each of the past few weeks there has been a great geomagnetic disturbance on Thursday or Friday, and this week is no exception. July 16 saw a planetary A index of 37, it was also 37 on July 23, it was 33 on July 31. On August 6 it was all the way up to 69, indicating a severe storm. The cause of this latest upset was probably a well placed coronal hole or mass ejection, and the excitement should continue for a few days, along with very high solar flux. Flux values on Thursday were 138.3, and solar flux is expected to climb over the next few days, Friday through Sunday, to 145, 150 and 150. The last time the solar flux reached 150 was over five years ago on March 11, 1993.

The planetary A index for the same three days is predicted to be 30, 18 and 10, so HF conditions could be really good by the end of the weekend. Don't forget that when conditions are bad on HF due to geomagnetic storming, auroral skip could be causing great excitement on VHF.

NASA released some encouraging news about the SOHO spacecraft this week after finally establishing radio contact on Monday. Although it is doubtful whether SOHO will ever again be a rich source of solar data, the NASA Deep Space Network has been able to consistently track the craft over the past few days as it sends 10 second carrier bursts in response to NASA commands.

Sunspot Numbers for July 30 through August 5 were 69, 107, 74, 121, 112, 80 and 85 with a mean of 92.6. 10.7 cm flux was 114.8, 113.7, 112.1, 109.6, 108.5, 115.8 and 126.8, with a mean of 114.5, and estimated planetary A indices were 12, 33, 15, 8, 6, 9, and 9, with a mean of 13.1.

Here are some path projections for the European CW DX Contest this weekend, using some optimistic numbers for Sunday.

From Boston to Europe, 80 meters looks good from 2330-0500z, peaking around 0200-0330z. Check 40 meters from 2200-0630z, peaking from 0030-0400z. 20 meters looks good around the clock, with the best period from 2200-0230z and the worst around 0800- 0900z. Check 15 meters 1300-2300z.

For Miami, 80 meters looks good 0000-0500z, 40 meters 2330-0600z, 20 meters 1900-0230z, 0400-0700z, and around 1030-1200z. Check 15 meters around 1300-2330z, with best conditions around 1700-2200z.

From Nashville, TN, check 80 meters 0030-0430z, 40 meters 2345-0600z, 20 meters 1930-0200z, and 15 meters with some chance of opening during daylight hours.

From Utah 80 looks good 0245-0400z, 40 from 0200-0530z, 20 from 2030-0800z (with best conditions around 0100-0200z and 0430-0530z) and 15 around 2030-2200z.

From Los Angeles check 80 around 0330z, 40 around 0230-0530z, 20 around 2200-0800z and 15 around 0630-0700z.

Some additions to Gary's posting:
40 also is LSB for the same reason (subtractive mix), so both 75/80 and
40 tuned backwards. And since hams want somebody - anybody? - to
answer back to a CQ, it pays to have all stations on the same sideband.
Not many hams, including OTs, can copy a weak DX signal on sideband
upside down.

That said, the wet branch of DoD traditionally ran ISB with voice USB
and RTY on the LSB, mark high. Of course this was done with hybrid
technology, not microprocessors. The URC-32 was a six foot rack chock
full of heat, rated 100W PEP from 2-30 MCs. THe 3 kW amp was smaller!

How is saying what you've said above any different from someone stating
they have an Extra Class license? You apparently feel proud of your
public service work; many Extras also feel proud of passing every test
that is offered. Don't condemn them for reaching the top rung of the
ladder and wanting to flaunt that status. (BTW, RACES and ARES are
acronyms - please write them as such.)

>so Technicians can make a difference in the
>community, unlike the QRMers I have heard.

But you have no idea of the backround of those operators - they too might
be active in public service.

Please state the actual Part 97 section number and paragraph in which
"ARRL" and "enforcement" are mentioned.

Auxillary members are volunteers - they have no enforcement power
what so ever; all they can do is collect evidence and forward it
on to the FCC.

Throughout its history, the League has never wanted to be in enforcement -
they've *always* left that role to the government.

From what you've written below, it's obvious you've lost it, OM:

> Exactly my feelings. I believe it would be far more beneficial to ham
>radio for people to learn more electronics than Morse code.

Amateur radio can be partitioned into two major catagories: Technical
and operating. Knowledge of electronics won't help much with on-the-air
procedures, Tom. But knowing code includes you in the fold with the
rest of the world's HF-licensed hams and the single mode they all have
in common. As a communicator you surely realize the importance of having
a mode in common with all other HF hams on this planet, yes?

>I've been stuck at 10wpm for 2 years now. Just because I can't do 13 I
>can't get my general. Yhea, that's fair alright.

It's not fair that I should have to sit at a red signal light when there
is no cross-traffic for miles in either direction, but it's the law.

If you've earned your Tech+, then get on the air! Your code speed will
rapidly increase overnight.

Regarding the US Amateur Radio license restructuring proposal by the ARRL:

I am currently a General class licensee, and an ARRL member. I obtained my General upgrade this past January. Prior to this, I was a Tech Plus licensee for around ten years, and a Novice before that for two years.

I was tuning across the 40m band last week, and overheard several Advanced and Extra licensees bemoaning the proposal, bleating about how they have already resigned their V.E. status and quit the ARRL. This is stupid! How I wished the discussion were being held in the General sub-band, so some opposing viewpoints could be heard.

I think the existing license structure is flawed. Disallowing Tech Plus operators HF voice below 28 MHz is to prevent them from talking to those who would encourage them to upgrade. This effectively cuts off the Tech Plus from most of the HF community, and has driven a wedge between two large segments of the amateur population. The US code requirements are out-of-line with the rest of the world. I know of many skilled Tech Plus operators who have either sold off their HF equipment, or have quit the hobby entirely - a shame. Clearly, somthing needs to be done.

In attempting to solve the problem, the ARRL may have gone a little too far. For instance, I am concerned that giving a Novice what amounts to a General ticket will remove any incentive to upgrade. Novices and Tech Plus operators should have to pass the General written elements BEFORE getting those HF voice privileges. However, the only alternative to the ARRL's proposal may be to maintain the status quo for many more years, and that is completely unacceptable. I understand that last month, only THREE novice tickets were issued.

Ever demonstrate low band DX to kids? When you make a phone contact, they can hear and understand what is going on. WOW! You're really talking to someone in Russia or the Canary Islands... COOL! Make the same contact in CW and they are lost. CW is alien, and appears to be a formidable obstacle to most people, regardless of the reality. Yes, we're a society of instant gratification - get over it...

Amateur Radio is losing steam and must be revitalized to offset new and exciting modes of communication that have no license requirements (i.e. the ubiquity of the Internet and cellular telephones). Our government has demonstrated a willingness to auction off underutilized radio spectrum to the highest bidder. If there aren't enough amateurs to justify and defend our frequency allocations, they will certainly be diminished.

Does anyone really think "lowering the standards" to 5 WPM code for HF phone privileges will result in a massive influx of CB-type operators? I don't think so! Rather, people with a genuine interest in radio will be given a chance to experience the thrill of making their first DX phone contact. Personally, I think we should retain the Novice, but add Novice HF phone sub-bands in 80, 40 and 20 meters, and dump the Extra Class. (Asbestos underwear on! ;v)

I think the ARRL proposal will go a long way toward increasing public awareness of, and interest in our hobby. I am all for it... YES!

Regards,
Michael Borowiec, N9EUZ

669. ARLB055 FCC's streamlining proposals due out soon!

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-07 00:00:00 UTC
From: w1aw@arrl.org

SB QST @ ARL $ARLB055
ARLB055 FCC's streamlining proposals due out soon!

ZCZC AG55
QST de W1AW
ARRL Bulletin 55 ARLB055
From ARRL Headquarters
Newington CT August 7, 1998
To all radio amateurs

SB QST ARL ARLB055
ARLB055 FCC's streamlining proposals due out soon.

The ARRL has learned that the FCC very likely will release its anxiously awaited ''streamlined'' Part 97 Amateur Service proposals sometime during the week of August 10. The document, part of the Commission's 1998 Biennial Regulatory Review, was adopted July 29, but it's undergoing some last-minute tweaking prior to public release. Editorial fine tuning like this following FCC adoption of a document is part of the normal process and not considered unusual.

Details of the FCC's license restructuring or Morse code testing proposals still are not available. The Notice of Proposed Rulemaking (NPRM) will carry WT Docket No. 98-143. It's expected that the FCC will use the NPRM to respond to some outstanding amateur rules-related petitions, including RM-9196, which proposed changes in the administration of CW tests to handicapped individuals. The ARRL will release details of the NPRM via a W1AW bulletin and on the ARRLWeb (http://www.arrl.org) as soon as the information is available. It's expected that the FCC will post the complete set of proposals on its Web site, http://www.fcc.gov.

Word is that the FCC will provide an extended period--something longer than the typical 30 days--for the amateur community to voice its comments on the proposals, and additional time also will be provided for reply comments. The ARRL released its own Amateur Radio licensing restructuring plan last month.

For one thing, I am not putting on psuedo-elitist airs and think I am better than others. Yes, I _am_ proud of the fact that I aced the Novice element and only missed a couple of questions at the most on the Technician Element. I didn't "memorize" the answers, I knew the material. I have some previous background in Electronics. Say, Jeff, did you ever sit for a _Commercial_ ticket in front of an FCC examiner? I have done so, and maintained a commercial ticket so, until now, I haven't mentioned that particular fact. I don't _need_ to flaunt it, because it would be better, in my view, to show that you have an Extra Class, for example, by helping even a Technician, giving him some encouragement, instead of putting one down because he is a "no-code tech." It would seem the stereotype doesn't fit the mold in _some_cases.
BTW, Jeff, this is America, and I will write any way I please.

>>so Technicians can make a difference in the
>>community, unlike the QRMers I have heard.
>
>But you have no idea of the backround of those operators - they too might
>be active in public service.
>
>Jeff KH2PZ

Again, you have really no "background" (backround sounds like someplace I _don't want to go) on me, except what I let you know. I a fully aware that hams of all classes are involved with public service. I take exception to the insinuation otherwise. I am against the snobbishness of _some_, not all. But, hey, if the shoe fits....
And to stay on topic, I would _rather_sit for the 13 wpm Element 1B, which I

will do in the near future, I'm also learning the General theory, so if I was a slacker, I'd wait and see if the ARRL (Yes, I'm a member) proposal is successful with the FCC. I personally don't think it will be.
Later,

KC8JBO EM99

IN THIS EDITION:

* +FCC's "streamlining" proposal imminent!
* +"Virtual" DXpedition set
* +World Amateur Radio Day set for September 19
* +No SAREX, but Walter is back
* +Guatemalan hams seek public support
* DARA announces scholarship winners
* Solar update
* Jud Whatley, W4NZJ, SK
* IN BRIEF: This weekend on the radio;
Correction; VBX-2 to launch; Texas hams
help in power emergency; WA0MRB is Iowa bar
president; Letter 49, where are you?; Worked
All RAC Award; Highest 6-meter beacon?; Korean
commemorative call signs; Amateur Radio growing
in VK-land; Ham-Astronomer elected to National
Academy of Sciences

+Available on ARRL Audio News

FCC's "STREAMLINING" PROPOSAL DUE OUT SOON!

The ARRL has learned that the FCC very likely will release its anxiously awaited "streamlined" Part 97 Amateur Service proposals sometime during the week of August 10. The document, part of the Commission's 1998 Biennial Regulatory Review, was adopted July 29, but it's undergoing some last-minute tweaking prior to public release. Editorial fine tuning like this following FCC adoption of a document is part of the normal process and not considered unusual.

Details of the FCC's license restructuring or Morse code testing proposals still are not available. The Notice of Proposed Rulemaking (NPRM) will carry WT Docket No. 98-143. It's expected that the FCC will use the NPRM to

respond to some outstanding amateur rules-related petitions, including RM-9196, which proposed changes in the administration of CW tests to handicapped individuals. The ARRL will release details of the NPRM via a W1AW bulletin and on the ARRLWeb (http://www.arrl.org) as soon as the information is available. It's expected that the FCC will post the complete set of proposals on its Web site, http://www.fcc.gov.

Word is that the FCC will provide an extended period--something longer than the typical 30 days--for the amateur community to voice its comments on the proposals, and additional time also will be provided for reply comments. The ARRL released its own Amateur Radio licensing restructuring plan last month.

"VIRTUAL" DXPEDITION SET

The Prairie DX Group out of the Chicago area plans to conduct the first-ever DXpedition to post near real-time logs on the Internet when it operates later this month as FP/N9PD from Miquelon Island. Miquelon is part of the French province of St Pierre et Miquelon, located south of Newfoundland, Canada. Logs will be updated on http://www.prairiedx.com. The club's move could minimize the urge for stations to seek "insurance contacts."

"We've got seven excited guys going there," said the group's spokesman, Fred Levinson, KF9YL. Levinson says FP/N9PD will update logs via a live Internet connection "every minute or so" during the group's stay. The well-publicized VK0IR DXpedition to Heard Island a couple of years ago was the first to make wide use of the Internet, including the ability for stations to check see if they were "in the log." But it typically took a day or so before logs were uploaded so stations could check.

The group plans a multi-transmitter, 'round-the-clock operation from August 26 until September 2, SSB, CW and RTTY on all HF bands. Levinson says the group may get in some 6-meter operation as well. The FP5XAB/B on 50.038 MHz has been audible in several East Coast locations in recent weeks, but there are few active operators on "The Rocks" as some locals call St Pierre et Miquelon.

Levinson said the group will be equipped with various vertical and dipole antennas--including a Comtek vertical array for 20 meters--and at least one linear amp.

"For the first time, hams and non-hams around the world will have the opportunity to view and study the activities of a DXpedition as they happen," the group's press release declared. Levinson said the group hopes to also attract some nonamateur interest in the DXpedition and to generate some publicity for the hobby.

Levinson said the trip has been in the planning for nearly a year. All of those going are first-time DXpeditioners who wanted to get their feet wet in a relatively easy-to-reach exotic location. In addition to Levinson, the traveling team includes ARRL RF Safety Committee Chairman Greg Lapin, N9GL; Karl Schmitt, AA9MN; Rick Royston, KF9ZZ; Todd Benson, W9YK; Rajiv Dwean, N2RD; and Mike Wolfe, N9WM. Staying home to support the DXpedition will be Don Whiteman, KK9H; Matt White, KB9RUR; and Irv Hazard, AA9QD. Levinson said

the group hopes the Miquelon trip will be a "stepping stone" for future club DXpeditions.

Miquelon has been the site of several DXpeditions, most of them operating from the Motel de Miquelon, which has become used to having ham radio operators as guests. The Prairie DX group has reserved about half of the beachfront motel's rooms for their stay. They've arranged for a special telephone line (rooms do not have phones) for their Internet connection.

QSLs for the FP/N9PD operation go to N9PD, Prairie DX Group, 1206 Somerset Ave, Deerfield, IL 60015 (SASE, IRC or $1 encouraged) or via the QSL bureau. For more information, contact Fred Levinson, KF9YL, e-mail efl@interaccess.com.--thanks also to Jean Pierre Carrere, FP5CJ

WORLD AMATEUR RADIO DAY SET FOR SEPTEMBER 19

"Communicating Worldwide for Three Quarters of a Century" is the theme of this year's World Amateur Radio Day, set for September 19. The event marks the first two-way transoceanic Amateur Radio contact between French station 8AB and American stations 1XAM and 1MO on November 27, 1923.

The historic contacts ushered in the era of worldwide shortwave communication.

IARU Region One broadcast a special program on shortwave that traces the early history of shortwave communication and the contributions hams have made to the development of radio science and the understanding of HF propagation.

The program will air to North America on September 19 at 2100 UTC on 15205 kHz.

For more information, contact Hans van de Groenendaal, ZS5AKV, e-mail hans@intekom.co.za.

NO SAREX, BUT WALTER IS BACK!

While the Space Amateur Radio EXperiment (SAREX) payload won't be aboard the shuttle flight that carries US Sen and astronaut John Glenn into space this fall, renowned former TV newsman Walter Cronkite, KB2GSD, will be back in the anchor chair for the historic flight.

Cronkite, who's 81 and retired from his long-held anchor position at CBS in 1981, will report on Glenn's return to space for CNN. Cronkite, who anchored Glenn's original 1962 space mission, will be joined at the anchor desk for the October 29 launch and November 7 landing by CNN's John Holliman. Cronkite also will contribute to coverage of Glenn's nine-day mission aboard the space shuttle Discovery.

Two hams--US Astronaut Scott Parazynski, KC5RSY, and European Space Agency astronaut Pedro Duque, KC5RGG, of Spain--will be among an international crew aboard STS-95.--thanks to ShopTalk

GUATEMALAN HAMS SEEK PUBLIC SUPPORT TO RETURN LOST BANDS

The Amateur Radio Club of Guatemala (Club de Radioaficionados de Guatemala--CRAG) has issued "a call to the public conscience" as part of its effort to get the Guatemalan government to restore access to UHF and SHF bands to hams. In 1996, the Guatemalan Congress eliminated 40% of the Amateur Radio frequencies including the formerly shared 430 to 440 MHz band and SHF bands. The spectrum has been sold for commercial use.

Reports from that Central American nation indicate that commercial land mobile stations are now being licensed in the 70-cm band. CRAG and amateur satellite interests elsewhere in the world worry that the commercial stations and existing amateur satellite operations will not be able to comfortably co-exist in the band. Amateur satellites operate between 435 and 438 MHz.

According to CRAG, the Guatemalan government has so far ignored its objections that the frequencies should be reserved for ham use in accordance with ITU radio regulations. CRAG already has presented a formal request to the Guatemalan Ministry of Communications to restore 430 to 440 MHz to Amateur Radio use but says the government has not responded to its pleas.

In a statement, CRAG expressed concerns that the commercial activity at 70 cm would cause interference to neighboring countries. "A commercial communication service is incompatible with the Amateur Radio Service," CRAG said. CRAG also worried that the commercial activity would strain relations with other countries, and that Guatemalan hams would not be able to take part in future space and satellite communication, including the International Space Station.

Beyond that, CRAG said, eliminating the 70-cm band in Guatemala "also discards its beneficial use for thousands of Guatemalans in case of natural disasters and emergencies."

Further north, Mexican authorities last year auctioned spectrum at 440 to 450 MHz and 485 to 495 MHz--currently all or part of TV channels 16, 17 and 18--for "fixed or mobile wireless services." Gina Dalma of the Mexican Federal Telecommunications Commission (COFETEL) says five fixed-wireless service licenses were offered in those bands; another four (for what she called "national footprint") already are held by Iusacell (Bell Atlantic).

COFETEL's 1998 auction plan indicates intentions to auction 148-174 MHz and 450-470 MHz for "private communication systems" on the state level.

DARA ANNOUNCES SCHOLARSHIP RECIPIENTS

The Dayton Amateur Radio Association has announced its 1998 scholarship winners:

James P. Born, KB8HIP, Kenton, Ohio has been awarded the Robert F. Zimmerman Memorial Scholarship. He has been accepted at the University of Toledo and plans to study mechanical engineering; Michael Gossenauer, N0UNY, Aurora, Colorado. He attends the University of Colorado studying biology and pre-medicine; Adam F. Henry, KC8DDO, Mt Sterling, Ohio, has been awarded the Charles G. Fry Memorial Scholarship. He has been accepted at DeVry Institute of Technology and plans to study electronics; and Adam Brian P. Letendre,

KE6IRJ, Big Bear City, California. He has been accepted at Embry-Riddle Aeronautical University and plans to study aeronautical science.

Also: Colleen A. Loeffler, KB8QGX, Medina, Ohio. He has been accepted at the University of Akron and plans to study elementary education; Jessica S. Reinhardt, KD6ARA, Agoura Hills, California, has been awarded the Dave Beam Memorial Scholarship. She has been accepted at Sonoma State University and plans to study communications; Melissa Schweikhart, KB8EPO, Springboro, Ohio, has been awarded the John Willig Memorial Scholarship. She attends Vanderbilt University and plans to major in biology and pre-medicine; David L. Sellars, N8WAE, Perrysburg, Ohio, has been awarded the Frank Schwab Scholarship. He has been accepted at Southwest Missouri State University and plans to study computer science; and Erin M. Swaney, N3MGY, Mifflinburg, Pennsylvania. She has been accepted at Indiana University and plans to study in the field of chemistry.

"We regret that we cannot award scholarships to all of those who applied; however, we do extend to you our wishes for every success in your chosen endeavor," said DARA Scholarship Chairman Stan Kuck, NY8F

SOLAR UPDATE

Sun watcher Tad Cook, K7VVV, Seattle, Washington, reports: Solar activity was up a bit for the month of July after being flat for several months. Average solar flux took a jump earlier in the year, from 93.4 for both January and February to 109.1 for March, 108.3 for April, 106.7 for May and 108.5 for June. Average solar flux for July was 114.1. A year ago the average solar flux for July, 1997 was 71.4.

Toward the end of each of the past few weeks there has been a great geomagnetic disturbance on Thursday or Friday, and this week was no exception. July 16 saw a planetary A index of 37, it was also 37 on July 23, it was 33 on July 31. On August 6 it was all the way up to 69, indicating a severe storm. The cause of this latest upset was probably a well-placed coronal hole or mass ejection, and the excitement should continue for a few days, along with very high solar flux. Flux values on August 6 were 138.3, and solar flux is expected to climb over the next few days, August 7 through August 9, to 145, 150 and 150. The last time the solar flux reached 150 was more than five years ago--on March 11, 1993.

The planetary A index for the same three days is predicted to be 30, 18 and 10, so HF conditions could be really good by the end of the weekend. Don't forget that when conditions are bad on HF due to geomagnetic storming, auroral skip could be causing great excitement on VHF.

NASA released some encouraging news about the SOHO spacecraft this week after finally establishing radio contact on Monday. Although it is doubtful whether SOHO will ever again be a rich source of solar data, the NASA Deep Space Network has been able to consistently track the craft over the past few days as it sends 10-second carrier bursts in response to NASA commands.

Sunspot numbers for July 30 through August 5 were 69, 107, 74, 121, 112, 80, and 85, with a mean of 92.6. The 10.7-cm flux was 114.8, 113.7, 112.1,

109.6, 108.5, 115.8, and 126.8, with a mean of 114.5. The estimated planetary A indices were 12, 33, 15, 8, 6, 9, and 9, with a mean of 13.1.

Here are some path projections for the Worked All Europe CW Contest this weekend, using some optimistic numbers for Sunday:

From Boston to Europe, 80 meters looks good from 2330-0500 UTC, peaking around 0200-0330 UTC. Check 40 meters from 2200-0630 UTC, peaking from 0030-0400 UTC. 20 meters looks good around the clock, with the best period from 2200-0230 UTC and the worst around 0800-0900 UTC. Check 15 meters 1300-2300 UTC.

For Miami, 80 meters looks good 0000-0500 UTC, 40 meters 2330-0600 UTC, 20 meters 1900-0230 UTC, 0400-0700 UTC, and around 1030-1200 UTC. Check 15 meters around 1300-2330 UTC, with best conditions around 1700-2200 UTC.

From Nashville, Tennessee, check 80 meters 0030-0430 UTC, 40 meters 2345-0600 UTC, 20 meters 1930-0200 UTC, and 15 meters with some chance of opening during daylight hours.

From Utah 80 looks good 0245-0400 UTC, 40 from 0200-0530 UTC, 20 from 2030-0800 UTC (with best conditions around 0100-0200 UTC and 0430-0530 UTC) and 15 around 2030-2200 UTC.

From Los Angeles check 80 around 0330 UTC, 40 around 0230-0530 UTC, 20 around 2200-0800 UTC and 15 around 0630-0700 UTC.

JUDSON F. "JUD" WHATLEY, W4NZJ, SK

Jud Whatley, W4NZJ, of Snellville, Georgia, died July 28. He was 53. Licensed since 1958, Whatley was an ARRL member and a very active amateur in the Georgia section. He served as an ARRL Affiliated Club Coordinator and often spoke at various club gatherings.

Georgia Section Manager Sandy Donahue, W4RU, said Whatley will be sorely missed and hard to replace. "Jud was a backbone of my cabinet. I will miss him greatly," Donahue said. "He fought tirelessly and successfully the attempt of Gwinnett County to impose severe tower restrictions on the cellular industry without exempting ham towers." Whatley was past president of Chapter 49, Peach State chapter of QCWA and a candidate for the QCWA Board of Directors at the time of his death. He was a active member of his local club, the Gwinnett Amateur Radio Society (GARS), the largest club in Georgia, and involved in Sci-Trek, a local science museum for children and youth and the home of club station W4WOW (Whatley described his involvement in an article appearing in the August issue of Worldradio). He's also credited with starting the Southeastern 6-meter Net.

His wife, Mary, WB4ALU, is among his survivors. Services were August 2 in Snellville. Interment was at the VA National Cemetery in Marietta, Georgia.-thanks to Sandy Donahue, W4RU, and Cliff Segar, KF4DZV

IN BRIEF:

* This weekend on the radio: The Maryland-DC QSO Party and the Worked All Europe DX Contest (CW) are this weekend. Just ahead: The ARRL 10 GHz and up Cumulative Contest (see June QST, page 87), the New Jersey QSO Party, the North American QSO Party (SSB), the SARTG RTTY Contest, the W/VE Islands Contest, and the SEANET Contest (SSB) all are August 15-16. See August QST, page 105, for more information.

* Correction: The correct call sign of John Hayward who spotted and called in a forest fire in the Stanislaus National Forest via ham radio is KM6LE. We listed it incorrectly in our story, "Noon Time Net helps fight forest fire," in The ARRL Letter, Vol 17, No 30.

* VBX-2 to launch: Vernon Balloon Experiment 2 (VBX-2) will be launched August 8, 1998, from Vernon, British Columbia, Canada. Launch time is 1930 UTC. A similar balloon package last year carried a crossband 70 cm in/2 m out repeater. VBX-2 will include a similar package as well as an APRS beacon on 144.39 MHz and will be trackable online via http://www.aprs.net. For more information, visit the VBX Web site, http://www.junction.net/norac/vbx, or contact VBX-2 balloon coordinators, Wilf Mulder, VE7OHM, e-mail gwmulder@junction.net or Michael Illingby, VE7TFD, e-mail michaeli@junction.net, in Vernon or VBX-2 APRS/GPS coordinators Tino Sarro, VE6SZR, e-mail ve6szr@rac.ca, or Dale Grant, VE6CPK, e-mail ve6cpk@rac.ca in Calgary.

* Texas hams help in power emergency: Hams helped save the day after a power outage June 13 shut down the city of Lubbock, Texas. According to the Lubbock Avalanche-Journal, 15 hams arrived at the American Red Cross to help take refreshments to nearly 80 police officers who were directing traffic at intersections throughout the city in 100-degree heat. Ham radio remained one of the only functional means of communication during the blackout and was used to coordinate the relief effort.--thanks to Don Edwards, K5EL

* WA0MRB is Iowa bar president: David D. Beckman, WA0MRB, has been installed as the 125th president of the 7400-member Iowa State Bar Association. Beckman, 48, coauthors a technology column in The American Bar Association Journal.

* Letter 49, where are you? The US Postal Service reportedly is testing a system to track mail by means of tiny radio devices inside ordinary-sized letters. The device periodically turns on and listens for a signal from a sensor. If it hears the signal, it transmits information about its origin, current location, and ultimate destination.--New York Times via QNews

* Worked All RAC Award: Radio Amateurs of Canada (RAC) has announced its new Worked All RAC (WARAC) Award. The new award, which became effective July 1, is available to all amateurs worldwide. A certificate will be issued to any amateur who confirms two-way communication with an Official RAC Station using the RAC suffix in at least 10 of the 13 Canadian prefixes--VE1, VA2, VA3, VE4, VE5, VE6, VE7, VE8, VE9, VO1, VO2, VY1, VY2. For more information, see http://www.rac.ca/warac.htm An application form also is available at http://www.rac.ca/awapp2.htm

* Highest 6-meter beacon? Ramon, XE1KK, was not satisfied with having a beacon at a mere 3000 meters, so he recently installed his beacon at the 4000 meter level of the Popocatepetl active volcano east of Mexico City. Ramon reported thick smoke spewing from the volcano as he was installing the beacon. The exact elevation reported by Ramon is 13,123 feet. Is this the worlds highest beacon ? The beacon is on 50.023 with 20 W into a Ringo Ranger. The grid square is EK09qc. Jack Henry, N6XQ, reports hearing the beacon weakly in San Diego.--Jack Henry, N6XQ

* Korean commemorative call signs: To commemorate the 50th anniversary of the Republic of Korea, amateur stations in Korea will be permitted to substitute the number 50 for the usual call sign number. For example, HL1AAA would be permitted to operate as HL50AAA.--Korea Amateur Radio League

* Amateur Radio growing in VK-land: Amateur Radio "Down Under" grew slightly during the first four months of this year, according to figures supplied by the ACA, the Australian's equivalent of the FCC. The Wireless Institute of Australia reports the number of hams in Australia rose from 15,901 to 15,941 between January and April. The biggest growth was in the lowest and highest license classes, Novice Limited and Unrestricted respectively. Australia has five license classes.

* Ham-Astronomer elected to National Academy of Sciences: James M. Moran, K1AKE, of Concord, Massachusetts, has been elected to the prestigious National Academy of Sciences. Moran is a radio astronomer at the Harvard-Smithsonian Center for Astrophysics and a professor at Harvard University. He was one of 60 new members announced on April 28. Moran is best known for his application of the techniques of Very Long Baseline Interferometry (VLBI) to the study of astronomical masers. Masers are the radio equivalent of lasers. VLBI allows astronomers to image celestial objects at a level of detail unmatched by any other technique. Moran credits amateur radio with starting him on his career path. Encouraged by his father, James M. Moran, Sr, W1QUO, Moran was first licensed at the age of 13. At his dad's suggestion, Moran built a radio telescope for a high school science-fair project. With a World War II-surplus military 430 MHz downconverter, a Hallicrafters SX-100 HF receiver and a 6-foot-long helical antenna, he detected radio emissions from the sun and won the top prize in the science fair. A graduate of Notre Dame and MIT, Moran authored more than 160 research papers and is co-author of a widely-used radio astronomy textbook.

==========

The ARRL Letter is published by the American Radio Relay League, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259. Rodney J. Stafford, W6ROD, President; David Sumner, K1ZZ, Executive Vice President.

Circulation, Kathy Capodicasa, N1GZO, e-mail kcapodicasa@arrl.org.
Editorial, Rick Lindquist, N1RL, e-mail elindquist@arrl.org.

Visit the ARRLWeb page at http://www.arrl.org.

The purpose of The ARRL Letter is to provide the essential news of interest to active, organizationally minded radio amateurs faster than it can be

disseminated by our official journal, QST. We strive to be fast, accurate and readable in our reporting.

Material from The ARRL Letter may be reproduced in whole or in part, in any form, including photoreproduction and electronic databanks, provided that credit is given to The ARRL Letter and The American Radio Relay League.

==>How to Get The ARRL Letter<==

The ARRL Letter is distributed directly from ARRL HQ only to elected League officials and certain ARRL appointees and to paid subscribers of the now-defunct hard-copy edition of The ARRL Letter. For members and nonmembers alike, The ARRL Letter is available free of charge from these sources:

* The ARRLWeb page (http://www.arrl.org/arrlletter/). This version of The ARRL Letter includes any photographs. (NOTE: The ARRL Letter will be posted as soon as possible after publication. Please be patient.)

* The HIRAM BBS: 860-594-0306. (NOTE: The ARRL Letter should be available via the HIRAM BBS no later than the Monday after the date of publication.)

* The ARRL Technical Information Server (InfoServer): Send an e-mail message to info@arrl.org. The subject line should be blank. In the message body, type "send ltrmmdd.txt", where mm represents two digits for the month and dd represents two digits for the day (The ARRL Letter is published every Friday). For example, to request The ARRL Letter file for Friday, January 3, 1997, you'd type "send ltr0103.txt". Then, on a separate line, type "quit". (NOTE: The ARRL Letter should be available via the InfoServer no later than the Monday after the date of publication.)

* The Netcom server, run by the Boston Amateur Radio Club and Mike Ardai, N1IST: Send e-mail to listserv@netcom.com (no subject needed). The body of the message should say "subscribe letter-list".

* CompuServe and America Online subscribers, as a downloadable text file in the services' ham radio libraries.

Had 2 of these radios that did the same thing, replacing the microphone
cured all.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 07/2330Z AUGUST 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 07 AUGUST AND FORECAST FOR 08 AUGUST - 10 AUGUST
STATUS INDICATORS SOL:** YELLOW ** MAG:GREEN ION: GREEN

1A. SOLAR SUMMARY
Activity 07 Aug: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 07 Aug: 145/99

GOES satellite data for 06 Aug
Daily Proton Fluence >1 MeV: 5.0E+05
Daily Proton Fluence >10 MeV: 1.4E+04
Daily Electron Fluence >2 MeV: 2.30E+05 (normal)
X-ray background: B3.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
08 Aug 09 Aug 10 Aug
Activity Low to moderate Low to moderate Low to moderate
Fadeouts Probable Probable Probable

Forecast 10.7 cm flux/Equivalent Sunspot Number for 08 Aug: 150/105
COMMENT: Isolated M class flaring expected.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 07 Aug: Unsettled to active

Estimated Indices 07 Aug : A K
Learmonth 16 4433 4222
Fredericksburg 18
Planetary 39

Observed Indices 06 Aug : A K
Fredericksburg 43
Planetary 69 2468 7435

2B. MAGNETIC FORECAST
Date Ap Conditions
08 Aug 10 Unsettled
09 Aug 6 Quiet to unsettled
10 Aug 6 Quiet to unsettled
COMMENT: Geomagnetic activity is expected to return to quiet

to unsettled levels. Recurrence suggests active conditions on
12 August.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
07 Aug Normal Fair-Normal Poor-Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
08 Aug Normal Fair-Normal Fair
09 Aug Normal Normal Normal
10 Aug Normal Normal Normal
COMMENT: HF conditions are expected to continue to improve as
day progresses.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
07 Aug 61

Observed Australian Regional MUFs:
Darwin: depressed 15-30% during local daylight hours.
Other sites mildly depressed (15%) during local daylight hours.
Strong spread F was observed during local night
hours, southern region.

Predicted Monthly T index for August: 83

Hi John, What I found out in reading lots of stuff was that the TS-850 will suffer from RF entering the rig via PIN 11. This was when I was on any mode or band. I am using the PK 232 and my solution (one which I had read that someone else had done, don't know who now) was to break off PIN 11 on the cable end going to the rig. Was the easiest think to do and it solved all my RF problems. If you decide to do this, PROCEED AT YOUR OWN RISK. Check back-issues of QST etc to see if you can find the same stuff I had read.

"Disallowing Tech Plus operators HF voice....." - is an example of the "I want it all" mindset! They aren't being disallowd anything they can't earn by applying themselves to learn something further. Learning some more CW isn't like demonstrating the ability to perform unrelated brain surgery. CW is related to communications. Everyone is trying to redefine what the term "related skills" means.

Tech licensees have been successfully upgrading for years without having HF phone priveleges. Why do you think they will stop upgrading now?? The only reason I can think of is the "dumbing down" of America's youth by "allowing" them priveleges without teaching them how to earn them.

And....the only way that "US code requirements are out-of-line with the rest of the world" is that we use a graduated system to establish "incentives" to improve oneself. The "rest of the world" requires CW for amateur licensing - now some of us are proposing to eliminate the requirement. It seems to me that the US would then be the one who is out of step.

The whole CW discussion is only a red herring to justify the avoidance of applying extra effort to gain extra rewards.

694. Transistor gain and beta? Different?

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-08 00:00:00 UTC
From: electron78@aol.com
Message-ID: <1998080814462400.KAA14985@ladder03.news.aol.com>
Source record: 165189

This question has bothered me for some timeï¿½ In the discrete transistor data sheets beta always has a huge variation in values (sometimes between 20 to 200!), yet when I read the transistor's power gain specs, there is rarely much of a variation at all (such as Min: 15dB, Max: 17dB)! Since beta is the current or voltage gain of a transistor, I had always thought that the beta was inexorably linked to power gain (I am not referring to the complete biased transistor amplifier, which can be biased to nullify beta variations from transistor to transistorï¿½).

Any clarification on transistor gain as it pertains to beta is much appreciated!

Have you considered one of the "throat mikes" that are commercially available?

Although they don't quite sound as good as other traditional mikes, you shouldn't have any "wind noise" problems with one! Their PTT switch can be clipped to your shirt.

The PREMIERE SPM-502 is specifically built for our FT-%0s and VX-1R HTs.

Al, I have many many friends in radio who are technician class and have licenses 20 years old, they are very good engineers/designers etc. they are what I consider the creme de la creme of amateur radio. They never bothered to upgrade to General because they never wanted to bother with CW. Looking back now I must admit, if they had HF privileges we would have had many more operators on HF who were 'good' radio men. They saw no connection between CW and the technical operations of running an HF station so in a mild form of protest didn't upgrade.

At the same time I see many Extra Class licensed op's who have also been around for 20 years and would have trouble explaining how a simple bandpass filter works, I used to think that the CW requirement was important to keeping out the 'riff raff' from the HF frequencies, I no longer believe that. All were doing is keeping out what are otherwise smart radio men from experimenting on HF.

As far as the dumbing down of America, an amateur license IMHO is a license to LEARN, not a diploma or a representation of competence, those who choose

to learn more about radio will, those who choose to become appliance operators will also. It has been that way ever since you could buy gear off the shelf. I don't believe changing the privileges granted to different classes of operators is going to change the above one way or another. Our novices are allowed to run CW on HF and need 5 wpm to do it, it doesn't require any more technical competence to operate on 7.125 than it does 7.010. I've never been able to figure that one out.

Sure, they could EARN the privilege by upgrading to extra and learning CW at 20 wpm but is the attraction there the way it was 20 years ago? I doubt it, lets drop the CW and petition for a new band requiring Extra class theory and no CW, that band can be used ONLY if it's connected or accessible somehow via the Internet for voice/data communications. NOW you have a group of younger hams motivated to upgrade.

Tim

>Whacko]...

What did you expect him to do?
>
>
>we need the league removed from part 97 as the recognized group, and a
>return to funded enforcement activities by the fcc.

I agree with the enforcement part, but it seems you didn't get enough
information. You probably needed to monitor this over several nights,
making note of propagation & station ID's to ascertain where it was
coming from.

I cynically note that if we expect the ARRL, or the FCC, to be our
mommy and our daddy, then we probably get what we deserve. Whatever
happened to the famous amateur HF acumen that could make an
investigation of this type without waking up an ARRL director.
Does CW also impart HF direction-finding techniques and propagation
modeling?
Now, if you'd done the legwork and *then* brought it up, perhaps you
would've had better results. Or discovered it was a legitimate

broadcaster on 75 meters outside the US.

>
>the only way it seems in this day and age to get part 97 enforcement
>allocations back to the fcc is to elect a new congress this year,
>catagorically kick out these "R"'s that are making the current

We have elected a "new" congress every 2 years for the past 6 years.
Funny how the power devolves to the lobbyists, who of course can court
the new members, corrupting them real good before the voters kick them
back to the private sector in 2 years. And what relevance has this
had for amateur radio?

>
>Don't be a dumb-ass,
>Be a smart-ass,

No matter how he tries, they feel lonely during those summer months. Worked All Europe just doesn't give them the multipliers they are craving. Won't you fine business folks at ARRL set up a series of summer contests ? We know you're trying ! Check out 3830 Mondays at 8 PM. A ARRL advertiser is promoting WEEKDAY CONTESTING ! As if there isn't enough wasted electricity in the heat of summer in New England spent on cooling these couch potatoes as they sit in their sub-zero rooms plotting their "amateur antennas", now they spread out from 3800-3850 for their private little "tests".

4 over 4 on 20m at 120 feet
3 element 80m yagis
Receiving antennas longer than three football fields

All of which are the mark of a true AMATEUR radio EXPERIMENTER !

1. The battery in my TS50 was stuck on the board with a double sided tape. I'm not sure if the battery is available locally of not since I didn't use an exact replacement. I got a aaa double (2 batteries for 3 volts) alkaline battery holder from Radio Shack and glued it inside the lower cover. I cut out the old battery leads leaving the tabs to solder on (so I didn't have to solder on the board) and connected the bought battery pack. It has worked fine for the last year. Future replacement will only require stuffing more aaa's in the battery pack. Turn the rig on and off right after replacement to avoid excessive current draw from the replaced batteries.

2. I got my TS50 in Feb of 1994. It's strictly used mobile and very beat up but still works great.

Dont' laugh, but I get this great idea of starting a radio station!!!!(perhaps because of the many radio stations I am able to access through my computer and the internet).

First of all, I do not have the faintest clue about this.

Could anybody provide me with advice, comments, books, vendors, websites, etc.

This should not be from the point of view of a corporate setup with lot of access to financing, but rather , a hobby, basement, volunteer type of thing.

I am particular interested in music, and broadcast range should be from NY to Caribbean(you probably guess the type of music)

I am very computer and internet literate, and would like this to be very computer dependent as possible.

Short-wave, FM, AM, etc

Every piece of information will be highly appreciated

Thats part of the problem with (ok, SOME) ex-CBer no-code Techs: they wanted to be hams, and leave the CB mess behind them, but they don't want to act like hams, or learn new ways of doing things. After all, they were big fish in the small CB pond with their ham rigs, so they "still know it all"

Maybe you really didn't want to find any?

In addition to checking paper listings of clubs on campus, did you try looking for towers with HF antennas on them? That would have found you the (thriving) amateur club at UBC if you were there. I visited Cornell University about 6 months ago, and the same strategy located the ham club there.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 08/2330Z AUGUST 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 08 AUGUST AND FORECAST FOR 09 AUGUST - 11 AUGUST
STATUS INDICATORS SOL:** YELLOW ** MAG:GREEN ION: GREEN

1A. SOLAR SUMMARY
Activity 08 Aug: Moderate

Flares Max Fadeout Begin End Freq Sectors
M3 0317 Confirmed 0316 0325 lower East Asia/Australia

Observed 10.7 cm flux/Equivalent Sunspot Number for 08 Aug: 147/100

GOES satellite data for 07 Aug
Daily Proton Fluence >1 MeV: 1.4E+05
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 9.50E+05 (normal)
X-ray background: B5.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 Aug 10 Aug 11 Aug
Activity Low to moderate Low to moderate Low to moderate
Fadeouts Probable Probable Probable

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 Aug: 150/103
COMMENT: Isolated M class flaring expected. A centrally located
solar filament dissappeared overnight (DSF).

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 08 Aug: Quiet to unsettled

Estimated Indices 08 Aug : A K
Learmonth 10 3232 3222
Fredericksburg 13
Planetary 13

Observed Indices 07 Aug : A K
Fredericksburg 24
Planetary 28 4654 4323

2B. MAGNETIC FORECAST
Date Ap Conditions
09 Aug 8 Quiet to unsettled
10 Aug 9 Quiet to unsettled

11 Aug 9 Quiet to unsettled
COMMENT: Recurrence and DSF suggests active conditions on 12-13 August.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
08 Aug Normal Fair-Normal Fair-Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
09 Aug Normal Normal Fair
10 Aug Normal Normal Fair
11 Aug Normal Normal Fair

COMMENT: High latitude HF conditions are expected to become
degraded during interval 12-13 August.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
08 Aug 67

Observed Australian Regional MUFs:
Darwin: mildly depressed (15%) during local daylight hours.
Other sites near predicted monthly values.
Some spread F was observed during local night
hours, southern region.

Predicted Monthly T index for August: 83

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
09 Aug 75 near predicted monthly values
10 Aug 75 near predicted monthly values
11 Aug 75 near predicted monthly values

Obviously, you missed my point. Not surprising, when you use the dogma along
with the situational ethics. Typical stumpjumper.

"As the soft yield of water cleaves obstinate stone,
So to yield with life solves the insoluble;
To yield, I have learded, is to come back again.
But this unworded lesson,
This easy example, is lost upon men."

And FSK too, but a regen is a bear to tame. A DC receiver is more stable,
and not much different in complexity to build. Its a much better choice for
the beginner not yet well versed in the subtleties of controlling positive
feedback systems.

>> A FSK transmitter
>> is only trivially different from a CW transmitter, actually a tad simpler

Historical inertia I expect. As you know, it only takes two components to turn a
CW transmitter into a FSK transmitter (and you can eliminate the CW keying
shaping components so you end up with a net parts count reduction).

>BTW, as an aside, have you noticed how so many consumer PC's bleed all over
>the place when you're anywhere near them with a receiver?

Yeah, but standard shielding techniques work with them just as well as with
any other unintended emitter. Sand off the paint on joining edges, and add
a sheetmetal screw every 5 cm along every seam and they become quiet
as a church. Usually it is the monitor that's the real noisemaker, and it isn't
shielded at all in its plastic case. Some wire mesh, or conductive spray, or
3M copper tape (love that stuff) can quickly remedy that. Amateurs should
be cognizant of this very basic idea of shielding, but too few are even though
they may beep very fast.

>Also, I notice how EME/Moonbounce operators employ every trick in the book
>- low noise head amplifiers, complex multi-element beam antennae, DSP, etc.
> Of course, they need to use every trick given how near the hairy limits of
>sensitivity they opererate. They're not luddites. Yet they still choose
>CW. If the digital modulation techniques you often describe are so much
>better, why aren't they being employed by the EME crowd? They would surely
>snap it up in a heartbeat if it gave them any significant advantage.

There was a long discussion (argument really) on that topic on Moonnet. Most of the EME operators say "it isn't a contact unless done by hand and ear". Many of them acknowledge that other modulation and coding techniques work much better (they aren't stupid), but they don't want to use them because it "removes the challenge". I can appreciate that. They want to concentrate on high power amplifiers, big antenna arrays, low noise receivers, etc instead of using coding gain. That's their choice. But low power EME *has* been done using better modulations and codings by a few people. It is a different "game" than the one most EMEers want to play.

One EMEer actually got quite hostile when it was pointed out that EME can be accomplished with Oscar 10 grade antennas and power levels if better modulation and coding techniques are used (not theory, it has been done). He said that he had looked forward to retirement so that he could move to a place where he could have a huge EME array and he'd be damned if he would recognize contacts that didn't require that.

>> Or, a microphone and a single chip and you have a FM transmitter.

>monolithic device.

As I mentioned, simple things like FM transmitters and receivers would be built by beginners operating where the entry license permits, on VHF, so worrying about bandwidth isn't a concern. I disagree rather strongly with the notion that beginners should start out building with discretes. Do you learn detail schematics before you learn block diagrams?

Today, the important thing to grasp firmly is system design. Modern equipment is built with subsystem ICs, and the beginner should develop a strong grasp of that approach so that his skills will be transferable to repair of commercial equipment. It is likely that he'll never need to concern himself with the behavior of discretes since that's encapsulated by the chip designer. He is far better off learning to treat functional blocks in terms of their transfer equations.

Design has moved up another level in the last decade or two. Once, amateurs might even build their own discrete components. It wasn't unusual in the early days to hear of an amateur who setup glassblowing equipment to make his own

tubes. Later that sort of thing faded away as tubes and other discrete components became commodity items. Today, discretes are fading away as subsystem ICs become the commodity items. Rather than being a component designer, today we need to become system designers (and system troubleshooters). That rarely requires detailed knowledge of internal discrete device physics. We leave that to the engineers running the wafer fabs. Our focus is on communications systems.

>> ...<SNIP>

>are implying), why do I see so little work done now by the average Tech on
>VHF, UHF, etc., where CW is no impediment? Why would the elimination of a
>CW requirement for HF suddenly free up all this currently suppressed
>talent?

No, I'm not implying that CW is what's stopping a flood of development by amateurs. Unfortunately, I don't see any such flood. What I am saying is that *among builders*, we need to be developing skills which are relevant and transferable to the wider electronic world. That's one of the charter purposes of amateur radio. Constantly regurgitating the MOPA CW transmitter doesn't do that. Today it isn't even a good place to begin.

And in a broader sense, we need to be developing a consciousness among all amateurs that there are techniques beyond CW and SSB which pay large communications dividends. If amateurs are to serve as an informed leavening of the populace with regard to communications technique, it behooves them to become comfortable with the ideas behind the sorts of techniques being adopted today. And most of those involve digital modulations and codings. Even if all most amateurs ever do is integrate collections of black boxes, they should gain an appreciation for how and why those systems work, and how to make intelligent choices between various techniques.

>I'm convinced that removal of the CW requirement will not be compensated by
>an increase in the technical requirements elsewhere in the tests. I
>believe it will not result in more technically oriented folk entering the
>game. It will be simply another dumbing down of the exams. Just look at
>history to see justification for my belief.

There is nothing dumber than conditioned reflex. No intelligence at all is involved in that. Even a flatworm can be conditioned to run a maze. I would hope we'd be interested in something somewhat smarter than that. The skills of the backhoe operator are more highly valued than those of the manual laborer because he has learned to use

technology to allow him to work *smarter not harder*. This is what
we should be emphasizing in amateur radio as well.

The purpose of licensing exams is to assuage government concerns
that we know how to operate legally and safely. As far as I can determine,
there is no recognized problem being caused by too slow Morse operation.
I'm not aware of any NALs ever being issued for this. It is simply not a
matter of regulatory concern. So the fact that it has such an overwhelming
influence on licensing for privileges which are largely unrelated to Morse
is all the more baffling. Or in other words, I find the current licensing
system incredibly dumb. We need to smarten it up, not perpetuate this
dumbness. I'd much rather have an amateur understand the implications
of the Shannon relation than to be able to manually emulate a modem.

QST de W1AW
ARRL Bulletin 55 ARLB055
>From ARRL Headquarters
Newington CT August 7, 1998
To all radio amateurs

SB QST ARL ARLB055
ARLB055 FCC's streamlining proposals due out soon.

The ARRL has learned that the FCC very likely will release its anxiously awaited ''streamlined'' Part 97 Amateur Service proposals sometime during the week of August 10. The document, part of the Commission's 1998 Biennial Regulatory Review, was adopted July 29, but it's undergoing some last-minute tweaking prior to public release. Editorial fine tuning like this following FCC adoption of a document is part of the normal process and not considered unusual.

Details of the FCC's license restructuring or Morse code testing proposals still are not available. The Notice of Proposed Rulemaking (NPRM) will carry WT Docket No. 98-143. It's expected that the FCC will use the NPRM to respond to some outstanding amateur rules-related petitions, including RM-9196, which proposed changes in the administration of CW tests to handicapped individuals. The ARRL will release details of the NPRM via a W1AW bulletin and on the ARRLWeb (http://www.arrl.org) as soon as the information is available. It's expected that the FCC will post the complete set of proposals on its Web site, http://www.fcc.gov.

Word is that the FCC will provide an extended period--something longer than the typical 30 days--for the amateur community to voice its comments on the proposals, and additional time also will be provided for reply comments. The ARRL released its own Amateur Radio licensing restructuring plan last month.

I converted a toy walkie talkie to 50.585 (IIRC), (A crystal I happened to
have), took it to a ham friend's shack, he set up a crossband repeater
6M AM <> 2M FM and I actually worked someone thru this setup. Took a while
to explain it, though. Range between me and the crossband repeat, about 100
feet. Not really a DX record maker..... :-)

Congradulations to you Cecil and too all your friends for having backup power. Excellent!!! I also have backup power (solar) and all three of my VHF repeaters are solar powered.

I would be interesting just what percentage of licensed Hams have backup power systems like you have defined?

Hi,
CW is for HF and HF is for CW. Is it not?
I wonder what the trend is. There are lots of CW trafiic on HF bands.
Unless CW is banned(outlawed), I am on CW 99.9999999% I do have a
microphone too, tho. I can work CW all day, all night but no way with
that dang microphone. My family would try to kill me for disturbing
peace in the house, hi. CW and headphone, noone is disturbed.
CW is music to me, a form of arts, a way to meditate. Listen to a good
fist and enjoy!!!
Have a great week end, 73,
Tony, VE6CGX, Fists #3919

Source record: 165319

Bryan -

1. US General Class is not exactly equivalent to N.Z. (I think the C.W. speed is different) but for practical purposes, it is regarded as the same by our administration.

2. 2m FM Repeaters in Auckland:

146.700MHz (-600kHz) split. Open access, no PL tone required (this applies to all repeaters in N.Z. by the way).
146.625MHz (-600kHz) split.
146.900MHz -600kHz split.
147.325MHz +600kHz split.

The 146.700 - locally known as the "670" repeater, is closest to the downtown area.

The 146.625 "6625 repeater" is located about 45 miles south of Auckland city but is on an excellent site and gives very wide area coverage.

146.690 "690 repeater" covers South of the City as does 147.325. The 147.325 repeater is also on a good site and gives good coverage.

A TNC (Terminal Node Controller) is very simular to a modem.

You can use your communication software you use for a modem.
you type in commands like:

C AF4HM

instead of atdt5551212

and get

CONNECT AF4HM

Its pretty easy when you learn how to use it, but packet radio
is years behind and is only at the 1200 baud stage.

If you want to relay you type in

C AF4HM via KF4QP

and you will relay through KF4QP

You can set up a path with many stations:

C AF4HM V KF4PQ,KF4GY,N4SYY-9,N4AWX

Go to radio shack and get the NO CODE technician book and read
it, and then take the test. You will need a license un fortunatly.

Regards,

-=Russ=- KF4ODD

My daughter and I recently visited several colleges from Brandeis
to Georgetown. One had a list of 178 clubs on campus. In all the
listings of all the clubs on all the campuses, there were exactly
zero ham radio clubs.

What does that tell you?

Please visit my World Wide Web Site, you have never seen a page like it.

750. The technical competence of hams

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-08 00:00:00 UTC
From: burt@imfamous.com
Message-ID: <6qhdms$9ja$1@nnrp1.dejanews.com>
Source record: 165326

The below explains why the level of technical
competence in ham radio has gone down.

There once was a pretty good student,
Who sat in a pretty good class
And was taught by a pretty good teacher,
Who always let pretty good pass.
He wasn't terrific at reading,
He wasn't a whiz-bang at math.
But for him, education was leading
Straight down a pretty good path.
He didn't find school too exciting.
But he wanted to do pretty well.
And he did have some trouble with writing.
And nobody had taught him to spell.
When doing arithmetic problems,
Pretty good was regarded as fine.
Five plus 5 needn't always add up to be 10,
A pretty good answer was 9.
The pretty good class he sat in
Was part of a pretty good school.
And the student was not an exception,
On the contrary, he was the rule.

The pretty good school that he went to
Was there in a pretty good town.
And nobody there seemed to notice
He could not tell a verb from a noun.
The pretty good student in fact was
Part of a pretty good mob.
And the first time he knew what he lacked was
When he looked for a pretty good job.
It was then, when he sought a position,
He discovered that life could be tough.
And he soon had a sneaky suspicion
Pretty good might not be good enough.
The pretty good town in our story
Was part of a pretty good state,
Which had pretty good aspirations,
And prayed for a pretty good fate.
There once was a pretty good nation,
Pretty proud of the greatness it had,
Which learned much too late,
If you want to be great,
Pretty good is, in fact, pretty bad.

751. The state of the state of ham radio.

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-08 00:00:00 UTC
From: burt@imfamous.com
Message-ID: <6qhdr9$9mu$1@nnrp1.dejanews.com>
Source record: 165327

The following has been sent to several newspapers around the country.
Most recently published in Duluth, Mn.

There was a time when amateur radio provided a public service in training operators for military service, technicians for industry, fostered international goodwill and carried emergency communications. Just like hat making in Danbury this rarely is true any longer. The technology has long ago left hams by the roadside. Today amateur exams are so simple children who can barely read can pass the test. All questions AND the answers are published in multiple choice format. The examinee knows the actual questions and answers ahead of time. The average age of today's ham is well over 50 whereas when I was first licensed, in Norwalk, the average age was 27. Hams are still communicating at 1200 baud when internet users fly along at 40 times that speed. As far as international goodwill, most hams rarely ask a foreign station anything more than what his equipment is, they do not care about culture, lifestyle or anything that really matters. Hams usually want the "credit" for having talked to 100 or 200 or more foreign countries (did you know both Hawaii and Alaska are separate "ham" countries?). If you have a scanner listen to frequencies between 145 MHZ-148 MHZ and listen to the content of the conversation. These are valuable frequencies that other public service and commercial interests could use PRODUCTIVELY. Cell phones have replaced the need for most emergency ham communications in this country. Hams use many other frequencies for little more than a discussion of personal medical ailments. Hams are required to serve the public but in fact they are serving themselves almost all the time. Worse they cause interference to other services (like your TV) and they erect large towers and guess what, there is nothing you can do about it. The F.C.C. is too underfunded to respond to citizen interference complaints and the ham radio lobby (American Radio Relay League) has caused both state and federal governments to pass laws that prohibit towns from controlling these large antennas.

The frequencies that hams use are for the use of everyone not their personal fiefdom. It is time Congress conducted hearings and investigated whether ham radio has become the vast wasteland (a term that former F.C.C commissioner Newton Minow popularized).

Any one out there using either a PK 232 or the Hal P-38 system with the new FT 847. Need to know the secrets to hooking up the P-38 on the 3.5mm plug used by Yaesu on the FT 847.

Thanks,

Dave

>You can see her in the family section of my WWW page.

I think she's attractive. Send her to Tech. :-)

Virginia Tech is a very good university if you want to study technical subjects like engineering. It is especially good if you're interested in molecular biology and genetic engineering. Blacksburg has a branch of PPL (the company that cloned Dolly the sheep) and we are doing some extremely cutting edge stuff with producing human therapeutic proteins in pigs.

I did my undergraduate work here (Biochemistry and Chemical Engineering) and am currently working on my PhD in Chemical Engineering. I absolutely love it. The environment is small town and the opportunities exceed those of most universities, in my opinion.

If she (or anyone else you know) is interested in Virginia Tech, write me an E-mail and I'll be happy to help. Damn! I sound like a recruiter.

762. IC706MkII Disable 50Mhz

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-09 00:00:00 UTC
From: martinsole@my-dejanews.com
Message-ID: <6qj1qqrdl1@nnrp1.dejanews.com>
Source record: 165088

Hi to all,

I have recently purchased an IC706MkII. As I am now stationed in Thailand I wish to import this radio for use here. All radio equipment coming into Thailand has to be physically inspected and checked by the local PTT authority.

50MHz is not allocated in Thailand and radios which have transmit capabilities on 50MHz will not be granted an import permit unless it can be shown that Tx in this frequency range has been disabled.

Can anybody advise me if it is possible to disable 50MHz transmit either alone or in conjunction with other bands. I did see a question from somebody in Indonesia who wanted to access 50 and 144 on an IC706 that was locked so I think it might be possible.

Smuggling the radio into country is not an option, fines exceed several thousand US$ and jail is usuallly an immediate reaction until the matter is sorted out.

Any help to my e-mail address, martinsole@compuserve.com greatly appreciated.

Rgds es 73

766. The Ballad of Ida Know

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-09 00:00:00 UTC
From: TheTechTeacher@my-dejanews.com
Message-ID: <6qjeme$g6r$1@nnrp1.dejanews.com>
Source record: 165092

FROM "THE STORY OF JACK CANTQUITT"
BY RAUL BLOODWORTH

Ida, oh Ida, where did Ida go ? Ida Know Ida Know Ida Know.
Away from her love's ham radio, Ida Know Ida Know Ida Know.
Too much yapping, too much time, no dinner dancing and surely no
wine, Ida Know Ida Know Ida Know.

Too much time spent down on the air and not enough time fixing his
hair,
Ida Know Ida Know Ida Know.
He once had a life but now doesn't care, Ida Know Ida Know Ida Know.
Alone he sits in his cellar chair, Ida Know Ida Know Ida Know.

Ida, oh Ida, where did Ida go ? Ida Know Ida Know Ida Know.
Away from her love's ham radio, Ida Know Ida Know Ida Know.
Too much yapping, too much time, no dinner dancing and surely no
wine, Ida Know Ida Know Ida Know.

CQ DX CQ DX, it is all you say, well tune into this, QST- don't miss,
HEY YOU ! I'm leaving today.
Ida Know Ida Know Ida Know.

He said eighty-eight, but it was too late, his Ida had walked out on
him.
Ida Know Ida Know Ida Know.

Ida, oh Ida, where did Ida go ? Ida Know Ida Know Ida Know.
Away from her love's ham radio, Ida Know Ida Know Ida Know.
Too much yapping, too much time, no dinner dancing and surely no
wine, Ida Know Ida Know Ida Know.

Now a YL is hell, when you're hammming a spell, and just can-not get a
way,
from a rare one that's live, on 75, at the end of the hamming day. So
now
there he sits, alone with Heathkits and in his case it's better that
way.
When visitors come in the midst of a run and he cannot get away, they
say hey Jack, when'll Ida be back and says he, "is she away ?"

Some of you hams are SO cheap! It's called
"shipping and HANDLING". That means that someone
takes their valuable time to package up these
products for you. It also involves the cost of
bubble wrap or other packaging material, shipping
tape, labels, boxes, invoices, insurance, labels,
gas to drive to UPS or Post Office, vehicle
maintenance on same, etc.

I really feel sorry for these ham radio mail order
stores. They have an even rougher than normal
time because of their dealings with ham operators.
More whining, more returns, more excuses, more
cheapskates. Ham radio businesses----I SALUTE you!

783. VX-1R Belp Clip

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-09 00:00:00 UTC
From: clintbrad4d@earthlink.net
Message-ID: <6qkft7ihe1@nnrp1.dejanews.com>
Source record: 165109

Bob Dashoff, KN6GA, knows and loves his Yaesu VX-1R mini HT. And this respect for Yaesu'e unit shows throughout his VX-1R Belt Clip Replacement kit!

Yaesu's stock belt clip for the VX-1R is not one of the best clips made. It just does not feel "secure" enough.

Bob saw that minor shortcoming, and went to work. What he has done is modified a Motorola belt clip to fit our VX-1Rs PERFECTLY.

A picture of one is at...

http://www.icongrp.com/~sllewd/beltclp.htm

Or email Bob and he'll email you a picture or two.

I got mine last Friday. At first, I thought I was going to be disappointed when I saw that it was a permanently-mounted configuration. I mean, there I was with a less-than-24-hour-old new HT that was super tiny, and here I go adding to its "bulk." <g> I also thought it might make my leather case worthless - by not fitting properly after installation.

I was wrong on both counts! The case fits fine, and the clip itself looks and feels great. It is a great product that EVERY VX-1R owner should have.

- Clint Bradford, KE6LCS

VX-1R BELT CLIP
To order, please send $12.50 + $1.50 shipping/handling ($1.50 covers any quantity!) to:

Yes I have noticed how they seem to be anti-ham radio. I guess that explain's why they are trying to destroy it in every possible way. I think they actually don't care much for Herby either. If they did seriously want to "help" him in his fight, they would endeavour to be much better hams, and act so on the air. So, in my opinion they are using Herby for an excuse for their idiotic antic's.

Actually you are wrong about Marty's CW ability. He is really quite good on the key. I have worked him in several contest's and he is in my opinion a good to excellent operator. Unfortunatly in between contest's he is a bit of a Jeckle and Hyde.

As for their little games here in the NG, you must understand that they' are all sociopath's. Thus everyone else is wrong, and they are superior to all of us none BARFey/ARG/Stumpers. There is no help for them. The only cure is when either the majority of ham's get sick of them and apply the Woufe Houng to a proper place in their anatomy, or they die off and leave us along.

Can't wait to see the modifications in this text when Marty get's ahold of it.

Tracy it seems you enjoy code a lot. But why must you insult a group of amateurs by calling us
"lazy code-haters"? I don't enjoy code at this point in my amateure career. I enjoy all other VHF and UHF activites such as T-hunting and I don't bash the code people because they don't like it.

Some of you people read like a script from a bowling league brawl. Some of you despite your differences of opinion can relate your ideas without devolving into the gutteral slime that apparently forms the basis of the others' sustenance. I find this entire newgroup a fascinating case study in middle aged men whose wives have them by their balls all week, and need to resort to childlike innuendo and fantasy behind big mamma's back to vent what they should say to the "XYL's" face. But then, you'd all starve because no one would cook food for you.

The complimentary matches are not meant to be used to light the breakfast which you obviously smoke each day before you post.

^^^^^^^^^^^^^^^^^

Poor functional illiterate O' Braindead. Too bad, the FCC uses a laser printer to print out "licenses." <snicker> Hardly any ink smear. You'd better borrow a "See and Spell" before you try to post again, lackwit.

So who did you pay to take your general test for you?

>suckboy.

And how _do_you breathe, with your head inserted up Herpie's colon so far?

>Get ready to send porkbutt some money,he is going to need it.

At least I _could_send him some money. But, tell me, no-talent, why are the
rumpjumpers soliciting for money? And what _is_the fetish you have about having
sex with farm animals? I guess Medusa the canker-sore gets boring, huh?

It wasn't a threat. Rumphumpers only get aroused when they think of "rods" and "backs" in the same sentence. Besides, I I showed up in Phillippi, the boy wouldn't have any clean clothes, because he would soil himself so badly, a continuing problem from his childhood.

><useless bible diarea dumped>

802. Ohio/Penn DX Bulletin #369

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-09 00:00:00 UTC
From: kb8nw@barf80.nshore.org
Message-ID: <MPG.1037dc0bafae14f8989694@nntp.stratos.net>
Source record: 165128

SB DX @ WW $OPDX.369
Ohio/Penn DX Bulletin No. 369

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 369
BID: $OPDX.369
August 10, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2EWB, K2WE, WB2RAJ/WB2YQH & The 59(9) DXReport, AJ4Y, KF9YL, ARRL DX Bulletin, BD7JA, DL6LAU, EW4EW, G3KHZ, G4BUE & DX News Sheet, GW0ACH, JA1ELY, JT1KAA, PS7AB, VK9NS, YB4JIM, YC0LOW, Z32ZM and ZP6CW for the following DX information.

3V4, QERQUENAH ISLAND (Rare IOTA from Tunisia). Mome, Z32ZM, informed OPDX (and others) that he together with Dragan/Z32AU (HB9DNE), Hrane/YT1AD (Z31AD) and two other operators from the club station 3V8BB, will put this very rear island on the air for the first time in more than 40 years. They will activate IOTA AF-073 between September 11-18th. Their station will be on the air 24 hours a day with operations on CW, SSB and RTTY. The following are the suggested fequencies:
CW - 7005, 10101, 14024, 18073, 21025 and 28025
SSB - 7060, 14260, 18125, 21260 and 280460
RTTY - 7035, 14080, 18085, 21080 and 28080 kHz
(12 meters not used in 3V-land)
The team reports this expedition will cost a lot and any financial or technical support is more than welcome (especialy NEW or USED radios, amplifier, antennas, SWR, rotator, coax-line, electronic keyer and lap-top computer). The team would like to set up a second station. If you would like to help, donations can be sent to: HB9DNE-Dragan Kostevski, Hugsam Str. 3, CH-8833 Samstagern, Switzerland. Or direct to Dragan Kostevski's bank account: SPARCASSA-RICHTERSWIEL, Conto nr: 162.200.689.03
For any other information or questions please contact Mome, Z32ZM, via E-Mail: dalibor@freemail.org.mk
After the DXpedition takes place, a WEB page with logs and photos will be created, with the special "Thank You" page for the donors (This will also be on the QSL card).

5X, UGANDA. The "DX News Sheet" reports that Laurence, GM4DMA, will be active again August 14-21st as 5X1LH. Activity will be mostly on 17, 15 and 6 meters with 100 watts beaming to Europe. QSL via home call.

A3, REP. OF TONGA. JA2JW, his XYL JA2DPC and his second son JL2ONQ should be active by the time you read this. They are to arrive on August 10th and stay until August 14th (QRT at 0700z). They will be active on 80-6 meters, SSB/CW. They will use 100 watts into G5RV for 80-10m, dipole for 30m and a 6 element yagi for 6 meters. Check 28350 kHz for 6 meters schedule. Look for A35YH/JA2JW (mainly CW), A35PC/JA2DPC (mainly SSB) and A35NQ/JL2ONQ (mainly on 6m). QSL via each homcall.

A5, BHUTAN. Jim Smith, VK9NS, will be releasing a HIDXA announcement VERY soon about a possible visit to A5, Bhutan, towards the end of October. A separate bulletin will be issued as soon as we receive it. Meanwhile, OPDX InterNet Subscribers will receive a special additional bulletin that Jim put out earlier in the week about his good friend from A5 who passed away.

BI7, WEI-ZHOU ISLAND (New China IOTA). Yang, BD7JA, informs OPDX that after several months of hard work and planning, he and others plan to go to Wei-Zhou Island (Chinese island listed as "d" for the IOTA program). Members of the operating team will be BD7IA, BG7IB, BD7IX, BD7JA, BD7JG, BD7JK, BD7KW, BG7NI, BG7NQ and BG7SU. They will be on the island August 20th and leave August 23rd. They will use the callsign BI7W. They will be active on 40-10 meters with operations on SSB, CW and RTTY. Their station will be equipped with a TS-950, TS-690, FT-900, AS, 40-2CD and a generator. QSL via BD7JA: P.O.Box 1713, CANTON (510600) P.R. China). QSL ONLY DIRECT. This time the QSL card will be sponsored by Jose/EA5KB. At this time a WWW homepage is under construction and details will be forthcoming.

CE, CHILE. Steve, NE4Z, is active from Santiago as CE3/NE4Z. Activity is mainly on 28340 or 21340 from 2200-0000z daily. He has also been heard on 7031 (at 0345z), 14057 and 14188 kHz. Steve is planning to activate some of the CE IOTAs. Stay tuned! QSL is to AJ4Y: Paul Womble, P.O. Box 1207, Highland City, FL 33846-1207 USA.

EV200, BELARUS. Nick, EW4EW, reports that a Byelorusian-Polish special event station EV200AM will be activated between August 21-25th to celebrate the 200th anniversary/birthday of Adam Mitskewich. Operations will be from Novogrudok, Adam Mitskewich's native land. QSL via EW4WW or EW4MM. Meanwhile, the ARRL DX Bulletin states EU200A, EV200M and EW200M will be on the air for the same celebration until December 31st. QSL via operators instructions.

FM, MARTINIQUE. "The 59(9) DXReport" states that Vincent, F5JMV, will be active from here as FM5JV for the next 3 years beginning August 11th. QSL via F5LNV for a special QSL.

FP, ST. PIERRE & MIQUELON (Correction/Update). Last week we mentioned that the Prairie DX Group DXpedition would be going here (Aug. 26th to Sept. 1st) but gave the incorrect callsign FP/N9ND. The correct callsign is FP/N9PD. QSL DIRECT or via Bureau to N9PD (not N9ND as mentioned). As contacts are made with the stations from around the world, this activity will be reflected on the group's web page within minutes. For the first time hams and non-hams around the world will have the

opportunity to view and study the activities of a DXpedition as it happens. In addition to live ON-THE-AIR logs, the Prairie DX web site will include Amateur Radio related links, featured information regarding the islands of St. Pierre and Miquelon, plus updated photographs and sound files from the DXpedition. This unique, VIRTUAL DXpedition will afford hams the opportunity to immediately verify their contact with a DX station. The PDXG has a Web page available at: http://www.prairiedx.com

GB5, FLATHOLM ISLAND (Wales). Eleven members of the Barry Amateur Radio Society will be operating as GB5FI from this Welsh Island (IOTA EU-124) from August 28th to September 2nd. They will be operating on all bands on SSB, CW, RTTY, Slow Scan, Pactor and Amtor. QSL via GW0ANA, Nirvana, Castle Precinct, Llandough, Cowbridge CF71 7LX or Bureau. For more information about this operation and their club, check out the Web site: http://www.gw0ana.demon.co.uk/bars

JD1, OGASAWARA ISLAND. Look for Eiji, JQ1SUO, to be active beginning on the evening of August 14th until the morning of August 16th. He will sign JQ1SUO/JD1 and will operate mainly on 20, 17 and 12 meters. QSL via homecall.

KH0, MARIANA ISLANDS. Masa, JH6VLF, will be active from Rota Island (OC-086) as KH0/WD7CLP, October 9-12th. He will also be active in the VK/ZL/Oceania CW Contest. Activity will on 40, 30, 20, 15 and 10 meters CW/SSB. QSL via JH6VLF, Masanori Matsuyama, 303-JyunesuSuzuki, 1330-Hiregasaki, Nagareyama, Chiba, 270-0161, Japan.

PU5, SAO FRANCISCO ISLAND (BRAZIL). This Brazilian island located in the Santa Catarina State North Group (IOTA SA-027, and DIB 08) will be on the air September 10-14th. Look for the callsign PU5U, CW/SSB, 80-10 meters and the usual IOTA DX frequencies. QSL via Bureau or direct to: PP5LL, Jay Lira, PO Box 08, Florian&#65533;polis/SC, 88010-970

QSL INFO AND NEWS.....
Jim Smith, VK9NS, informed OPDX that he has just received the latest batch of VU2JPS logs from Mani by Registered Air Mail. Jim states that he will try to clear the outstanding cards before he leaves for the U.S. He mentions that he will carry some mail to the USA to be posted there upon his arrival.

Steve, K2WE (aka 3W6WE and XU2WE), reports all direct stateside QSLs for the 3W6WE DXpedition to Saigon from March, 1998, are in the mail. If you have not received your card by the end of last weekend, please let him know at "k2we@juno.com" (It may have been lost in the mail). He has about 50% of the DX cards done. Anyone who included return postage will get the card direct via Air Mail. All others will go via the bureau. The QSL is a full color photo card. The picture was taken on the roof of the Kasati Building where the station was located. The picture has Les, W2LK (3W6LK), on the left, and Steve, K2WE, on the right.

QSLs for special event station JU60MTZ (which celebrated the 60th anniversary of the Mongolian Railway Board) go via JT1CJ, Sh.Gankhuyag, P.O.Box 100, Ulaanbaatar-44, Mongolia.

OJ0AU, which was active July 21-27th logged, 14350 QSOs from Market Reef (EU-053). This included 2393 QSOs during the IOTA contest for a claimed score of 5.015.296 points. They operated with two stations most of the time. Conditions were disturbed due to an Aurora, but they were very satisfied with the results. QSLs should be ready in about 5 weeks. Please send your QSL (please ONLY use this NEW address) to DL6LAU: Carsten Esch, Kreuzweg 22, 21376 Salzhausen, Germany (direct or via bureau).

WOW!!!! Didi, YB4JIM, reports that a very bad economic crisis has been taking place in Indonesia, and for the past few months, all prices have doubled or tripled. Unfortunately, the effects have included the rise of postage costs (1000%!). That makes YB-ham's QSLing activity almost impossible during these hard times. Sending an IRC or dollars will not do because banks only take/change a $100 minimum and half postage cost to U.S. is 20 IRCs!.

XM3/CH3/CI3/VE8 POLAR BEAR DX-PEDITION 98 (CANADA). Just a quick reminder that this operation takes place next weekend. A group of Canadians have been authorized to use the special callsign XM3PBX for their Polar Bear Expedition train trip from Toronto to Moosonee (August 15-30th). They will also make a couple of stops on the way using the special callsigns CH3HBC/325, CI3XXV/25 and either VE8C or VE8I. For more details, see OPDX.363 (if you lost it, send an E-mail to the OPDX Archives at "opdx-request@nshore.org" along with the word "archive" in the "Subject:" line and then use the following command in the body of the message:
get volume98/363.0
For updates, check out the Polar Bear 98 Web site at:
http://webhome.idirect.com/~galati

XU, KAMPUCHEA (Cambodia). Steve, K2WE (aka 3W6WE and XU2WE), mentioned in his 3W6WE QSL announcement (above) to watch for an upcoming XU operation later in the year.

YE1, INDONESIA (Special Event). A group of ORARI members will go to Ujung Kulon National Park located in the western tip of West Java (OC-021), Indonesia, to operate as YE1ZI. This special event station is to commemorate the 53th anniversary of Indonesian Independence on August 17, 1998. The operation should be active on August 15th at 0000z and remain on air until August 17th, at 0500z. The team will operate on SSB and CW on 160, 80, 40, 20, 15 and 10 meter bands. QSL via YB0TK, direct (with SAE and mailcost/IRCs) to: Maruto, PO Box 6763 JKSRB, Jakarta 12067, Indonesia or YB0TK via bureau. Special certificates will be sent to those who are interested and able to contact YE1ZI on at least three bands (phone and/or CW, mixed) during its operation. Fee for certificate is US$ 10.00. Donations are still welcomed. For further information, please send E-mail to: mailto:dxuk@hotmail.com

ZF, CAYMAN ISLANDS. Look for Jim, KD3YK, to be active now until August 14th as ZF2JM. There have been no QSNs reported over the weekend. Jim plans to operate QRP CW on 20 and 40 meters. QSL via KD3YK.

ZP6, PARAGUARY. Doug, ZP6CW, has been quite active on 28027, 21027 and 18070 kHz CW. QSL via his manager ZP6CU - Dani, PO Box 73, Caacupe, Paraguay.

Gentlemen,
this group sets a real example of ham radio.
if this is what I have to look foward to then i cant wait.
I'll fit in with you fellows just fine. talk about CBers.
have been watching the post here for some time
and you fellows act worse than the people on the 11 meter band.
and you got the nerve to complain that the FCC & the ARRL are giving
ham radio away. you are helping by your activity on 75/80 meters
daily. clean up your act before some trucker with echo and a roger
beep ask you how yah doin good buddy on 75/80. your half way there.
I listen to the SW and all I hear is threats and more threats.
sounds to me that one of you is scared and the other one is glad.
just a thought from someone interested in amatuer radio.
with the example you are setting it will be real easy for me to come
up on the ham bands and drop the maul as we cbers say on 75/80
20/15 hell any of the bands thats just where it's heading.
only posted it because of the concern. clean up your act you BOZO's.

I was trying to point out that the original poster meant the magazine
not the term CQ.And although I believe what I said about all the lazy
code haters I did not say all no-coders are lazy or that everyone that
reads CQ VHF is lazy.I know how easy the tests are and I had to learn
about modes I'm not currently interested in(AM,packet)but I didn't try
to change the hobby to suit me.I also enjoy t-hunting and phone and
would like to see the CW requirements stay as a filter so the lazy will
move on to something more their speed . AB7RS

>Dont' laugh, but I get this great idea of starting a radio
>station!!!!(perhaps because of the many radio stations I am able to access
>through my computer and the internet)
>
>First of all, I do not have the faintest clue about this.

not to mention how to actually use a console, carts, etc right????

>Could anybody provide me with advice, comments, books, vendors, websites,
>etc.
>
>This should not be from the point of view of a corporate setup with lot of
>access to financing, but rather , a hobby, basement, volunteer type of
>thing.

well....regardless...it's gonna take more than a few hundred
bucks...not to mention a sincere commitment. broadcast quality gear,
even used is NOT cheap....not to mention a tower and a piece of land
for it...power is a consideration...this is no easy "i'm on the air"
solution now....you better be serious with this.

>I am particular interested in music, and broadcast range should be from NY
>to Caribbean(you probably guess the type of music)

maybe possible....and even possibly realistic....but more likely more
of a long term goal than initially.....depending on your backers. I
would focus more on a community oriented radio station, as you'll have
a better chance of getting a license from the FCC or DOC(in canada) as
low power stations are being licensed within the US, and apparently
canada is following suit to some degree...I would say probably under
10 watts of power.....which will save on a monthly power bill...

>I am very computer and internet literate, and would like this to be very
>computer dependent as possible.

so am I but.......

well...as far as i'm concerned....that what you want to stay away from
as much as possible for a community station....you want people not
computers....commerical radio has enough automation....with computers
running programs costing in the 1000's....though you could go the
cheap route I suppose......if anything, at a community station....you
should have a cart deck and reel machine right along with a hard
drive...and I have yet to see any commerical station totally get rid
of their analog console....right now, it's a combo of "both the tried

and true...and some of the new" and you have to look at it that way....because if the comp crashes...and I have seen it...and have been in the middle of it at some commerical stations...you DON'T want dead air...you go to CD players.....carts, reels, whatever.....the key here is NOT TOTALLY DEPENDENT on a computer....rather foolish that way!

>Short-wave, FM, AM, etc

go for low power FM community radio...if anything!!! and you can play all kinds of different music...which is what community radio is isn't it????
>Every piece of information will be highly appreciated

well...I hate to burst your bubble, but these are realities that need to be addressed...do something different than computer automation....for anyone remembering the old days of personality radio, it's the "hands on" approach of radio.....cueing the records, shoving in the carts....all part of it......NOT sitting there and letting the computer play the tunes, liners, etc!!!

NASA's mission statement is quite a bit divergent from ours. Regardless,
if we had a fleet of sub-contractors building gear for us at the taxpayer's
expense, we could pretend we're just like NASA, communicating with robots
millions of miles from us. (Those rude probes won't even QSL, even if
sent an SASE.)

That you desire to constantly compare amateur radio to NASA (or to the
military) just shows you live in some fantasy world, wanting to emulate
something you're not. Come back down to Earth, Boys.

> >Any suggestions?

My truck is a '97 club cab model of the Dakota. I've had success in installing an ICOM 706mkII and a Kenwood 742 in the compartment under the rear seat on the driver's side. The space is there if used wisely. Both units are mounted to the plastic lid portion of the storage compartment (on the underside of the lid). The lid makes a nice, removable "RF deck" which can be removed if necessary in just a few minutes by dropping off the antennas and control cables. With the exception of a small handfull of short 10/32 nuts and bolts, only the stock mounting parts that came with the radios were used to accomplish the installation under the rear seat. In addition to the radios, a duplexer and service loops of antenna and control cables also fit in the space nicely. Two 1" holes were drilled in the front of the compartment to ensure an exchange of air into the space. After many hours of operation, overheating has not been a problem.

The control head(s) are mounted to a short goose neck which is attached to the front of the hidaway drink holder on the front seat. The drink holder can still be used and can still retract. Speakers for the two radios are mounted on both sides next to the gooseneck. The only non stock parts here were a goose neck mount (purchased at HRO) and a small piece of wood (4"x 4"x 1/4") on which to mount the control heads.

The installation took about eight hours.

Hope this helps.

Mike Obermeier, KD6SNE

812. Official Press Release - Please Read

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-09 00:00:00 UTC
From: kh2d@my-dejanews.com
Message-ID: <6qm84a$1q8$2@brokaw.wa.com>
Source record: 165138

***
*** PRESS RELEASE
*** DATELINE - August 10, 1998 ***
*** PRIORITY - VERY IMPORTANT
***

The Bored Of Directors here at No-SSB International (tm) have
been commissioned to conduct some totally non-scientific research.
Through exhaustive efforts and at great expense we have determined
that over 500,000 licensed amateurs in the United States alone are
not affiliated with any organization. We feel this is because there are
not enough organizations available to give the average ham the
choice of joining an organization that fits his or her particular needs.

Well, we've fixed that problem ! Now there is something available
for EVERYBODY !

* No-SSB International (tm) http://www.qsl.net/kh2d/nossb.html
* No-FM International (tm) http://www.qsl.net/kh2d/nofm.html
* No-RTTY International (tm) http://www.qsl.net/kh2d/nortty.html
* No-SSTV International (tm) http://www.qsl.net/kh2d/nosstv.html
* No-QRP International (tm) http://www.qsl.net/kh2d/noqrp.html

No Dues. No Donations. No Meetings. No Commitment. Just click
EMAIL at the bottom of the page to tell us you want to sign up and
we'll rush you a membership number that you can proudly display.
Don't get left out - our computer can only handle really big numbers,
but we don't know HOW big, so send your email TODAY !!

All of these web page organizations are in place and ready to pass out
membership numbers to the amateur population of the world in
order to insure ham radio's future in the 21st century.

No restrictions apply. Make sure you include your amateur call sign
and the name of the organization YOU wish to join in your email.

OK, we know, sooner or later somebody is going to come along and
say 'I LIKE all that stuff. What is the right organization for ME ?'.
We thought of that situation too, so right now the members of our
Bored Of Directors are working on the buy-laws for an organization
for those of you who just can't find the right one where you feel that
you'll fit in. Coming Soon to a web page near you:

*** No-WhatEver International(tm)

The organization for the discerning amateur who's just not really
sure what the heck he doesn't like. Watch for our next press release.

73, Jim KH2D
No-SSB International (tm)
Member Number 1,000,002
Believe It (tm)
If You *CAN* Beep, NSI Wants YOU !
http://www.qsl.net/kh2d/nossb.html

*** This is NOT a prank. We know it sounds too good to be true,
but it REALLY IS !! Visit our web page and SEE !!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 09/2330Z AUGUST 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 09 AUGUST AND FORECAST FOR 10 AUGUST - 12 AUGUST
STATUS INDICATORS SOL:** YELLOW ** MAG:** YELLOW ** ION: GREEN

1A. SOLAR SUMMARY
Activity 09 Aug: Moderate

Flares MAx Fadeout Begin End Freq Sectors
M1 0847 Possible - - Lower Mid East/European
M3 1717 Probable 1717 1719 Lower South American/Atlantic

Observed 10.7 cm flux/Equivalent Sunspot Number for 09 Aug: NA

GOES satellite data for 08 Aug
Daily Proton Fluence >1 MeV: 3.5E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.80E+07 (normal)
X-ray background: B5.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
10 Aug 11 Aug 12 Aug
Activity Low to moderate Low to moderate Low to moderate
Fadeouts Probable Probable Probable

Forecast 10.7 cm flux/Equivalent Sunspot Number for 10 Aug: 150/103

COMMENT: Further M class flares expected.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 09 Aug: Quiet

Estimated Indices 09 Aug : A K
Learmonth 4 2211 1111
Fredericksburg NA
Planetary NA

Observed Indices 08 Aug : A K
Fredericksburg 13
Planetary 12 2433 3322

2B. MAGNETIC FORECAST
Date Ap Conditions

10 Aug 8 Quiet
11 Aug 8 Quiet to unsettled
12 Aug 16 Unsettled to active
COMMENT: Recurrence and DSF suggests active conditions on 12-13
August.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
09 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
10 Aug Normal Normal Normal
11 Aug Normal Normal Normal-fair
12 Aug Normal Fair-normal Fair
COMMENT: Good HF conditions expected next two days. However,
high latitude HF conditions are expected to be degraded during
interval 12-13 August.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
09 Aug 60

Observed Australian Regional MUFs:
Regional MUFs near normal to 15% lower than predicted
monthly values.

Predicted Monthly T index for August: 83

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
10 Aug 70 near predicted monthly values
11 Aug 70 near predicted monthly values
12 Aug 70 near predicted monthly values
COMMENT: HF comms expected to be good until 12-13 August. High
latitude conditions are expected to become degraded during this
interval.

You guys might as well boycott ICOM as well.

I guess CQ and QST never heard of the ICOM AH-100. This antenna handles 150 watts and loads from 1.6 to 30MHz (probably higher) with less than 2:1 SWR. It is a dipole configuration, using stainless steel cable. It can be used as a vertical or sloping vertical when one side is grounded. Of course, it is aimed at the marine market, where lotsa salt water tends to "improve" the signal.

I'm happy with mine. No $500 auto-tuners for me.

Brian/N0iMD

Michael Borowiec <mikebo@MCS.COM> wrote:
>I think the existing license structure is flawed. Disallowing Tech Plus
>operators HF voice below 28 MHz is to prevent them from talking to those
>who would encourage them to upgrade. This effectively cuts off the Tech
>Plus from most of the HF community,

The Technician license has traditionally been sought by those who were interested in V/UHF experimentation and operation. We've given Techs a taste of HF and now they want it all w/o wanting to upgrade.

Encouragement to upgrade has to come from within - either you desire HF privileges or you don't. One shouldn't have to rely on being given HF privileges in order to gain encouragement to upgrade to a license which gives HF privileges! =:o

You talk about how in giving HF privileges to Novices will smother any desire to upgrade - the same can be said for the Techs.

>and has driven a wedge between two
>large segments of the amateur population.

Which is proper, for HF and V/UHF are just as diverse as those two populations.

>The US code requirements are out-of-line with the rest of the world.

If you had any knowledge of amateur radio history, then you'd know that at every early international radio conference, the US was the *only* delegate nation desiring that citizens be allowed use of the spectrum; if the other countries had had their way, there would be no amateur radio today. Thus, it should come as no surprise that the US has always been "out-of-line with the rest of the world." As you say below, "get over it."

>I know of many skilled Tech Plus operators who have either sold off their
>HF equipment, or have quit the hobby entirely - a shame. Clearly,
>somthing needs to be done.

Yes, they should have been shown how to plug in a keyer so as to gain knowledge of HF operating and propagation. The thrill of working another country using just 25w (or even 5w) might have given them the encouragement to upgrade; if not, they probably would have sold their gear anyway. I don't see how using a mic would have provided the spark of desire; either one has the interest or one doesn't.

>In attempting to solve the problem, the ARRL may have gone a little too
>far. For instance, I am concerned that giving a Novice what amounts to a
>General ticket will remove any incentive to upgrade.

Yet you want to give the Techs full General privileges???

>Ever demonstrate low band DX to kids? When you make a phone contact,
>they can hear and understand what is going on. WOW! You're really
>talking to someone in Russia or the Canary Islands... COOL! Make the
>same contact in CW and they are lost. CW is alien, and appears to be
>a formidable obstacle to most people, regardless of the reality.

Yet somehow, CW is the second-most used mode on HF. Some days I
can count more CW QSOs on the bands than SSB.

>Yes, we're a society of instant gratification - get over it...

Those students in my classes who demand instant gratification always
end up receiving an F at the end of the semester; they cannot cope with
four months of daily study in order to gain three credit-hours. I'll
pass on your "get over it" advice to those impatient folks.

>Amateur Radio is losing steam and must be revitalized to offset new and
>exciting modes of communication that have no license requirements (i.e.
>the ubiquity of the Internet and cellular telephones).

Cell phones are not an exciting mode - they're UHF radios operating
duplex; nothing new there. (Car phones have been around since at least
the early 60s; my dad had a 150 MHz phone in '67.) The internet is
not too exciting, either. (Most of my CW DX buddies around the South
Pacific have neither cell phones nor computers; I'd have a bit of trouble
playing chess with them if I had to depend upon your "exiciting" new
communication modes!)

Are we losing steam? Back during the 1979 WARC we were awarded three
new HF bands (30, 17, and 12m) yet we had fewer than half the number of
hams we have today. We can get along quite well with fewer numbers.

>Our government has
>demonstrated a willingness to auction off underutilized radio spectrum to
>the highest bidder. If there aren't enough amateurs to justify and defend
>our frequency allocations, they will certainly be diminished.

The Techs (traditionally, folks interested in only V/UHF) are supposed to
be busy performing their R&D work so we don't lose any spectrum; that was
the whole reason for creating the no-code version of that license.

>Does anyone really think "lowering the standards" to 5 WPM code for HF
>phone privileges will result in a massive influx of CB-type operators?

Yep.

>I don't think so! Rather, people with a genuine interest in radio will be
>given a chance to experience the thrill of making their first DX phone
>contact.

They can currently experience that same thrill using CW. Or are you really saying that it's the mode, not the distance, which will whet their appetite? If so, they can use phone on 10m right now; plenty of world-wide DX on the band as we type.

>Personally, I think we should retain the Novice, but add Novice
>HF phone sub-bands in 80, 40 and 20 meters, and dump the Extra Class.

They've already got CW privileges on those bands; plenty of DX as close as their fist.

73, Jeff KH2PZ / KH6

816. BayGen generator sold separately?

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-09 00:00:00 UTC
From: zaax@aol.com
Message-ID: <1998080900480800.UAA14582@ladder01.news.aol.com>

Com'on Tracy. It takes me years just to get my wife to agree on
studying the licensing material. She is neither technically oriented,
nor interested in wireless 2 way communication (except the cordless
phone at home). All I want for her is a ticket to talk to me while I
am on my way to/from work.

Hamming is not her primary interest, nor getting on HF. But why
generalize when some people might just enjoy chewing the fats? She
doesn't hate code, she just doesn't need code -- at least for now.

Not all Techs hate code. Not all Extras love code.

Actually, QST has run ads for antennas with resistive loading for at least the past years (B&W comes to mind.) QST would willingly accept an advertisement for that "magic antenna matcher" if the manufacturer were to advertise it for what it is. There is a big difference between a manufacturer who advertises and antenna by showing the resistor that is used to make it more broadband (albeit more lossy) and a manufacturer who advertises a group of high-power resistors as an "automatic antenna matching circuit." In the former case, hams are aware of what they are getting; in the latter case, many will be misled.

IMHO, in the context of what hams consider to be an antenna tuner, resistors do not a matching circuit make.

This was Sent to me.
Enjoy
Zeus

It's time for the Amateur Radio "Person of the Year" award. So far we have Three eligible candidates and Zeus98 is pooling the votes. The results will be known this fall.

To be eligible you must have participated in the ARRL VE test session in West Palm Beach, Florida. Before voting Zeus98 suggests that you read the "Something Smells in West Palm Beach" and "It Still Smells in West Palm Beach" postings.

Here are the Candidates:

Manny Papandres W4SS. Manny was nice to set a handicapped person up for failure at an ARRL VE testing session and also referring to Italian Americans as "WOPS" at an ARRL VE test session.

Walter Peace WD4IUD. Walter just likes to call amateurs at an ARRL VE Test Session "Your Just Shit". Walter also likes to distribute electrical components to local hams. Many are thankful to Walter and Palm Beach County for these nice gifts.

T.Graf Buckenmaier KG4U
Graf likes to call people "Mentally Incompetent", and he has been the head Liaison at the ARRL VE test session where Manny and Walter showed their kindness.

As you can see this is going to be a Tight Race, so we will allow the Chicago Style of Voting, "VOTE EARLY AND VOTE OFTEN".

Suggested prize donors might be from• The Palm Beach County Sheriff, The FCC and the ARRL.

ANYONE ACCEPTING COUNTY GIFTS FROM WALTER CANNOT VOTE. That means many of the HAMS in Palm Beach County.

826. Re: Hobby-Starting a radio station

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-10 00:00:00 UTC
From: Ken Hansen <khansen@pluto.njcc.com>
Message-ID: <6qndulohs1@mars.njcc.com>
Source record: 165037
Cross-posted to: alt.radio.broadcasting.open,alt.radio.broadcasting,alt.radio.free,alt.radio.internet,alt.radio.pirate,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.space,rec.radio.shortwave

Well, let's see here - if you want to start a "real" radio station,
you know, the kind that transmits to radio receivers then you need
to talk to the FCC regarding their policies - if you want low power,
then Part 15 is all you need to concern yourself with (100 mW, your
antenna under 1 meter long). If youwant anything larger, say,
500 Watts and up, then you will need to get with a communications
consultant/lawyer and start the process...

If you want to start an Internet radio station, one that broadcasts
packets across the internet to other computers, then what you will
probably want is a recent copy of Red Hat Linux (which includes a
copy of RealAudio Server software) and then work on getting a good,
high-speed internet connection and a permanent IP address.

Please clarify which you want to establish, neither are cheap.

If you want to set up a pirate radio station, i.e. one that is
not licensed, then youshould checkpout rec.radio.pirate (I think
that is what the group is called).

Good luck,

Ken
khansen@njcc.com

Bet he has to shave his unibrow into two separate eyebrows like they all do.
And the ARRL fired Burt ? Ahhh, what do I expect from a bunch of pale faced
dope smoking WASPS who are controlling the flow of information from the FCC on
restructuring at this very moment.

Here is a Web page I set up with Sound Clips and Information on our Jammer and Lawless Hams Problem.

http://members.xoom.com/ke4jcd/bigbird.htm

I feel that we should Fix this frist fix this before we drop and remove the code test. For I for one will not up-grade knowing it going to end up like the CB. For all that time you have to spend to learn to get your License and then cost of Radios, Towers, and Ants. You end up buying your way into another CB band. I know the problem is not bad YET! But like the CB over 15 years ago it to was not bad as it is today. Soon if not fixed we too will be CB band. Lets work at cleaning up our bands then lets talk about code.

833. NPRM Released (Restructure)

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-10 00:00:00 UTC
From: K0HB@usa.net
Message-ID: <6qno40$nc3$1@nnrp1.dejanews.com>
Source record: 165044
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

The FCC today released the Notice of Proposed Rule Making in WT Docket 98-143. The comment deadline is December 1, 1998; reply comment deadline is January 15, 1999.

At first glance, the proposal is pretty much a non-event.

Here are some of the proposals in the NPRM

Reduce the number of license classes from 6 to 4. The surviving license classes would be Technician, General, Advanced, and Amateur Extra.

Novices are proposed to be grandfathered, with comments sought on whether their privileges should be kept the same as now or modified by removing the frequency restrictions on their use of CW in the 80, 40, 15 and 10 meter bands at up to 200 watts.

The Tech Plus license is proposed to be phased out, with "old" Technicians (those licensed before Element 3 was split into 3A and 3B, in March 1987) grandfathered to General and the rest eligible for General upon passing Element 3B.

Provide greater opportunities for Volunteer Examiners. ARRL had asked, in RM-9148 back in 1996, that Advanced licensees be permitted to give General exams. The FCC proposes this, and also proposes permitting Generals to give Technician exams.

Phase out RACES licenses by not renewing them. There are only 249 RACES licenses extant, and the licenses do not convey any privileges that are not also available to any amateur station that is properly registered with a civil defense organization.

The Commission also:

Seeks comment on the Commission's enforcement processes.

Seeks comment on telegraphy examination requirements. The Notice quotes from the ARRL 1996 survey, then asks for comment on "all aspects of the Morse code standards used in our examinations." Comments are sought on whether there should be three different levels of proficiency, as now, or whether these should be reduced to one or two -- and if so, what the levels should be; whether a reduction in the required Morse code elements should be offset by material on the written examination "to ensure a working knowledge of the newer digital technologies which, in part, are replacing the Morse code"; whether the FCC should consider specifying the method of examining for Morse code proficiency, such as requiring fill-in-the-blank or copying one out of five minutes sent, "instead of allowing VEs to determine how to

test for code speed".

Seeks comment on the written examination requirements, as well as the amateur examination process.

Dismisses a few miscellaneous petitions as "repetitive" and as lacking sufficient justification even to assign an RM-number.

MT500, VHF, H33BBU3144A, 4F, dual PL, 5 watt, omni, universal, with batteries, antennas, elements for one simplex channel and a rapid charger. $140.00/pair 1pr available
MT500, UHF, H34BBU6184C, 8F, 565 DPL, 4 watt, omni, universal, now on 463.875 simplex, includes one xmt. element for 468.875 and 3 xtals for 468.875. Each unit with battery and antenna. $290.00/set of 4 with 6 unit rapid charger.
MT500, VHF, H23BBB1124A, 4F, omni, no battery, antenna or elements. Parts radios. $10.00 ea. 2 available
HT220, VHF, H23FFN1100E, slimline, no battery or antenna. HS w/xtals for 165.0625 $10.00 1 available

Battery chargers:
Base:
NLN6804A or C MT500 and HT220, omni, std. $20.00 1of ea. available
NLN8005A MH70, Handicom, std. $15.00 2 available

NLN4570C MT500 or HT220, 12 unit, omni, rapid. $100.00 1 avail.
NLN4562C MT500 or HT220, 12 unit, omni, std. $90.00 1 avail.
Mobile:
NLN4472A MT500 Convertacom w/T.O.T. $20.00 1 avail.
NLN4781A MT500 Convertacom w/sidetone $ 20.00 3 avail.

Remote speaker/mikes:
For MX300: NMN6070B, NMN6071B, For EXPO: NMN6100A (new, no connector on this one). $20.00 1 of ea. avail.

Radios, mobile:
MAXAR 80, D43TSA6000AC, 155.205mHz, 546 DPL code, w/two mikes, power cords and locking type mounting brackets. $35.00 each or three for $95.00 3 avail.
Mocom 70, U44BBN3100A, 452.175/457.175, 7A PL, with pwr/cont. cables, control heads, mics, (2) spkrs. $35.00 each or three for $95.00.
Note: sets of cables, heads, spks, mikes avail. at $20.00/set, two avail.

Base stations, etc.:
L51TRB3100RM, 33.080mHz, PL 173.8, w/TMN1008C mic. $35.00, 1 avail
L34MHB3104AM, SP1, UHF with desk mic. $50.00 1 avail.
L34LHB3100AM, SP1, UHF with microphone. $40.00 1 avail.
Moden 36, Tone grp. 2 upper, E08ENC0036Al, $28.00 1 avail.
GE low band, 2F, ca. 47mhz solid state base station consolette style. $40.00

Telephone Remote Controls (for DC control of base stations):
T1377A 117vac/12vdc, w/manual $55.00 1 avail.
T1380A 117vac, w/manual $50.00 1 avail.

Channel elements, PL tone reeds and PL tone elements:
Various available for Motorola, RCA and GE, portables, mobiles and bases
at from $2.00 to $10.00 each. Please tell me your needs and I'll have a look.

Common misnomer: if it's on the internet alone, it's by definition, NOT a
RADIO station, as the signal does not travel over radio waves as its primary
path of travel.

Good luck!

I suppose not!

>Not all Techs hate code. Not all Extras love code.

I can't help but think that when people commonly get Ham tickets in the name
of expediency instead of through a genuine interest in the hobby, then
Amateur Radio is being treated like CB.

That can't be very good for Amateur Radio.

[cross-posted to a couple of other groups interested in old Heathkit kit..]

I would really want to get one of the late-'70s TV kits now, and build it
from bottom up. The best I have been able to do lately is find ones at ham
fests and overhaul it.

The only company I know still doing kits is Jameco electronics, and they
only have the small simple projects. I still take pride in my old Heathkit
hi-fi receiver (100watts a side, still excellent), metronome (my first kit),
and still have my old H8 computer with its H19 terminal, and my old H151
XT-compatible. But I miss my weather station (practically gave it to a
radio station I was once an engineer at), magnetic-cartidge RIAA preamp,
and the matching pair of indoor/outdoor themometer and an alarm clock (the
clock was modified with another kit to receive the NIST time-clock signal
and keep within 0.01 seconds, and sent out a serial pulse sequence that

synchronized other alarm-clocks of the same model that acts as slave units)
-- these all got sold to support my education.

I just picked up an old 1960's vintage mic-preamp and phone-patch unit that
I am going to fix up (all tubes) at a local ham-fest. You can still find
goodies at ham-fests; the best ham-fest, IMHO, is the Dayton (OH) HamVention.

Hello everybody,

I am visiting Berlin, and I can't seem to get the repeaters to work for me.

I have a valid reciprocal permit, but they didn't provide any repeater info
for me.

I can hear activity on both 2m and 70cm, but they don't appear to be using
the same repeater splits of 600 kHz and 5mHz respectively.

Can anyone give me the input / output and PL tones of repeaters in Berlin ?
Or at least what Germany uses for repeater offsets..

Please reply via EMail as well as to the group as I may not be able to read
the group reliably from here.

Thanks,
Reddy Biggs

x-no-reference:yes
ï¿½Tired of not being able to get on the air when the wife and kids are using the telephone or computer? Let my RFI Filters solve your problems for good. - Modular design - Simple install - Many in use in Amateur radio and CB service. $20.00 shipped USA check or MO. Rich Whiten, 343 Two Notch Trail, Easley, S.C. 29642. Or (864) 855-5206.ï¿½

If you are one of the persons who has been swindled by this party, at any time in the past or present, the Attorney General of the State of South Carolina would like to hear from you. Mr. Whiten has allegedly sold $20.00 electronic devices known as "RFI Filters" that contain nothing more than about 60 cents worth of useless surplus electronics parts. Mr. Whiten claims to have a ï¿½patent pendingï¿½ on these devices. That claim is false. A search of the US Patent database yields no such patent application or any past patent activity by Mr. Whiten. If you have purchased one of these devices then you should immediately demand that Mr. Whiten return your funds. If he refuses, then contact:

http://www.scattorneygeneral.org/contact.html

or write directly to:

info@scattorneygeneral.org

Mr. Whiten has a long history of shady dealings with hams and CB'ers. He is currently wanted by the state of Florida on an outstanding felony warrant stemming from his illegal business dealings in that state. Use extreme caution when dealing with Mr. Whiten. He should be considered armed and dangerous. He often boasts about carrying concealed weapons to hamfests and swap meets with the intention of ï¿½sending home in a body bagï¿½ anyone who he dislikes. He does not have a permit to carry a concealed weapon in any state nor does he have a license to do business in any state. To verify Mr. Whitenï¿½s penchant for carrying illegally concealed weapons at hamfests contact dtolassi@us.ibm.com

File your complaint against:

RICHARD L and IDENE WHITEN
343 TWO NOTCH TRAIL
EASLEY SC 29642 USA

In recent weeks, Mr. Whiten has recruited and employed several hireling amateur radio operators to post false testimonials that supposedly vindicate his ï¿½RF Filtersï¿½ and him. Take note that his paid cronies were responsible for all of the false ï¿½praiseï¿½ postings on the Internet. This can readily be ascertained by listening any evening on 3901 kHz LSB. You will find Mr. Whiten there, along with the identical persons who made the false claims for his bogus ï¿½RF Filtersï¿½. These hired accomplices are on Mr. Whitenï¿½s payroll.

++++++++++++++++++++++++++++++

FEDERAL VIOLATIONS

Please note that Mr. Whiten placed these advertisements:

ï¿½Sell: Texas Star 667DX solid state amplifier, 10-11meters 800 watts out. Has 1-2290 driving 4-2879's. Brand new $360 (can be made to run 2-30mhz.) Richwhiten@aol.com or (864) 855-5206ï¿½ [USENET]

ï¿½Custom built CB solid state or tube amplifiers for 10-11 meters. 400 to 8000 watts output. Send for pictures of my amplifiers or see them @ www.homestead.com/users/goodfellows6/goodfellows6.html Reasonably priced. Listen for me on 27.665 LSB using my latest 5 KW amplifier. Richwhiten@aol.com or (864) 855-5206ï¿½ [CB WORLD]

ï¿½FS- Texas Star S/S AMP 800 WATTS 10-20 meters can be made to run 10-160. Brand new in the box (really) richwhiten@aol.com or 864-855-5206 13.8vdc@ 75+ Aï¿½ [USENET]

Manufacturing and/or marketing of these amplifiers are a violation of U.S. federal law and grounds for revocation of Mr. Whitenï¿½s amateur radio license (WB2OTK). Mr. Whiten is a habitual offender that has previously been cited by the FCC for numerous offenses. These actions against Mr. Whiten include the issuance of an NAL for $10,500 for willful and malicious interference caused by one of his ï¿½custom builtï¿½ amplifiers. To file charges or issue a complaint contact the Federal Communications Commission at:

rlee@fcc.gov

Tell the FCC that you want Mr. Whitenï¿½s illegal activities to cease. Tell the FCC that you want all of Mr. Whitenï¿½s unpaid fines to be collected. Tell the FCC that you want Mr. Whitenï¿½s amateur radio license to be revoked for just cause. Tell the FCC that you want all of Mr. Whitenï¿½s illegal amplifiers and bogus ï¿½RFI Filtersï¿½ to be confiscated.

Such elocution, I bet you're a hit at the "Night Train Toastmasters" meetings. I know you're one bitter little failure, desperate for any help you can get, but that no reason to openly tongue Herbie's bunghole like that. What's next for you, Cheetah, will you be displaying your ripe red posterior to Marion in some sort of bizarre public mating ritual? Grooming the ticks and fleas from Queenie's hairy back with your teeth?

>Do you even have radio equipment?

Yes, and unlike you, I didn't steal it. It just goes to show you how anal-retentive O' Witless really is though. A good enema might help although by now it's ingrained
in Jimmy O' Browneye's "personality."

Gee, what a crushing defeat for the No-Code Agenda.

The NPRM doesn't specifically make mention of, as part of the
restructing to 4 license classes, reduction of the code speed to
5WPM for the General-class license? It doesn't specifically make
mention of reducing the high-level code speeds to 12 WPM?

Oh, what a crushing blow for all of those promised free Bread and
Circuses by Ready Freddy. LBIMCLMAO.

Hey Mark: Better break out that book on victimology. Looks like you're
gonna be learning code to get on HF! Yee-Ha!

>Gee, what a crushing defeat for the No-Code Agenda.

Hardly, By no means a victory, by no means defeat, just
defining, at least, and at last, the battle field for us to fight on.
Yes we had hoped for better.

>

It is not clear if that means the feild is open meaning that
ProCoders would have to support their desire for a Code test, or just
what is going on. I suspect that FCC has pulled another rabbit along
the lines of the Consenous dogde out of the hat to avoid the issue of
exposing there real intent wether ProCode or NoCode. As Such I salute
them for being clever. I admire clever. And prepare to do battle.

He said Morse change were being considered well at least they
being entertianed which is a step up from what we have seen in the
past
>
>Oh, what a crushing blow for all of those promised free Bread and
>Circuses by Ready Freddy. LBIMCLMAO.

This is another lie on your part. (assuming by freddy you
mean W5YI) he never promised us victory at this stage, he stated his
beliefes as almartmist proCoders have spread the idea that it was done
deal that 1 or 2 classes and No Code was the FCC's position. and all
this assumes that a Just and Proper license system is "Bread and
Circuses"

>

Good summary of the NPRM, Hans.

Those looking for the complete text may want to keep an eye on
http://www.fcc.gov/Bureaus/Wireless/Notices/1998/ as the NPRM will
likely appear there soon. (I'll also put it on the ARRL Web site as soon
as I get it in electronic form.)

BTW, it's curious isn't it: According to messages from various parties
I've seen in these NGs over the past month or so, the FCC was certain to
propose a 3-class structure, a 0/5/5 Morse requirement, on a fast-track
comment period, and would accept only minor changes to its proposal. Yet
none of that appears in the NPRM. Seems like some people who confidently
assert knowledge of what the FCC is going to do should ponder the
reliability of their sources.

No, but consider this: The NPRM proposes to eliminate both the Novice and Tech-plus classes. Which means that the General will become the entry HF license. While the NPRM doesn't preclude that the General will still require 13 WPM, do you really think there won't be a 5 WPM HF license?

> It doesn't specifically make
> mention of reducing the high-level code speeds to 12 WPM?

Nope. The FCC is soliciting comment on the entire issue of Morse speed levels, including how many levels there should be and the specific speeds thereof.

856. IPS Daily Report - 10 August 98

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-10 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <6qnu3l$lcc@flare.syd.ips.gov.au>
Source record: 165067
Cross-posted to: aus.radio.amateur.misc,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 10/2330Z AUGUST 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 10 AUGUST AND FORECAST FOR 11 AUGUST - 13 AUGUST
STATUS INDICATORS SOL:** YELLOW ** MAG:** RED ** ION: GREEN

1A. SOLAR SUMMARY
Activity 10 Aug: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 10 Aug: 149/104

GOES satellite data for 09 Aug
Daily Proton Fluence >1 MeV: 2.4E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 4.20E+07 (normal)
X-ray background: B7.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
11 Aug 12 Aug 13 Aug
Activity Low to moderate Low to moderate Low to moderate
Fadeouts Probable Probable Probable

Forecast 10.7 cm flux/Equivalent Sunspot Number for 11 Aug: 150/105
COMMENT: Isolated M class flaring expected. Solar wind speed
unexpectedly increased to over 500Km/sec during the interval 0100-0500UT
on 10 August.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 10 Aug: Quiet to unsettled

Estimated Indices 10 Aug : A K
Learmonth 11 3232 3232
Fredericksburg 9
Planetary 10

Observed Indices 09 Aug : A K
Fredericksburg 2
Planetary 4 1011 2221

2B. MAGNETIC FORECAST
Date Ap Conditions
11 Aug 10 Unsettled
12 Aug 20 Active, minor storm periods possible

13 Aug 17 Active
COMMENT: Quiet conditions were expected on 10 August, however field showed very mildly disturbed character after 0100UT on 10 August (probably in association with elevated win speed). IPS Geomagnetic Warning 25 was issued on 10 August and is current for interval 12-13 August. Recurrence and dissappearing solar filament suggests that active conditions can be expected during second half of 12 August (minor storm periods possible during local night hours). Activity is expected to decline by second half of 13 August.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
10 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
11 Aug Normal Normal Fair
12 Aug Normal Fair Poor
13 Aug Normal Fair Poor
COMMENT: Good HF conditions expected for 11 August. High latitude HF conditions are expected to be degraded during interval 12-13 August.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
10 Aug 71

Observed Australian Regional MUFs:
Regional MUFs near normal with the exception of
Darwin which was 15% lower than predicted
monthly values.

Predicted Monthly T index for August: 83

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
11 Aug 70 near predicted monthly values
12 Aug 70 near predicted monthly values
13 Aug 70 near predicted monthly values
COMMENT: HF comms expected to be good until 12-13 August. High latitude (southern region) conditions are expected to become degraded during this interval, especially during local night hours.

Yes, yes, yes. You had to answer 1 question about mode that I am interested
in, and 2 questions about modes that neither of us are interested in. I had
to demonstrate a -proficiency- in a single mode that you are interested in,
but I have no interest in using.

So whats your point?

If you don't like a democracy, I can suggest several QTH's with lotsa
government and some QTH's with very little or no government. Personally, I
vote for things I agree with.

Brian/N0iMD

TIMMY VOLZ, KK7HO, THREATENED TO KILL W1WCR, VICTOR MISEK ON A RECENT EVENING ON AMATEUR RADIO. PROTEST HIS ILLEGAL DEATH THREATS BY SENDING YOUR COMPLAINTS TO THE FCC AND DEPARTMENT OF JUSTICE. HIS DEATH THREATS ARE ILLEGAL AND SHOW TERRORISTIC BEHAVIOR

Tiny Tim thinks he is a big man but his signal is rather weak and pitiful for jamming. Therefore he has to sit in the background and direct the jammers since he can't really make an impact. Timmy is known as Commissar HO and he is definitely the HO of amateur radio. He tries to spin doctor others comments and conversations in order to make others look bad. He likes to be the chief over the frequency and control others free thoughts and personal expression of opinions.

There is more, Check it out for yourself!

863. The Great Liberty Net Support Page:

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-10 00:00:00 UTC
From: n0vfp@my-dejanews.com
Message-ID: <6qlqaeahk1@nnrp1.dejanews.com>
Source record: 165146

Here is part of the main page.

WELCOME TO THE LIBERTY NET SUPPORTERS HOMEPAGE

A BIG WELCOME FOR AMERICANS CONCERNED ABOUT THE FALL OF OUR NATION AND THE RIGHTS OF OUR PEOPLE

THIS PAGE IS FOR INDIVIDUALS WHO WANT TO THINK FOR THEMSELVES AND RESIST OTHERS DOING EVERTHING FOR THEM FROM CRADLE TO GRAVE. THEREFORE, CONTINUING THIS PAGE MAY BE DANGEROUS TO THOSE WITH ANTI-AMERICAN AND PRO ESTABLISHMENT MINDS WHO EXPECT TO BE BABYSIT

SUPPORT YOUR LIBERTY NET SUPPORTERS GROUP. YOU CAN DO THIS IN A VARIETY OF WAYS. PROVIDE INFORMATION, COMMENTS, SUGGESTIONS, IMPROVEMENTS, AND GENERAL CORRESPONDENCE TO THE PAGE AND ITS SUPPORTERS TO KEEP OUR HERITAGE OF LIBERTY AND PERSONAL FREEDOM FROM GOVERNMENT CONTROL

The purpose of this page is to inform the general public and amateur community about the tragedy, immorality, and criminality that is leading to the downfall of the greatest nation in the history of the world and that being The United States of America. Liberty Net supporters also want to expose the evil agenda of the spin doctors and puppet masters who want to destroy the United States and the god-given Constitution and Bill of Rights enjoyed by the people. We also want to expose the atrocities occuring in amateur radio by various undesirable and degenerate characters who have a political agenda and violate the rights of others in addition to the rules. Our grouping is not ran by any Liberty Net member or participants for those who would see this as a page created for the benefit of the Liberty Net. This page is not the creation of a lackey or group of lackeys like our dictatorial and conspiratorial enemies would have you believe. Unfortunately, there are those critics who see this page as a creation of the Liberty Net and its main participants. Their assumptions are incorrect and invalid and very misinformed. This page is not directed by or affiliated with any members of the Liberty Net. We are an independent group of individuals who want to show our support for the Liberty Net and its climate of free uncontrolled speech. Unfortunately, our critics and oppressors want to shut down all avenues of free speech and expression especially political speech. These anti-freedom groups and individuals try to do this by jamming radio frequencies. These nefarious characters also spam newsgroups and the email accounts of countless people for no legitimate reason. However, we will continue the fight against those forces of darkness who want to oppress the general public and amateur community into their global plantation in which rights will be granted by the state if any are granted. However, those rights will be severely limited and destroyed by our common enemies and oppressors who want to enslave our nation and its people in chains. Let's fight back and break free from these tyrants and their nefarious plans for our people.

There is more, Please go to

http://www.angelfire.com/ky/libertynet/

and see for yourself!

Don't give them EVERYTHING! There are LOTS of options, but what is key is the ability to CONVERSE on phone with hams of all license classes around the world. Give them a CHANCE to get bitten by the DX phone bug, and dangle more bandwidth and power in front of them, and they WILL upgrade. Right now, Tech Pluses are CUT OFF from HF phone below 28Mhz, and this is NOT a good way to entice or facilitate encouragement.

It's the seperate Advanced and Extra class I think ought to be eliminated. For instance, I would have proposed something like this:

CLASS Frequency Allocations Exam Elements Required
----- --------------------- ----------------------
A All frequencies 1C, 4A + some 4B
B General & Advanced 1B, 3B + some 4A
C General, limited to 100w out 1A, 2, 3A + some 3B
D No code Tech & Tech+ 10m phone 2, 3A

Extras become Class A, Advanced become Class B, Generals become Class C (with power over 100 watts grandfathered for existing licensees), and everyone else becomes Class D. You must pass the revised written elements to get the next higher class of license. Noone but the very few Extras lose ANYTHING, and they only lose exclusive use of very small sub-bands!

o This makes the "advanced" class A truly something special without reserving HUGE portions of bands for only a few.

o It gives Generals access to the large Advanced sub-bands in exchange for a harder written exam.

o It gives Tech Pluses power-limited access to General HF phone & CW bands in exchange for a harder written exam.

o It gives no-code Techs access to 10m phone in exchange for some HF questions. (or maybe not depending on International agreements).

Sure, this isn't perfect, but the details can be worked out. I'd like to see EVERY class of Amateur licensee able to have the thrill of HF phone DX contacts, sampling the full range of operating experiences.

> Tech licensees have been successfully upgrading for years without having
> HF phone priveleges. Why do you think they will stop upgrading now??
>
Read QST... They are NOT upgrading in sufficient numbers to keep this
hobby healthy. I'm not talking about "dumbing down". I'm talking about
giving someone who demonstrated 5WPM CW proficiency some HF phone beyond
the token privileges on the sporadic 10m band. What is the BIG DEAL!

> And....the only way that "US code requirements are out-of-line with the
> rest of the world" is that we use a graduated system to establish
> "incentives" to improve oneself. The "rest of the world" requires CW
> for amateur licensing - now some of us are proposing to eliminate the
> requirement. It seems to me that the US would then be the one who is
> out of step.
>
I wasn't suggesting the elimination of the code. It DOES serve a purpose.
However, I am arguing that the current license structure is flawed because
it isolates an entire group of hams in the VHF/UHF portion of the spectrum
just because they don't want to use CW. Why make people become proficient
at the difficult 13WPM level just to use HF phone? This is a hurdle for
the sake of a "weeding-out" factor that is totally unnecessary. There will
NOT be a huge influx of CB operators if you retain the 5 WPM requirement.
If there is a huge influx, it will be made up of people with a genuine
desire to progress in radio.

> The whole CW discussion is only a red herring to justify the avoidance
> of applying extra effort to gain extra rewards.
>
Baloney! I worked hard for my General, and I don't like the idea of
giving a General ticket to Novice and Tech Plus operators who haven't
demonstrated knowlege by passing General written elements. I am suggesting
that we ought to open the HF phone "door" to tens of thousands of dis-
enfranchised Tech Pluses out there. Give them a taste of what they are
missing, thereby creating incentive instead of RESENTMENT.

Current comment on the ARRL proposal is running 2 to 1 in favor of...
If we don't make alternative suggestions that make sense, you might
not like the alternative.

Regards,
- Mike, N9EUZ

Ah, yes-you beef up a test by reducing the requirements needed to pass it.
Yeah, Right!

> The sour grapes that I hear from a few is because they mistakenly
> substituted Morse code skill for electronics knowledge

That's been your story all along and I'm sure you're sticking to it, as
wrong as it has always been. The REAL issue has always been
Communications Capability and you all know it. Since you never made
it up to 20wpm and Extra class, you had to have some rationale to use in
your quest to destroy CW. You even claim to *like* it.

> and now they
> won't be able to feel superior to the advanced class RF engineers
> anymore.

Wanta bet? I feel my CW skill will *always* be superior to yours.
Engineering has never had anything whatever to do with it.

>
>
> The 20wpm requirement developed into a few extras who felt superior
> even though they were, in reality, inferior. That seems pretty
> obvious from some reactions on this newsgroup. Those guys will now
> be forced to put up or shut up - a definite improvement

So what you think, we're all gonna lose our Extra tickets? Even if that were
so, it'd be no proboem, it's VERY easy to memorize the word associations
and pass it all over again. No long hours of intensive study nor long
sessions of copying code practice this time..... just ease into it.
Some "enhancement".

We've "Put up" with the NoCode drivel long enough, it's true....

What should we do, welcome a change which only serves to make it easy for
anyone who can easily memorize question/answer associations to gain the
highest level of ham radio? That's an improvement or betterment of the
ARS???? That will "Improve the techincal capabilities of Extras"? What are
you, one of those "Fuzzy Logic" guys??

870. Electronic QSL?

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-10 00:00:00 UTC
From: Ari Husa <ari.husa@iki.fi>
Message-ID: <x1n29dl5jc.fsf@ws2.kolumbus.fi>
Source record: 165153
Body handling: 3 inline base64-encoded payload blocks were not displayed

Hi,

I wonder if anyone is planning to form a standard for an electronic QSL yet. In my (very humble, of course) opinion, it could offer considerable benefits for big DX operations, or contesting, for example.

Those of you interested, please, read this pre-pre-pre-draft and comment!

I have received a tentative 'yes' for electronic QSL acceptance for certain OH awards IF suitable system is created and spread widely enough. Nothing official, though.

If there is no project already going on, maybe an ad-hoc project group connected by a mailing list would be called for?

Yours,

Ari Husa, OH2NUP

EQSL - Electronic QSL, Enhanced QSL

About this document

This document is the very first draft of the motivation for what could eventually grow to become a standard for an electronic QSL card. Make no mistake, at the point of writing there are NO applications creating, or using, the EQSL. Nor is the EQSL concept officially accepted anywhere.

The information below is intended merely to introduce the concept of EQSL, to raise discussion about the subject, and to provoke suggestions. It is also not intended to act as a formal document (did I need to say that?). To all OH amateurs, my apologies for not providing a Finnish version at this point.

GOAL:

The goal of an electronic QSL card is twofold. First and foremost, it should provide a reasonably secure method for confirming an amateur radio contact, very much the same way a regular paper QSL card does (but better). Secondly, it may offer new attractive features, such as

- delivering the cards electronically as data, fast and affordably

- automated handling of QSO and QSL data

- enhanced reliability of the validity of the QSL

An electronic QSL should also be

- possible to generate with tools that are either public domain, freeware, or programmable by amateurs themselves

- reliably transportable in as many and archaic data communications methods as possible (yes, even packet radio)

- upgradable when additional needs arise

- small; if transferred by archaic methods of data communications (yes, packet radio), the bandwidth may be severely limited

What is an EQSL?

Essentially, EQSL is just a preformatted text file with a limited character set (a series of octets of a given range of value, to be more exact). The information stored includes version data and the actual QSO data (a bit like your logbook entry). The file may be created by hand or by conversion from popular log program file formats, for example.

A text file with QSO information is rather easy to forge, of course, and therefore additional measures are called for to prevent tampering. A checksum is calculated, and the message is electronically signed (signature data is added to the file). My proposed method for signing the EQSL is PGP (Pretty Good Privacy), since it is rather widespread and obtainable for free for several computer platforms and operating systems. Other methods may be introduced later, of course.

The whole package is then wrapped in a 'ASCII envelope' to make it more robust against various transport quirks. This is conveniently done by the same PGP application. The result is a few lines of seemingly 'gibberish' data (a bit like 7PLUS files, if you are a packet person) with proper PGP header lines.

What does EQSL say?

The method of authentication used is not perfect, of course (nothing is), but given the algorithms used in PGP signatures, it can well be said that it offers much much better validity check than in the case of a printed cardboard version. Specifically, it can be said with reasonable certainty that

- the card was sent by the person who signed it
- the card was not changed in any way during transport

What does EQSL NOT say?

Specifically, this method does NOT

- ensure that the QSO was actually made

- ensure that the signator was one of the operators, or a valid QSL manager

- encrypt the data in any way (encryption is forbidden in amateur radio traffic)

For additional authentication, QSO and signature validation databases, public key servers, etc. may be created. I leave this aspect to be discussed later; one could say that they form a higher layer of electronic QSL'ing system. Suffice to say, many nifty features that came into mind were (and should be) intentionally left out, because they simply do not belong here.

EQSL format

When thinking about the file format, the most important aspects are flexibility and file size. The PGP signature and the ASCII envelope grow the file anyway, so when there is only one QSO per file, the format does not matter that much (PGP compresses the file before converting to ASCII) .

My first thought was colon-separated header-value pairs like this, separated by newline characters (familiar for those of you dealing with RIPE database, for example).

```
Version: 0.01
StartDate: 199808061230
StopDate: 199808061245
From-call: oh2aq/m
From-dxcc: oh
From-locator: kp20le
From-operator: oh2nup
To-call: sm2lzk
Tx-Frequency: 3694.0
Rx-Frequency: 3694.0
Tx-mode: j3e
Rx-mode: j3e
ReceivedReport: 579
GivenReport: 599
Remark: ohc 210
Remark: oper Viljo
```

Now, it is open to discussion, whether this is the best way or not, and which field should be optional and which ones mandatory. Another matter is how to extend the format for local features requiring confirmation (IOTA numbers, OH County numbers, British grid squares, U.S. States, ITU zones, CQ zones, and so on). In any case, it is not a good idea to include any information NOT relevant to the QSO. EQSL should NOT be a log format. Thus, the 'remark' lines may as well be obsolete.

There seems to be quite a lot of overhead, as well, in this approach, and confirming several QSO's in one file may lead to ambiguity. Another possibility would be to include all data in colon-separated

fields on one line, something like this:

0.02:9808061230:9808061245:oh2aq/m:oh:sm2lzk:3694:3694:j3e:j3e:579:599:kp20le
(version:start:stop:from:dxcc:to:txfreq:rxfreq:txmode:rxmode:sent:received:locator)

Maybe even best of both worlds (here allowing for multiple QSO's in
one card)

Version: 0.03
Data:0.02:199808061230:199808061245:oh2aq/m:oh:sm2lzk:3694:3694:j3e:j3e:579:599:kp20le:ohc
210 oper viljo
Data:0.02:199808061245:199808061252:oh2aq/m:oh:oh3bu:3694:3694:j3e:j3e:579:599:kp20le:ohc
210 oper jari

I am not sure if allowing multiple QSO in one card is a good idea
anyway. Please comment. Also, thinking of all possible data to be
needed of a single QSO is difficult. Please, do comment on what should
be on the card and why.

I am, of course, also interested to hear about any other electronic
QSL standardization projects, if there are any. It is unwise to invent
the weel more than once.

And finally, two examples of the cards above, signed by me and wrapped
in PGP's ASCII envelope. If you have PGP available, they should be
easily opened and checked.

I don't think I would fit in as "code people" or "code haters", either one.
I hold a general ticket (salute!) and though I enjoy HF, I spend the bulk
of my time on VHF/UHF, like most Hams.

What you want to do requires FCC licensing, and the cost of such licensing is of corporate proportions. Secondly, even legal, unlicensed FM stations have a limit way under 1 watt, so your coverage might be a couple of hundred feet away from your house on a good day, and even that might be beyond the range limit for low power FM stations. The fines for non-compliance are very heavy.

Even if you get a cheap transmitter, and a simple antenna, and some simple mixing equipment, it could end up costing you big time anyway.

The recon vehicle just returned, and the mission was
successful. James O'Brien
3910 Hiram-Sudie Road
Hiram GA 30141
Said dwelling appears to be an old one story farm house with very
faded red paint. The dwelling appears to have been the victim of a
highway widening project several years ago, as it now sits approximately
six feet from a very busy two-lane highway. Residents of this dwelling
apparently enjoy the sounds of heavy traffic, day and night. Two very
long and deep skid marks were observed in front of the dwelling, as if
someone left or arrived in a hurry. There is no garage, only a rusty
carport shelter. Antennas of every description are on and around the
house, verticals, long-wires, etc. At least two antennas appear to
have been pulled up in trees by means of rope, where they swing in the
wind. A DBS dish was in the back yard. The grounds were very poorly
maintained and need of landscaping. Two vehicles were in the rusty
carport, one red Ford T-bird and one black T-bird. The black T-bird has
a busted out passenger window. Both vehicles appeared to be in poor
condition.

Do realize that a pure gaussian noise background is worst case for
weak signal performance. A fading channel, or one with burst noise,
isn't as difficult to cope with for a well designed modulation and coding
as a pure gaussian channel. That may seem surprising, but it is true.
See _Modern Signals and Systems_ by Kwackernaak and Sivan for all
the math (you should be able to handle the math).

Well of course they will, just make sure you include sufficient postage
on the SASE. About $1.5 billion should do it. And plan on waiting a long
time for the mail delivery. :-)

The important thing to understand about Voyager and Pioneer is that they
were built with late 1960s technology. Today, we can implement the technology
they use with a couple of very inexpensive VLSI chips. That we largely don't is
an embarrassment. We could have spectacularly better performance with
inexpensive low power equipment than we currently generally obtain if we
weren't so hung up on OOK Morse.

>That you desire to constantly compare amateur radio to NASA (or to the
>military) just shows you live in some fantasy world, wanting to emulate
>something you're not. Come back down to Earth, Boys.

NASA and the military are good benchmarks for what it is possible to do, NASA for weak signal work, and the military for operation against a hostile jamming background. The techniques they use can have application to amateur radio operation as well. Often we need to operate under weak signal conditions, and at least on HF, we are always faced with noise and interference situations which are similar to the military jamming problem.

It is a pity that we have to look to these agencies for examples of good techniques. At one time amateur radio was the pacesetter for this sort of thing. But most amateurs today seem to believe that the techniques developed by their great grandfathers are the ultimate, and that any technique developed since then is worse. Of course that's false, but that inertia means we have to reach outside of amateur radio for well known examples to demonstrate that it is false.

Amateurs also seem to believe that these techniques require a complexity and expense which is beyond them. That's also false. Thanks to the VLSI and computer revolutions, these techniques, and even better techniques, are easily and inexpensively within the grasp of any amateur willing to look beyond the methods of their great grandfathers.

I suppose I shouldn't be surprised that amateurs have been so slow to adopt better techniques. They've suffered decades of brainwashing that "CW gets through when nothing else will". It took over a decade of QST beating the drum every month to get amateurs to acknowledge the superiority of CW over spark. Now, with QST still extolling CW, and rarely mentioning better techniques, and with our licensing system structured to reward CW speed as the highest aspiration of an amateur, the job of getting amateurs to accept better techniques is even harder.

These three midgets went to the Guiness Book of World Records to try to get listed for a world record. The first one has tiny fingers, and wants to be listed as having the world's smallest fingers. So he goes into the room where the judges are, and ten minutes later, comes out and says "I'm in! I have the smallest fingers in the world!"

The second midget wants to be listed for the smallest toes in the world. So he goes in, and ten minutes later, comes out and says "I"m in the book too! I have the smallest toes in the world!"

The third midget goes in, wanting to be the record holder for having the smallest penis in the world. He's in for about two minutes, and comes right back out, with a disappointed look on his face. "Who's Burt Fisher?" he asks.

887. 433MHz Power Amp. and Tx/Rx Switch Recommendation

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-10 00:00:00 UTC
From: Artur Leung <aleung@engr.ukans.edu>
Message-ID: <35CF0E30.B38A3581@engr.ukans.edu>
Source record: 165170

Hi,

I am designing a low-cost FSK transciver using a FSK transciver IC (RF Micro Devices RF2905). It can put about 5-10dBm of RF output (Vcc=5.0V) to the antenna. Do you have any recommendation on power amplifier (single supply at +5.0V) that takes the output of the transciver chip and pumps out several watts to the antenna? That amplifier would be low-cost and easy to apply. If you have any recommended circuit(s), please let me know.
Also, do you have any recommended TX/RX switch to handle this power? The transciver chip's RF TX out and RF RX in are tied together to use a common antenna. Itdoes not require external TX/RX switch to handle the RF power by the on-chip RF TX output. However, if a power amplifier is added, the receiving front-end cannot handle several watts of power and will be destroyed without an external TX/RX switch. Preferrably the switch should be operated with single +5.0V supply.
Thanks for any information!

Artur, aleung@engr.ukans.edu

> Yeah, Right!

Hi Dick, where y'all been? What I believe is that we should
reduce the *irrelevant* requirements and beef up the relevant requirements.
In my 46 years as a ham, I have searched for an opportunity to use CW
for something besides fun. I have done lots of emergency communications,
both real and practice, and have never once used CW even though it is my
favorite fun mode. The $15k Arizona Intel Emergency Amateur Radio Service
does not even provide a straight key. I had to provide my own.

>
> That's been your story all along and I'm sure you're sticking to it, as
> wrong as it has always been. The REAL issue has always been
> **Communications Capability** and you all know it.

Nope, I don't know that. The basic issue is freedom from irrelevant governmental
regulations and freedom of choice of modes in a hobby in a free country. This
secret handshake hazing ritual that allows India-like caste system delusions
of grandeur among some members of the ARS has been extremely bad for the hobby
and is appropriately about to bite the dust. Do you discount Einstein's theory
of relativity because he didn't know Morse code?

> Since you never made
> it up to 20wpm and Extra class, you had to have some rationale to use in
> your quest to destroy CW. You even claim to *like* it.

That ir"rationale" is yours and yours alone. I made it to 20wpm when I
was 15 years old and couldn't possibly have passed the extra written.
Presently, I don't want to risk the accompanying mental illness from
which so many extras suffer. :-) I do not want to "destroy CW". I want
to destroy the federal welfare support system for Morse code testing. I
do not believe in the present Morse code welfare program anymore than I
believe in the welfare program paying farmers not to grow corn.

> > and now they
> > won't be able to feel superior to the advanced class RF engineers
> > anymore.
>
> Wanta bet? I feel my CW skill will *always* be superior to yours.
> Engineering has never had anything whatever to do with it.

Sorry, I should have said, "... will not have any rational reason to feel superior". I forgot about irrationality. Some extras will actually need psychological therapy after the 20wpm requirement is dropped. Just the mention of that possibility sends some of them into an psychotic rage. CW skill does not make one a superior human being or ham. CW skill makes one superior at CW, an irrelevant skill in the modern world. You may be the slide rule champion of the whole world but nobody cares.

> > The 20wpm requirement developed into a few extras who felt superior

> sessions of copying code practice this time..... just ease into it.
> Some "enhancement".

Nope, when we are all standing around at a hamfest discussing technical subjects, they won't be able to interrupt the conversation and say, "I can do 35wpm". The response will be, "Who gives a rat's patootie?"

> What should we do, welcome a change which only serves to make it easy for
> anyone who can easily memorize question/answer associations to gain the
> highest level of ham radio?

I obtained ALL amateur frequency privileges by memorizing the ARRL License Manual in 1952 and passing the conditional exam without knowing anything about the necessary math, physics, and electronics. It tweeked my interest and eight years later I had a EE degree. I now have 40 years of electronics experience and hold patents in the field. I used the memorizable license manual and conditional ham radio license as my entry-level ticket into the field of electronics. What's wrong with that?

I know you have learned technical things since you got your extra ticket. If people are so lazy, why did you do that? Because ALL amateur radio licenses are entry-level tickets. They are not permission slips to allow you to feel superior to your fellow hams.

Sorry to hear about your good idea Ari because the ARRL will never go for it. Staffers are more concerned with QSL cards being official and at a minimum cost of 5 dollars round trip to the Honor Roll member seeking them than they are with the actual knowledge or qualifications of the amateurs.

In other words, they care more that QSLs aren't forged than that licenses are legitimately obtained and their privileges respected.

In fact, our FCC will be mandating electronic filing of ham licenses soon, but big old progressive ARRL still wants those stacks o' cards pouring through their bureau. ARRL should restructure itself into the 90's before screwing with licenses first next time.

Gentlemen,

Has anything Palerider said about the state of our bands NOT true? He, an outsider, is making an observation about what he sees is the problem with our clan, and it's a valid reason _NOT_ to get involved with ham radio, because it's no different than where he's at now. Have you NOT heard any of the trash on 75/80? I used to work HF mobile, but it's got to the point where I dont turn on the HF with the kids in the car, because i dont want them to hear the kind of language and abuse that goes on on those bands. _I_ dont want to hear it... But he's is right, the behavior on the lower bands is bad. When I demo Amateur Radio, I used to show them HF for the DX aspect, but now just stick to VHF. I dont like what he wrote, but he IS right.

Just my observation too...

> Sorry to hear about your good idea Ari because the ARRL will never go for
> it.

Well, how about taking on the good old 'watch us not care'-attitude?
;-)

If a suitable system is employed, thoroughly tested, found practical,
and spread widely enough, ARRL, as well as other conservative bodies
will go for it. Eventually.

Believe me, I do know well enough how conservative and hard-headed the
amateur community can be if it wants to, but eventually sensible new
procedures will prevail. Now, I try very hard to sound convincing
here, can you tell? :-) I know many a QSL manager would be unhappy, as
would some DXpeditions, when majority of cards would no longer include
a green stamp or two (or three, or five, or ten) in an envelope :-)

A KISS principle should be followed. Existing pieces of software
should be used as much as possible. This way integrating the puzzle
should not become too big a burden, and small test projects can be
launched quickly.

For now, I would really really like to know if there are any similar
projects on their way.

What I don't want to do is to discuss whether an electronic QSL would
be

- useful,
- practical,
- feasible or
- wanted

I know it is all of these things, if someone just goes ahead and makes
it so. And these people should be experts of both having QSOs and
creating software. And it would not hurt if they knew basics of
cryptography and data security as well.

To put it short, it is US who should do it: to define what to do, and
to put together the bits and pieces - and then see if the community
will accept the result or not. I think it will. Not necessarily in a
year or two, but maybe five, ten?

Again, comments? Any takers for the project? ;-)

> and the Code Waivers.

Yes, although the FCC didn't specifically propose any code speeds, if they don't accept any new applications for Novice and Tech-plus, I think it a reasonable assumption that they intend 5 wpm to be the entry level speed. They did, however, lump all of the current speeds under the umbrella of their asking for input on 5, 13 and 20 wpm.

I can understand the FCC's reasoning on the waivers and enforcement issues (without necessarily agreeing with them, of course. <grin>), but did want to point out that ARRL's petition wrt enforcement was never intended to give the ARRL more enforcement powers. Let's face it, the FCC has not been enforcing amateur rules. The League's proposal did not seek to assume any powers that the Amateur Auxiliary to the FCC doesn's already have; it sought to bring the information and evidence that is currently being developed under existing rules directly to the part of the process that ultimately does the actual enforcement, the Administrative Law Judges. In all cases, enforcement of the rules, meaning the fines and other legal punishments, ultimately should rest with the US Government, not the ARRL or anywhere else in the private sector. In terms that may be more familiar, an equivalent to the ARRL proposal would be to have in place a process where a citizen could bring information about criminal activity directly to the courts rather than have to always use the local police department as the intermediary.

> Hans was right it was a non-event but only because most of us on both sides
> had been led by people at the FCC to expect a lot more from the NPRM. When
> it comes to Government agencies all of us would do well to remember" believe
> nothing they say and question everything." You get fewer surprises that way.

I do not believe that it was the FCC that led people to expect more from the NPRM, but rather some of the speculation that was offered as firm fact by some who appeared to be in a position to know. The FCC didn't let anyone know exactly what they were proposing until the last t was crossed, and that includes the ARRL. Some folks assumed, for whatever reasons, all sorts of things about the proposal, and offered that what they knew "must" be true was indeed true. I was a bit surprised by some of what was in the ultimate proposal; I, too, expected the FCC to have

proposed specific code speeds, but I didn't ever think that anything that anyone, including myself, had to say about the proposal was anything other than wild guessing. It may be appropriate to "believe nothing and question everything," but I think that in this case, that old adage applies to others much more than it applies to the FCC. Those that offered that the FCC was going to propose two classes or put this on the fast track and would not accept negative comments simply missed the mark.

All water over the dam, of course, and we can save that all for idle chat later. What is important now is that we offer our views to the FCC, individually and organizationally, in a way that helps the FCC sort out the wide range of opinion and the sometimes conflicting issues into a change that is beneficial to the Amateur Radio Service. The FCC does NOT decide things on the basis of popularity alone, but they will use the input and beliefs and feelings of those who comment as a guage of how any change they make will affect the Amateur Radio Service. What is equally important, IMHO, is that our comments to the FCC be above reproach and be done in a fashion that reflects well on the value of the Amateur Radio Service.

Jimmy the Retard says:
>My My Little Jeswald are we not the gay >one? Good luck on your upgrade. MORON

Says the guy who took 10 years for his upgrade to General.... How much did you pay somebody to sit for your exam?

Let's see how well you remember the General test, O'Mindless...

If calculations show that you and your family may be receiving more than the maximum permissable RF radiation exposure from your 20-meter indoor dipole, which of the following steps might be appropriate?
a) Use RTTY instead of CW or SSB voice emissions
b) Move the antenna to a safe outdoor environment
c) Use an antenna-matching network to reduce your transmitted SWR
d) All of these choices are correct

Can you answer it, jizzswallower?
KC8JBO EM99

I have heard lot's of XYL's with tickets which I suppose is a good thing,
the part that bugs me is for someone to get a ticket with no interest in at
all in radio, I've tried to strike up conversations several times with guys
on 2m asking about their HF interests or other modes they enjoy. The hair
stands up on the back of my neck when I get the reply "Well Tim I'm an
admitted appliance operator, I just operate 2m repeaters" Arrrghhh.
Something tells me no matter what you showed this guy he's NEVER going to
pick up a soldering iron. I'ts great for people to join and learn as they
go, I dont particularly care for those who join and never go anywhere but
the local 2m repeater.

>for general at least.

I've noticed that point. I see the validity of that view, but
wonder if that is the correct read. It might refer to just
garndfathering them as does say the ARRL proposal (and could then
still keep 13wpm on the new generals) Unlikely well I hope it is
unthinkable, but I hate to be certain. I'll be gald when I read it
directly for myself

Kind of a harsh stance, Tim.... So long as they
are good operators, and operate legally I fail
to see the problem with this. Having tens of thousands
of "appliance operators" keeping our VHF bands
active does a lot to keep commercial interests at bay.
Everyone has their own area of interests. I find more
and more my own operating time is being limited to
chatting on two-meters while on the drive to work.

Tom,

That should give everyone something to think about. Personally I
feel that computers are a necessary aid in the ham shack anymore,
I think any ham without one is missing a great deal.

Since I spent over twenty years fixing computers, I understand
them, I know how to use them, I realize that they break, and I
understand how to fix them. Nothing about computers is magic to
me.

I have also been using a radio as a ham for over 20 years, but
I still feel a little magic that trickles thru the headset now and then.

Some of us feel the magic, and some of never do. That's never
going to change.

Personally, I'll choose both.

I've seen ARRL officials worry about what the FCC would propose. I've even seen a few say to people that the FCC would likely come up with something that the listeners would like less than the ARRL proposal. I've not seen any ARRL officials give specific predictions of what would be in the FCC proposal.

As for the purpose of my comment, it was to suggest to the credulous that they consider in the future that those who claim to have detailed "inside" knowledge of what the FCC is going to do may not, in fact, have such knowledge. General trends and directions, yes, those who stay in close contact with the FCC are likely to know those ahead of time.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 11/2330Z AUGUST 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 11 AUGUST AND FORECAST FOR 12 AUGUST - 14 AUGUST
STATUS INDICATORS SOL:** YELLOW ** MAG:** RED ** ION: ** YELLOW **

1A. SOLAR SUMMARY
Activity 11 Aug: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 11 Aug: 150/105

GOES satellite data for 10 Aug
Daily Proton Fluence >1 MeV: 1.0E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.50E+07 (normal)
X-ray background: B4.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
12 Aug 13 Aug 14 Aug
Activity Low to moderate Low to moderate Low to moderate
Fadeouts Probable Probable Probable

Forecast 10.7 cm flux/Equivalent Sunspot Number for 12 Aug: 150/105
COMMENT: Isolated M class flaring and fadeouts expected.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 11 Aug: The field was briefly at
active levels early in UT day, then declining to quiet to unsettled levels.

Estimated Indices 11 Aug : A K
Learmonth 8 4222 2111
Fredericksburg 9
Planetary 10

Observed Indices 10 Aug : A K
Fredericksburg 13
Planetary 14 3342 4333

2B. MAGNETIC FORECAST
Date Ap Conditions
12 Aug 20 Initially quiet, then becoming active (with possible
minor storm periods) during local night hours.
13 Aug 17 Active

14 Aug 10 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 25 was issued on 10 August and
is current for interval 12-13 August. Increase in activity expected
during second half of 12 August and first half of 13 August based
on recurrence and dissappearing solar filament on 08 August.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High

> I don't like it at all.
> We have far to much electronic stuff going on in our lives, lets not go there.

I knew this was going to come up :-)

I realize the sentimental value of printed QSL cards (I like them myself). And, indeed, electronic QSLs cannot be stored in a photo album to show to friends (how many of us do that anyway?)

The benefits of a data QSL would be overwhelming, however. The printed card system is simply not working well enough. What is the percentage of QSL cards you have received from contacts in a CQ WW DX contest, for example? How about those new ones you specifically asked a card for even in the heat of the contest? Not QSLing a contest QSO is even silently considered acceptable! Why is that? In a big contest a small gun is probably most likely to catch rare DX!

Can you imagine why? I can - the burden of writing (or printing labels and sticking them onto cards, which already has much less romantic appeal anyway) is simply too much, and it costs way too much. How would you like to print write a few thousand cards after a leasurely contest weekend? Personal touch, eh?

A big DX operation may get tens of thousands of contacts. The arrangements to deliver cards to all willing recipients are extensive. And slow. And expensive. With electronic QSL, the DX group could set up a server, where the Needy would get their certified QSL by themselves. For minimum cost, maximum speed. Even during the event!

Why should the recipient beg and pay for and wait for his/her confirmation for an award? Mind you, I am not proposing a mandatory system. Those of us willing to pay and wait should indeed have their way.

But, please, let us not get into this. Some of us like the idea, some of us do not, that's for sure. I call for ideas for realizing the EQSL, not motivation (not any more). If we think it was a bad idea (after trying it for a while), it will be dumped, that's for sure.

We should bare in mind the primary function of a QSL card, which is confirming the QSO. We could, of course, debate whether even this is necessary, and if log entries should be enough anyway. But as long as they are required, shouldn't the system be as transparent, easy and inexpensive for its users as possible?

By the way, showing off to fellow hams comes only second - the pictures of towers and radios and golden letters could even be

included in an electronic version, if considered absolutely necessary
;-)

> BTW, I'm 36, not an old Ham :-)

I am 32, been ham for a dozen years, and, unfortunately, I may still
be considered to be young within hams. I would very much like the
situation to be different... :-)

Hey Jim is there a no Stumpjumper international. We no have a No Stump Jumper radio network, I just was hopeing that there was a no stump jumper internation. You know there really should be such a org. I mean to thell you that such a group could really do the world of amateur radio some good.Just think How good ham radio would be with the scum of the earth stump jumpers. There would be no more QRMing of the nets on 14.313 and 14.300. 75% percent of the jaming on 75 meters would be gone. I mean to tell you. Ham radio would be a better place for all with out the stump jumpers.

I want to know what are the issues? Lets see here most of you vomit
boys oh I'm sorry B.A.R.F. boys QRM the nets and any other QSO that is
going on. Lets see here nightly you vomit boys QRM 3.901 and you vomit
boys QRM 14.313 daily. Why don't you gather up all your little vomit
boys and stay on 3.8945 leave us alone on 01! So what are the issues?
The only reason that you see one liners is that is about all you can
understand. I truly want to know what are the issues. There is no debate
Herbie stole long distance service form unsuspecting Americans. Jimmy
Obrian is a covicted drug user. What argument? You ment to tell me that
the B.A.R.F. supports this type of activity? You say that you are
supporting the betterment of ham radio and yet you support these type
of people. You also make up false warrants about people and post them on
the webb. You also post other peoples lies on the internet as well as
broadcasting the same lies over the air. Evrything that the good fellows
has ever posted or broadcasted over the air has been the truth that can
be proven. So what are the issues here?
C-YA Dummy
Oris
There should be a book out B.A.R.F. for dummies you all act like you
have read it.

>I hope Marty Chittim, W9XN, makes that idiot wish he had never been born.

There's that _christian_ethic, "love your neighbor, unless he is a christian."

>You can easily see what they (The Goodfellows) are all about. All they know
>how to do is make accusations and lie.

Not unlike the stumpjumpers,eh, who regularly do so.
Hypocrite!

> There is not one among them that could win an argument with Herbie, Marty,
>Lloyd, Drew, Jim O'Brien or any of the

I've done nothing but win an argument since I checked into the newsgroup, it's
so sad that you rumphumpers are too dense to understand that fact. You've done
nothing but backpedal, hide behind religious dogma, engage in hypocricy, and
dodge the issues.

>B.A.R.F. members. They have shown time and time again that they just resort
>to name-calling and filthy language.

Whine and cry some more, insensible dolt.

>There is not one of the so-called
>Goodfellows who could debate any of the real issues one-on-one with a
>B.A.R.F. member.

Since ButthumpersAndRimjobFemmes "members" lack the skill, why bother?

> Just look at the posts from the representatives of the Goodfellows and the
>Intercon Net. Their posts are full of hatred and venom that is directed at

>from The Good Book that cut them like a razor.

No, stupid, his "razor" had the strength of a plastic butter knife. He couldn't
answer the questions, so he went to his Bible for slow readers on his computer,
typed in the main theme of my comments, and reposted the results. Not much
thought went into his insipid "responses."

>All they could do was curse
>him and call him the same tired old names. Not one of them is capable of

>themselves the winner and change the subject. This pattern repeats itself
>over and over again.

Well, what you're describing is what I gathered that the rumphumpers engage in
on here and ON THE AIR.
The barf (such an ironic acronym, since it describes what eminates from the
collective member's "brain" (term used loosely) in an inimitable fashion.

> I refuse to engage these Goodfellows and get caught up in their school yard
>mentality. All I intend to do is make comical posts that expose them for
>what they are: Neanderthals.

So says the only living representative of Homo habilus. And yet, it comes back
time and time again, ignorant of the fact that it's arse is toasted to a degree
on the Kelvin scale.

> Anyone who doesn't like it can do the same,
>curse me, or put a cork in it and suffocate.

Aww, just consume excrement and expire.

> I really do not care.

His "mind" is too dull to know the difference, anyway.

>Those of you that know how to use kill-files should engage them now if you
have >not already done so.

>You are not going to hurt my feelings. I am past all that.
>Goodfellows, let's get ready to rumble!

You probably think pro wrestling is real, also. The "thoughts" emanating from
your swiss-cheese thalamus are neither trustworthy nor close to accurate,
Dullard. The best suggestion I can give you is wait around until you can get
a
thalamic transplant before you begin posting again. You're simply making a
mandrill of yourself over and over.

>I've thrown down the gauntlet before you.

Oh, is_that_why that piece of lingerie is on the ground?

In reading the B&W ads, I don't see prominent mention of the fact that
it uses resistors to flatten its VSWR response. At least some hams are
misled in that regard by not making explicit that antenna efficiency is
greatly compromised (there are, of course, situations where that's an
acceptable tradeoff). However, I agree that it isn't as blatantly fraudulent
as the original resistors in an epoxy block we're discussing.

>IMHO, in the context of what hams consider to be an antenna tuner,
>resistors do not a matching circuit make.

Well, the loading resistors certainly aren't matching devices in the
conventional sense. A taper pad would be a case where resistors
could form a matching circuit in the more conventional sense (and
still be lossy).

I must say that this is an extremely rare occasion. I find myself in agreement with Charles. CB, GMRS, FRS, and cellular phone are designed for the sort of usage David is outlining. Amateur radio isn't intended to be solely a family intercom. If that's the only reason David's wife has for being licensed, then I'd suggest she should insist on using a more appropriate radio service instead.

If one isn't at least somewhat interested in radio for its own sake, amateur radio is the wrong service. Amateur radio can wear many hats, but that's an essential one to defining the character of amateur radio.

Subject: ** FLEA at MIT ** Sunday August 16th Cambridge MA
Summary: Buy Sell SWAP Ham Radio Electronics Computers 9AM - 2PM

This coming Sunday...

*** !!!! In our Traditional GARAGE and lot !!!! ****
so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
Sunday August 16th 1998
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >2000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

*** Attention Sellers ***
Prepaid vendors.. Season Pass or monthly,
will be admitted FIRST.
Separate lines will form prior to gate opening
for prepaid and nonprepaid vendors

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

Thanks for reading....

Need to know if a 450 - 470 MHz split Mastr II is able to
be tuned or modified to work down in the "link" spectrum (420's)?

Any help would be greatly appreciated.

Thanks,
Russ

If I recall, some of the earlier B&W ads showed an actual resistor. The ones from 1990 showed a "balancing network." They are not currently advertising. I just ran a NEC-4 model of their 90-foot long folded dipole. To get a feed-point Z that was reasonably resistive (563-j21 on 14 MHz, 490-j7 on 3.5), I used a 1600-ohm loading resitor in the center of the upper leg of the folded dipole at 60 feet. The result was an antenna iwith -5.2 dBi gain on 80 meters, 4.95 dBi gain on 20. By comparison, with the resistor set to 0 ohms, the gain was 6.2 dBi on 80 and 9.77 dBi on 20. On 80, it is somewhat lossy, but those who know antenna theory would not expect it to be otherwise -- one does not get a flat VSWR across all HF without resitive loading. Admittedly, the manufacturer does not use his ad to educate people about broadband antennas, but he is not making specific, untrue claims.

I have used resistive matching in a number of ways over the years. Knowing of such a thing, I qualified my statement iwth "in the context of what hams consider to be antenna tuners." :-)

I agree to disagree.

But I must also confess my hope to my wife and my 1 year old girl to
be as "Ham-my" as possible.

My hope for my family's interest doesn't stop after they are all
licensed. As least they can start "sniffing" around rather than just
see me enjoying daddy's hobby. They can formally check in the YL net,
personnally experience the 6M band opening, the use of a repeater, and
get to know some other YL's.

None of that is available to encourage them unless they have the
ticket. Note that I am not promoting the "dumb down" approach; in
contrast, following the rule is what I am talking about.

Many of us have been licensed for too long and cannot relate to the
fact that there is a group of prospected Ham's that can be discovered,
with some positive reinforcement.

While the motive to get my wife licensed is arguably selfish. No one
can really tell if she will develope her own area of interests in
Hamming in the future after a hard earned license. However, this is
by far better than hearing hams get burned out and get out of the
hobby.

One should not draw an equal sign between Ham Radio against CB, FRS, GMRS, and Cellphone. Ham Radio is a unique service that neither operated by merely paying for a fee, nor getting on air by buying the equipment. It takes, at least, an exam and some level of studying. It's 100% easier to get a gun than a Ham license here in the US! I believe this is what truely setting Ham Radio apart from other no-brainers' services.

I don't see it as a crushing defeat for any agenda, Michael. I do note that those who offered that the FCC would propose the no-code agenda when this came out were wrong. I do note that those who offered that it would be put on the "fast track" were wrong (comment date Dec 1, 1998 -- an unusually long time, presumably to give the FCC time to deal with the incredible volume of comments I expect this will engender). I note that those who offered that the FCC had already decided all of the specific changes were wrong. I note that those who said that the FCC would not "accept negative comments" were wrong. I don't mind speculation, mind you, but, IMHO, most of this "speculation" should have been labeled as such, not distributed in bulletins and newsletters as fact. Doing so, IMHO, only fueled the fires of disagreement and made it more difficult for hams to discuss the issues and determine a concensus.

The paper copy was FAXED here yesterday; I have read it through. Although the FCC did propose some specific changes, they also (as some people "speculated" :-)) left many issues, such as Morse code testing, open, simply asking the amateur community for input on what code speeds are appropriate and why.

I was surprised by one or two of the things the FCC had to offer. For example, they proposed that the Novice license be eliminated, in that no new Novice licenses would be issued, but that they would continue to renew or modify it indefinately. It will be interesting to see how ARRL responds to this, because no small number of the comments I have seen expressed concern about the ARRL's proposal wrt the Novice license. I do note that the FCC's proposed solution is compatible with the ARRL premise that no one should lose any operating priveleges in any restructing. The FCC also proposes to elmininate the Tech-plus license. They, however, did NOT offer that the current licenses would be renewed indefinately, but noted that Tech plus licencees who had

passed the "old" Tech exam (the one that also included the General written) would be grandfathered to General, but the newer Tech plus licencees would have to pass the General written. What is not clear is what would happen to those who did NOT pass the General written. It would NOT be consistent with not losing priveleges to have those folks lose thier HF priveleges, so I imagine that ARRL will have something to say in this general area. IMHO, the fact that the FCC is willing to continue to renew at least one of the license classes "eliminated" in the restructuring, although a bit surprising, offers a lot more flexibility than any proposal I have seen offered to date.

Although it is a bit disappointing that the FCC did NOT have more specifics to offer, this does leave the issue open for a wide range of input from the amateur community. By not locking casting these issues in stone, the FCC has given the amateur community and those offering comments considerable flexibility. This is consistent with those amateur organizations that offered their views informally to the FCC, by letter, rather than by adding to the formal petitions for rulemaking. The result is that organizations, individual hams and the FCC have more leeway than they otherwise would. Let's hope we can all use the resultant flexibility to good effect.

The FCC now accepts comments electronically, through its web page and via email (details are in the NPRM), and I urge hams to read the NPRM and offer the FCC their comments. The FCC will use those comments to determine the final regulations. I also urge hams to make thier views known to their ARRL Division Director, either by sending a cc of comments sent to the FCC, or by direct communication with the Director. The ARRL will use those comments to shape its formal response to this FCC NPRM. To make it easy, the ARRL's web page has a form that automatically sends member email to the appropriate Division Director (this works automatically for members only because it was easier for us to tie into the ARRL membership database). Members can go to http://www.arrl.org/news/restructuring/ to send their comments. Non members can comment, too, but should go to http://www.arrl.org/divisions/ to link to their Division Directors' email and web pages.

> Oh, what a crushing blow for all of those promised free Bread and
> Circuses by Ready Freddy. LBIMCLMAO.

I don't think anyone has suffered a "crushing blow;" I think that the way this was handled by the FCC and all concerned has given us all a proposal that is truly a proposal -- a much better turn of events than some of the "doom and gloom" predictions I have seen. I expect that the FCC will do what it is setting out to do -- solict, obtain and evaluate comments from individuals and organizations. I expect that ARRL and other organizations will do what they have set out to do -- solicit member comments and use them to put together a formal reply to this wide-open FCC proposal. This will probably settle the code-testing issue for the next few years (although I would not be at all surprised

if it all was re-evaluated if there are changes at the international level), so it is important that we do it correctly now. Read the proposal (the FCC usually takes a day or two to get things on line, but their phones are probably already ringing, so I bet posting it on the Web page WILL be done on a fast track. <grin>), offer reasoned and reasonable comments to the FCC and offer your comments to those organizations to which you belong that will also be participating.

947. Rethinking ham radio

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-11 00:00:00 UTC
From: tbryantNOSPAM@cannet.com
Message-ID: <6qq048$m2s@dolphin.cannet.com>
Source record: 165010

Summer is coming to a close and school will be starting, so I thought
I'd make one last post to try to stir some thoughts.

Ham radio or computers? The choice shouldn't be that hard.

When I was into ham radio heavily, I thought that a computer would be a good
station accessory. The old TRS-80 CoCo I bought served its purpose well for
several years.
It finally came time to upgrade the system. I bought one of the first 386
clones when they were introduced around 1989 or 1990. Local BBS's began
to pop up everywhere around that time. Some good, some not so good. I soon
discovered that I was spending a good deal of time engaged in stimulating
debates with passionate opinions on both sides of issues. Something that
you just don't find very much of on the ham bands.
I even became involved with some aspects of the arts on a local basis through
people I'd met on local BBSs. This is how I met my wife, which probably
never would have happened had I not "strayed" from ham radio.
The local BBS scene changed. It was "goodbye" to them, and "hello" to the
global village known as the internet. BBSs had to switch their access from
dial-up to telnet-accessible to survive. As a result, dial-up BBSs have
pretty much become a thing of the past.
As far as ham radio goes, the only thing I now have station-wise is
an HF rig and an multi-band dipole. It's used mostly for listening to
foreign shortwave broadcast stations.
As you can see, computers changed with the times. Has ham radio done the
same? You would think that with the advent of packet radio in the early
80s it would have grown, but packet is still at a certain few frequencies,
and still, for the most part, only at 1200 baud. Repeaters are in abundance
in some areas, but only a few are used regularly. In Northeast Ohio, many
repeaters sit silent for days, and sometimes weeks at a time, save the
occassional "kerchunk" or I.D. signal to let you know it's still there.
If local sysops had the vision to remove land-line BBS's when the internet
became commonplace, why didn't hams have the vision to move from so many
repeaters to some sort of high-speed packet swtiching network that isn't
confined to a small segment of the two-meter band?
The reason is simple: Hams are stuck in the past. This goes beyond the code
testing debate. They're hanging on to things that are dead. With the
exception of the occassinal emergency need for communications, ham radio
serves no other purpose that to give boring old farts and young social
outcasts something to do with their lives. DXers and contesters serve no
one but themselves. Appliance operators like the gadgets, but still talk
about the same boring subjects on the air. Even if someone does engage in
a stimulating debate, as happens nightly on 75 meters, they're QRMed or
branded as some sort of reason why ham radio is going downhill.
On the internet, "QRMers" can be killfiled or ignored, with little more than

a minimal annoyance.

I keep my ham license renewed just in case I may have a use for it, but I'll take computers computer users over ham radio any time.

Yes. This is a legitimate reason. This is as legitimate as many many
other reasons to get a Ham ticket.

> [snip]

>I can't help but think that when people commonly get Ham tickets in the name
>of expediency instead of through a genuine interest in the hobby, then
>Amateur Radio is being treated like CB.
>

Sorry Chuck. I disagree with you on this.

Amateur Radio will be treated like CB __ONLY__ when one day the FCC
decides to waive all the test requirements to get a Ham ticket. One
should "earn" the Ham ticket, not to "Buy/get" one.

As long as there is a test, Amateur radio is nothing like CB, FRS,
GMRS, and Cellphone.

> THE SURVEY THAT LESS THAN 15 PERCENT OF THOSE ASKED RESPONDED TO ?

Nope, you must be referring to a different survey. :-) In this one, 1100 surveys were mailed out to 1100 ARRL members. 77% responded to the survey. Surveys were also mailed out to 500 non-ARRL members. 73 were returned by the Post Office, leaving 427 actually mailed. 68% responded. The member and non-member results were evaluated separately. The sample sizes used gave an overall confidence level of +- 2.9%, with a slightly higher confidence level for ARRL Members, a smaller for non-members. (Statisticians feel free to chime in!)

The Survey questions were printed in September, 1996. The unsolicited responses from that "survey" were not included in the analysis of the survey that was described in Februrary, 1997 QST. (Those were tablulated separately and the summary and the individual responses were sent to the ARRL Directors.)

> > Dismisses a few miscellaneous petitions as "repetitive" and as lacking
> > sufficient justification even to assign an RM-number.

> BYE BYE NCI, THANKS FOR WASTING OUR TAX DOLLARS

To my recollection, NCI does not have a pending petition before the FCC. They have filed reply comments wrt some of the ARRL petitions, have written an informal letter to the FCC wrt their views on restructuring and have written letters to most world adminstrations, seeking 3 classes of license with frequency and power limitations based on the level of written exam, but not on Morse code proficiency. But if you are alluding to NCI petitions being among those dismissed, you are in error.

SB QST @ ARL $ARLB057
ARLB057 FCC proposes to streamline amateur rules

ZCZC AG57
QST de W1AW
ARRL Bulletin 57 ARLB057
From ARRL Headquarters
Newington CT August 11, 1998
To all radio amateurs

SB QST ARL ARLB057
ARLB057 FCC proposes to streamline amateur rules

The FCC has proposed to phase out the Novice and Technician Plus class licenses, leaving just four amateur license classes in place--Technician, General, Advanced, and Extra. The Commission also has asked the amateur community to express its opinions on Morse code requirements for licensing and testing, but offered no specific changes. And the FCC proposed to permit Advanced class licensees to administer amateur exams up through General class. The proposals were among several suggested rules changes and invitations to comment contained in an FCC Notice of Proposed Rulemaking, WT Docket 98-143, made public August 10.

In proposing to phase out the Novice and Tech Plus tickets, the FCC said ''there appears to be an unnecessary overlap between the Novice, Technician, and Technician Plus license classes.'' The FCC also said that Technician and Tech Plus operators ''predominantly'' use FM and packet on VHF and UHF. In addition, the FCC said Novice applicants last year numbered fewer than 1000, while there were nearly 21,500 Technician applications.

Under the FCC plan, Novice and Tech Plus licensees would retain current operating privileges, but no new Novice or Tech Plus licenses would be granted. For examination purposes, current examination elements 2 and 3A would be combined into a new element 3A. For administrative purposes, the FCC would combine the current Technician and Tech Plus databases into a single Technician database. The proposal would eliminate the 5 WPM code test, Element 1A, as a required element for any class of license.

The elimination of the Novice and Tech Plus license classes would effectively raise the bar for future applicants desiring to gain HF operating privileges, unless the FCC ultimately reduces Morse code testing requirements. Since the General class license would become

the entry-level HF ticket under the FCC's proposed rules, applicants would have to pass at least the 13 WPM code test.

The FCC did not propose to change any operating frequencies or license privileges for amateurs. However, the FCC does seeks comment on the disposition of the current Novice HF bands, which carry a 200-W output power limit for all licensees. The FCC invited comment on whether it would be ''appropriate'' to delete the Novice bands and the power restrictions on higher-class licensees and permit Novices to operate CW anywhere on 80, 40, 15, and 10 meters at 200 W output.

The FCC opened the door to comments on all aspects of Morse code testing from the amateur community. In particular, the Commission said it wants to know if hams prefer the current three-level system or would like to see it reduced to a one or two-tier system--and, if so, at what required speeds. The FCC asked whether hams would be willing to trade a reduction in Morse code requirements for additional written elements on newer digital technologies ''which, in part, are replacing the Morse code.'' And, the Commission asked whether it should consider specifying Morse code examination methods, such as fill-in-the-blank or one minute of solid copy, instead of allowing VEs to determine the testing method.

In a related issue, the FCC also seeks comments on how to deal with potential abuses of the current disability waiver for higher-speed Morse code tests. In RM-9196, the ARRL had asked the FCC to require anyone applying for an exemption pursuant to a doctor's certification to first attempt the higher-speed test before examination credit could be given. The League also asked that VECs have access to relevant medical information from the certifying physician. The FCC said the ARRL's proposal would place ''an unfair burden on examinees'' and raised serious privacy and confidentiality issues.

The FCC went along with an ARRL petition and proposed allowing Advanced class hams to be eligible to prepare and administer license examinations up through General class under the VE program. The Commission said the change would permit greater testing opportunities for hams. The FCC also invited comments on whether it should change written examination requirements ''to provide VEs and VECs additional flexibility in determining the specific contents of written examinations.''

Referring to yet another ARRL petition, RM-9150, the FCC invited comments on how it can improve its Amateur Radio enforcement processes. The FCC applauded the ARRL ''for its creative thinking'' in that petition, but said the specific proposal was ''inconsistent'' with the current statutory role of administrative law judges. The FCC raised the possibility of encouraging complainants to include a draft order ''to show cause to initiate a revocation or cease and desist hearing proceeding.'' The FCC said it also wants to hear how

it can better use the services of the Amateur Auxiliary in beefing up enforcement.

The FCC proposed to phase out Radio Amateur Civil Emergency Service, or RACES, stations by not renewing their licenses. No new RACES licenses have been issued since 1980, and only 249 valid licenses remain. The FCC said RACES stations no longer are needed because any amateur station that has been properly registered with a civil defense organization has the same privileges as a RACES station.

The FCC also took the occasion to clarify the definition of ''power'' as used in the RF exposure table in Section 97.13(c)(1). The FCC said it refers to peak envelope power (PEP) input to the antenna. It also made clear that no one holding an FCC-issued ham ticket may apply for a reciprocal permit for alien amateur license.

The FCC set a longer-than-normal comment period. The deadline for comments is December 1, 1998. The deadline for reply comments is January 15, 1999. The FCC will accept electronic comments via the Internet at http://www.fcc.gov/e-file/ecfs.html.

A copy of the complete NPRM has been posted on the ARRLWeb page, http://www.arrl.org. The FCC NPRM can also be downloaded from the FCC Web site in Word Perfect 5.1 and Text versions as:

I am new to this newsgroup and I don't know if my question has been already answered.

I am planning to send some equipment, tools and AC/DC transformers, all of them rated for 110 volts and 60 Hz to a friend of mine living in a country using 220 volts and 50 Hz. About the voltage there is no problem using AC stepdown transformers.

What is going to happen because the 60 to 50 Hz difference?.

All information and sugestions will be very appreciated.

> > Short-wave, FM, AM, etc
> >
> > Every piece of information will be highly appreciatedOK, you have gotten into a very hard area. First, you could start a AM
station. To get the kind of range from NY to Carribean, you would need
a 50,000 watt transmitter. These are very expensive. I recommend you
download a free package of software to help you find the range on SW and
AM. You can find this at the FCC's website. Go to search, enter HF,
find the HF Services page, and you will find something. Go to
Continental Electronics page. Next, you could go FM, but it would be
extremely hard. To get coverage from NY to the Carribean, you would
have to buy lots and lots and lots of translators. And don't forget the
license fee, which would cost LOTS a year with all those translators.
You can try SW, which may be the most economical radio signal way of
doing it. To get on SW, you will have to buy an expensive SW

transmitter. 50 kW is fine. (YOU WILL ALWAYS NEED AN ANTENNA UNLESS YOU ARE DOING COMPUTER BROADCASTING!) However, you could to net broadcasting. This costs about 10,000-25,000$, requires computers, etc., and can span the world.

Well, I am one of those "old" techs with an old license to prove it.

I guess this means I will become a "new" general. I still only use
2 Meter FM infrequently.

Just got through reading it Ed and it is a fair proposal that defines the ground all of us on both sides of this argument will have to use to settle the code issue. I already see which way the FCC is leaning regarding this issue and I was particularly glad they put to rest two other outstanding issues that were still open. Letting the ARRL have more enforcement powers and the Code Waivers.

Hans was right it was a non-event but only because most of us on both sides had been led by people at the FCC to expect a lot more from the NPRM. When it comes to Government agencies all of us would do well to remember" believe nothing they say and question everything." You get fewer surprises that way.

Hello Hugo,

Depending upon the tolerances in design, there may be a problem if the
iron core becomes saturated. At higher frequencies, less iron can be
used for the same power rating.

Another problem to consider is the exact mains voltage. At the moment,
European countries are moving to 230 Volts, a compromise between the
UK (240 Volts) and most of the other countries that had a 220 Volts
mains voltage. If you are sending the equipment to Europe, you will
have to think about this.

Are any bulletins to some radio amateurs?

> The FCC has proposed to phase out the Novice and Technician Plus
> class licenses, leaving just four amateur license classes in
> place--Technician, General, Advanced, and Extra.

The FCC came up with idea? In reality the FCC is the ARRL puppet
and Dave Sumner pulls the strings.

Since the General class license would become
> the entry-level HF ticket under the FCC's proposed rules, applicants
> would have to pass at least the 13 WPM code test.

Horrors, they ham would have to be COMPETENT.

In particular, the Commission
> said it wants to know if hams prefer the current three-level system
> or would like to see it reduced to a one or two-tier system-

Hams prefer, Hams prefer, Hams prefer, Hams prefer, Hams prefer,
Hams prefer, Hams prefer, Hams prefer, Hams prefer, Hams prefer,

What the hell is this supposed to mean? The FCC is supposed to
serve the public, not just hams. Why doesn;t the FCC just give all
the regulation of the ham bands to the ARRL (actually defacto, they have).

-and, if
> so, at what required speeds. The FCC asked whether hams would be
> willing to trade a reduction in Morse code requirements for
> additional written elements on newer digital technologies ''which, in
> part, are replacing the Morse code.''

Hams do not trade with the ARRL, sorry, I mean the FCC.
They want it all easier UNLESS they already hold that class
of license, then they want it harder.

> Referring to yet another ARRL petition, RM-9150, the FCC invited
> comments on how it can improve its Amateur Radio enforcement
> processes.

The FCC enforces?

> The FCC proposed to phase out Radio Amateur Civil Emergency Service,
> or RACES,

RACES, totally useless.

In article <$arlb057.1998@arrl.org> w1aw@arrl.org writes:

> It also made clear that no one holding an FCC-issued ham ticket may
> apply for a reciprocal permit for alien amateur license.

That seems redundant, unless it's a watering down of:

97.17(d)(4)

No person who has been granted an amateur operator license is
eligible for a reciprocal permit for alien amateur licensee.

I had always read that as saying that if one had ever held a license
one could never apply for a reciprocal permit. This new wording
suggests that one is only ineligible if one holds a current license.

Is there any change or not? What does the current regulation mean?

> Ham radio or computers? The choice shouldn't be that hard.

Why have to make a choice between the two? Why not keep 'em both?

Packet is an exciting marriage of computers and amateur radio...

And I use my computer to program my Vertex and yaesu radios...

And i spend a lot of time reading up on amateur topics while perusing the Internet.

So...I don't think anyone HAS to make a decision between the two. Let's keep 'em both!

Hi Jim - It sounds as if your desire to stay home outweighs your desire
to work. Once you get desperate enough for a job, the rural lifestyle
will not seem so important. I never thought I'd leave my home beach town
of San Clemente (California) until I matured enough to realize that a
career is more important for survival than surfing. (And look where
I ended up - in Hawaii with a career I absolutely love!)

The FCC is being polite ans asking for comments. By their uestions you can get a feel for what they intend to do. They asked ..."should the code exams [speeds] be reduced to one or two"? One would = 5 wpm and two exams would be a 5 wpm exam and a ? wpm [ARRL says 12] exam.

are you an idiot or what???
the TREATY says every ham in the world MUST learn code to operate on
HF. The FCC can NOT change the treaty requirement. But they can set
the speed for which US hams must pass an exam in order to work HF ...
and satisfy the treaty [the treaty does NOT specify what the minimum
speed is].

well they are going to 4 classes and keeping the present names which I
like. also the present entry level license to HF [Tech Plus w a 5 wpm
code exam] is being dropped and the new entry level to HF will be the
General with its present 13 wpm exam. I doubt the FCC intends to raise
the entry HF license from 5 wpm to 13 wpm. More likely that the new
General will be 5 wpm.

Did the FCC keep records of who the "old" techs are? I had heard that
the FCC only kept track of the last renewal, and "threw away" info
indicating when the license was first issured. Or are they going to use
old callbooks, or maybe they found some old data tapes laying around?

But it does SPECIFICALLY propose upgrading all tech+ hams
to general that have passed the tech test when it was the same
as the genral. That would give tacit approval of a 5 wpm speed
for general at least.

> It is not clear if that means the feild is open meaning that
>ProCoders would have to support their desire for a Code test, or just

Simply asking for input indicates that both sides will have to offer
JUSTIFICATION for their position. If the FCC makes any comparisons
to other services it will provide an indication of their awareness of
the diminished role morse has as a mode.

> He said Morse change were being considered well at least they
>being entertianed which is a step up from what we have seen in the

See comment about tech+ going to general.

Especially since the NPRM has a proposal for tech+ hams to go directly
to general if they passed the theory test when it was the same as the
general.

Actually, they did make such a comparison in the NPRM, pointing out that the widespread deployment of GMDSS (http://www.navcen.uscg.mil/marcomms/gmdss/) replaced the manual Morse requirement in maritime operations.

If you can afford upto $1,000, you have a whole lots of choices in used market. What I recommend is, you get an used TS-830S or IC-735, and spend some money on your antenna, tuner, and other accessaries such as keyer. You can get a TS-830S in good condition for less than $450, and a IC-735 in good condition for less than $550. These two are excellent radios and still in demand in used market. I am using TS-830S and Drake C-lines (I have two sets), and I am really happy with them. I don't have IC-735, but this is a damn good radio and if you ask anyone who owns one, they will say the same thing. Don't spend too much on radios. I only buy used radios, and if you are a little careful in buying used gear, you can get a good deal and get a good radio.

You should remember that there are lots of things to buy beside the transceiver.

Good luck and hope you can make yourself and your wife happy.

CQ MAGAZINE has become almost nothing but a tabloid promoting cb style amateur radio with monthly one-sided editorials by w5yi crying about his inability at cw and his expert html html+ JavaScript Java.You might think such magazines offer different views but try to submit!! Check out popular communications? The cb world lost all its tabloids so now they have this tabloid.PLEASE STUDY THE INTELLIGENCE BEHIND THE CB COLUMNS--input-output...Did you know the editor of cq has a tech license from the 1950's???(I have never been a fan of incentive licensing of 1968 but what was the tech test like in the 50's??)Also do you think the editor of cq writes his own editorials??? PLEASE..DO NOT MEAN TO INFLAME OF ATTACK THE ABOVE but what are THEY doing chronically month after month???

a grand is a heck of a LOT of money for a transceiver. i suppose i would
ask these questions of you:

which rigs have you seen others using?

what kinds of bells and whistles do you REALLY want to use?

is that built-in automatic tuner REALLY necessary?

how often are you gonna use the rig?

have you USED any of the newer/older rigs? sat down in front of them and
twirled the knobs and dials?

do you want to maintain it (calibrate/tweek/retune) yourself?

can you deal with occasional transistor fails? do you want to?

what bands do you want to work?

what mode? CW, SSB, AM, RTTY, FM?

the older rigs suggested by VE3UVT are good choices (TS-830 and the Drake
C-line, tho the Drake R4B is a good choice for receiving). If you really
want to be budget minded, an HW-16 (75 watts CW on 80/40/15 meters) can
be had for about $60. it's an older tube-rig but gets you on the air.
you'll need a VFO for it, tho, as it was intended for xtal-only operation
for novices (VFO plug on the back for the Generals, etc).

990. IPS Daily Report - 12 August 98

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-12 00:00:00 UTC
From: rwc@ips.oz.au
Message-ID: <6qt91u$eds@flare.syd.ips.gov.au>
Source record: 164839
Cross-posted to: aus.radio.amateur.misc,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 12/2330Z AUGUST 1998 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 12 AUGUST AND FORECAST FOR 13 AUGUST - 15 AUGUST
STATUS INDICATORS SOL:GREEN MAG:** YELLOW ** ION: GREEN

1A. SOLAR SUMMARY
Activity 12 Aug: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 12 Aug: 147/101

GOES satellite data for 11 Aug
Daily Proton Fluence >1 MeV: 4.4E+05
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 1.10E+07 (normal)
X-ray background: B5.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
13 Aug 14 Aug 15 Aug
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 13 Aug: 145/99

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth 12 Aug: Quiet to unsettled

Estimated Indices 12 Aug : A K
Learmonth 6 3221 1212
Fredericksburg 10
Planetary 12

Observed Indices 11 Aug : A K
Fredericksburg 4
Planetary 9 3112 3333

2B. MAGNETIC FORECAST
Date Ap Conditions
13 Aug 16 Quiet to unsettled with the chance of active
periods.
14 Aug 10 Quiet to unsettled
15 Aug 8 Quiet to unsettled

COMMENT: IPS Geomagnetic Warning 25 was issued on 10 August and
is current for interval 12-13 August. Increase in activity expected
late on August 12 to early on August 13 based on recurrence and
disappearing solar filament on 08 August.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
12 Aug Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
13 Aug Normal Fair Poor
14 Aug Normal Normal Fair
15 Aug Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
12 Aug 74

Observed Australian Regional MUFs:
Regional MUFs mostly near predicted monthly values at all sites.
Some spread F observed during local night at Townsville,
Hobart and Christchurch.

Predicted Monthly T index for August: 83

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
13 Aug 70 near predicted monthly values
14 Aug 75 near predicted monthly values
15 Aug 80 near predicted monthly values

I wouldn't talk about necrophilia, since ol' canker sore Donna committed
"suicide"
as you told everybody on 3865 a while back. Don't bother to deny it, I was
monitoring that night and heard your little "performance." So, technically, you
are a necrophiliac, since you keep the "corpse of Donna" around the hovel.

Let's put my brief reply to this book on top. Make it easier for folk's to read I hope..

You had me going there for a while, but now that I know who you are I now know where you are coming from.

You go by the name of Franky Todd, and are given the stumpjumper number of 18. You are a world class jammer on both 20 and 75. You have no amateur radio call, thus your input to this "fight" is invalid.

Interesting attempt at a replay of Marty Chittum's methodology. Sorry, didn't work.

Dan/W4NTI

>

>>Actually what you should have said was..."It was started in amateur radio aproximatly in 1952". The reality of it is this, SSB/DSB suppressed carrier was experimented with many year's earlier. It only became popular in amateur radio when Mr. Collins provided a KWM-1 transciever to General LeMay to fly around the world in the Strategic Air Command. This test was highly succesfull and led to the slow influx of SSBSC into the amateur radio mainstream.

I also disagree that it is a "old antiquated mode". It is indeed old, but not antiquated. It is the most efficient voice amplitude modulated mode available, and I feel will continue to be for many year's. It suit's amateur radio just fine, and will probably do so for many years to come.
>>

>

>>I don't see what this has to do with amateur radio, just because the maritime services have chosen to place all their egg's in one very fragile basket does not mean ham's will, or should do the same.

Also you have failed to mention, either out of ignorance, or intentionally that not all nation's have gone to this wonderfull satellite based system. If this is the case, as you seem to indicate, then how come you can tune the various segment's allocated to ship to shore and find an immense ammount of original digital?? CW and SSB will be around a lot longer than any of us will live to see.

Dan/W4NTI

Must say I agree with this post from you. The ARRL has basically
turned into a publishing house in recent year's. I have been a member
since about 1962 or so and a lifer since the mid 70's. Im not real
happy with them, however at the moment they are all we have.

May I suggest that those member's that do not like the course that
the ARRL has charted, then vote the bum's out. If your not a member,
join, so your vote can be counted. Then get out if you want to.

As for this "NEW" restructuring plan. Look's a lot like it was way
back before the fiasco known as "incentive licensing". A wonderfull
ARRL proposal that nearly destroyed amateur radio.

998. No Support for Felons

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-12 00:00:00 UTC
From: Don Scott <scott@ecs.umass.edu>
Message-ID: <35D19CC5.6B47@ecs.umass.edu>
Source record: 164891

The Intercontinental Amateur Traffic Net (14.300/14.313 7AM-12PM) has been besieged lately by one Robert Youngblood, KT4TR, who repeatedly tries to make announcements about a defense fund for KV4FZ who is a felon and who is in the process of having his license renewal denied. The Intercon Net does not in any way support fund drives for convicted felons (particularly this one, who has attacked us unmercifully) and will not recognize or assist in such attempts.
The Net generally welcomes all amateurs of good-will, whether they want to pass traffic, contact a buddy, make announcements, or just say hello. We have been told that the FCC in Georgia is monitoring our Net frequencies and will be aware of any future unprovoked attempts at disruption.

999. Re: Rethinking ham radio

Computers are now our replacement for the telephone.

Ham radio never was, and never will be, and never was intended as such.

Independent variables.

You can't test for ionospheric conditions with a computer, at least
not first-hand.

Those of us who got into ham radio as a replacement for the telephone?

If they go bye-bye, should we not have expected this? They were
"fringe" hams from the start (not to be harsh, but they got into
it NOT for radio, but for what radio could do for THEM).

WE SHOULD expect this and not be shocked! I feel sorry for them, but
it's their choice. Those who are experimenters, tinkerers, curious
folks? They're still here, and will be here.

They is you and me. Welcome home.

Sung to the theme song of the "Beverly
Hillbillies"

Let me tell ya a lil' story 'bout a man
named "Pork",

A real fat and ugly guy, some even call
him dork,

He got in trouble with the law, and had to
leave his home,

He was nothin' but a fugitive, he always had
to roam.

Hillbilly, that is. Hog jowls. Smelly too.

Well the first thing ya know it, Pork is
headin' for the hills,

To Southern Carolina where he's hidin' from
his bills,

Your all invited back next week to
this locality,

To listen to his bullshit over fourteeen-
three-one-three.

That is the way I read it also. It seems that the Novice and Technician+
classes will be allowed to die of attrition. In many ways this is sad.

Police are charged with an investigative role to ascertain the facts
in a case (as well as an apprehension role). If they feel they have a case,
they present their evidence to the prosecutor's office. The prosecutor
then evaluates the evidence to determine if there is cause to pursue
the matter before a court (in some cases the prosecutor must convince
a grand jury to issue a true bill). The duty of the court is to then try the case.

The ARRL was proposing to sidestep both the police role and the prosecutor's
evaluatory role and go directly to court. That runs roughshod over the checks
designed into the justice system by eliminating two levels where evaluations
of the merits of the complaint are normally made by disinterested parties
before the person against whom the complaint is being lodged must engage
counsel and incur the expense and mental distress of a court proceeding.

I think that was overstepping, and apparently so does the FCC. The Amateur
Auxiliary currently can perform a portion of the police role of gathering
evidence. I think that's within the bounds of reasonable volunteer conduct.
But to subsume the prosecutor's role as well seems to be going too far.
The danger of malicious harassment, or simply faulty evidence gathering,
is not adequately reviewed by a disinterested party before the issue would
reach a court.

I'm more mariner than Ham, but I think this is misleading.
For many more years, GMDSS will be used to negotiate a
frequency (whether VHF, or SSB) on which further
communications will take place. EXISTING RADIOS (meaning
SSB in this thread) will be used for this further comm.

TRUE, GMDSS will, ideally, allow a single push button distress
signal to be made which incorporates ship/position/nature of
distress/etc. Follow-up comms will still occur. There is much
more to ship-ship and ship-shore comms than yells for help.

GMDSS will help sort out the routine from the abnormal, and
help users negotiate usage of the airwaves more efficiently.
It will be (my guess) 20 years until all marine traffic is
digital. Even now, only the Coast Guard on the East Coast
uses GMDSS and then as "experimental". DO NOT YELL FOR HELP
OFF BOSTON USING GMDSS. Use VHF or SSB if You Really Need
a Reply.

1006. Low-cost 144MHz FSK transceiver design help

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-12 00:00:00 UTC
From: Artur Leung <aleung@engr.ukans.edu>
Message-ID: <35D1BF28.61D8DBF8@engr.ukans.edu>
Source record: 164899

Hi,

I would like to build a low-cost FSK transceiver which can pump out several watts of power and tx/rx at moderate speed (like 9600bps). Since I am very new to designing RF transceiver, it would be great if someone could help me on this issue. Preferrably I would like to use ICs instead of discrete components for transmit and receive. At this point I could only locate Motorola's MC2833 for the transmit function and MC3363 for the receive function. Please advise.

Disruptions to the net should end ... and raising money on the air I
believe is a violation of a ham license and grounds for termination of
the ham's license in question.

Good luck in stopping that illegal activity. The InterCon is a nice
net.

SSB is an old antiquated mode. It still works just fine. Nobody is calling for the end of it, and it will be in use for many years yet.

CW is an even older antiquated mode. It still works just fine. Nobody is calling for the end of it, and it will be in use for many years yet.

The *difference* is that you don't have to demonstrate proficiency in voice to use CW or digital or any other mode on HF. You do currently have to demonstrate a level of proficiency in CW before you can use *any* mode on HF. And this makes no sense.

If CW needs a special exam guaranteeing all HF-operating hams know it, common sense says it must be a uniquely important mode. And it just isn't any more.

Many people will still use CW for many years yet, but there is no longer any good reason to require all operators to know it.

The new FCC proposal is ok....But! What good would it do? Seems to me it would turn into a confusing mess. They will issue no more Novice & Tech licenses but those who have them will keep them. So far I didn't see anything about lowering the code to 5 wpm....So the starting code license would be 13 wpm. They are asking for comments regarding code vs digital.

The bottom line is.... I don't see the benefit for anyone in changing the license system. "Leave it alone!"

My Opinion,

They are doing it to cut costs. Has nothing to do with standards etc.
MONEY is the issue with the FCC. Reduce number of licenses, combine data
bases, reduce paper work is what this is all about. They don't care how
the amateurs do their thing as long as they can cut costs. Bottom LINE.

The Ottawa Amateur Radio Club, Inc.
is pleased to announce its annual

Hamfest.

Saturday, September 5, 1998 (Labour Day weekend)
Tailgaters Open and Building Vendor setup: 9 am
Building Opens: 10 am until 1 pm

Carp Agricultural Fair Grounds
3970 Carp Rd (at Falldown Lane)
Carp, Ontario Canada
Highway 417 to Carp Road exit, North to the fairground

Cost:
$10/table (plus admission)
$5/tailgate (plus admission)
$3 general admission (includes door prize raffle, you must
be present to win.)

Talk-in on VE2CRA , 146.940 - Mhz
See the site on APRS

The OARC Hamfest is held at the Carp Agricultural Fair Grounds at the same
time as the Carp Farmer's Market. So in addition to their amateur radio
needs, guests can also enjoy stocking up on farm fresh produce or crafts
from local artisans.

Dan, we participate in a self-taught technical hobby/service; not a day should go by w/o us gaining new knowledge wrt to electronics. The only publications I have always been able to turn to when questions arise which need immediate answers are the League's pubs.

For some 80 years the ARRL has produced a handbook written so that even a novice can learn and understand from it. The government thought so highly of the Handbook that it was used to train military communicators during WWII. For the longest period, the Handbook was the greatest selling technical book ever published, in and out of ham radio.

During the 50s when SSB was finding its way into ham radio, there was no pub one could turn to to learn about this new mode except the League's SSB manual. Also during that decade the FCC relaxed the regs regarding mobile operation - no one else published a mobile manual except the League.

To whom could you turn to for the great ideas and techniques that appear in the Hints and Kinks booklets? Propagation and antennas: The Antenna manual. Who else in the 60s produced a VHF Manual? And when that VHF VHF crowd began exploring FM: FM and Repeater Manual. The very first book in the 80s devoted to amateur digital comms: Get Connected.

Publishing affordable technical books was one of the original goals in the League's charter; for 80 years they've made information available to the layman that was nearly impossible to find elsewhere. How in the world could you possibly find fault with this concept? (If you weren't a NG ally I might have to question your desire to read in order to gain new knowledge!)

Every ham shack I've ever visited in the last 30 years has had many League pubs on its bookshelves. We are (or at least were) a group with a voracious appetite for reading and learning. Luckily, the League has been able to feed us what we most desired.

Ham radio and reading are inseparable.

Of course, more than on PLL could be used in a rotating pool. The next
one pre-loaded and locked up for the next frequency to be jumped to.

In case this applies to anyone here (apologies if not):

I wonder if anyone else has gotten excited about college radio *before* they get to college. That would mean you'd have to listen to College Music in high school :p. But if you keyword search at www.petersons.com for "radio" you can get a list of colleges with student radio stations - or at least those who take it seriously enough to mention it in the literature they distribute. I found it rather cool.

Harry,

Are you looking for new, used, solid state, BA? $1,000 can
buy a lot of radio in the used market. Look at Ten-Tec rigs
for some great used values. You can get an Omni-C for $500 +/-
and Ten-Tec can still service it, should it need it. Should
be all the radio you need for a while.

Have you calculated antenna(s), mike and/or key, watt/SWR meter,
and/or tuner, etc., etc. into that thou dough? Or are you going
to sneak that in later under the xyl's nose? ;)

73 es congrats on the ticket,

Guess there is nothing sacred to a convicted drug dealer like you, eh
Jimmy ??. What brought this on? You run out of ammo about me being
a drunk, a pill popper, etc? Tell you what, I wouldnt screw your
allegedly dead bowling pin with your appendige. Take another snort
and dont lean on those wall's, you will probably fall through. And
BTW, if you beg and cry to the Navy, they may consider upgrading that
dishonorable you got for doing those drug deals. Life's a bitch aint
it loser. Keep those stone's a comin scumbag. Say hey to Bubba when
you see him....soon.

There are 3 logical choices:

(1) Ten-Tec Scout: With the hand held mike and 3 extra band modules, it costs around $700 (new). On the plus side it performs very well AND is VERY easy to operate. I have the Scout and love it. Right now, I have to 10 meter, 15 meter, 20 meter and 40 meter modules for the Scout. If I ever decide to move to a "bigger" rig, the Scout will be moved to my car. On the minus side, the Scout doesn't have AM, FM, and can't receive all of the Shortwave frequencies. For me, this is no big deal. Also, if you purchase all the Band modules, the cost is about the same as some other rigs.

(2) ALINCO DX-70T, HF 100W/6M 10W $749.95 (HRO Price); DX-70TH, DX-70T W/100W 6M & EBC-9 $849.95 (HRO Price): A friend of mine has this unit and he loves it. The big plus is that you get the 6 meter band with this rig. There's also the ALINCO DX-77T, 100W HF $799.95 (HRO) Price, but I don't know what that unit is like. I heard that Tech-America is selling the Alinco DX-70T at a close-out price, but I don't recall the exact price.

(3) USED EQUIPMENT: This is one area where you need to do your homework. Are repair parts available for this unit? What to other Hams think of the unit? Having a fellow Ham who knows equipment might be a big help to guide you. If you could go over to the seller's house and have them show you the rig in action, you should be able to see if it's in good working order. Most Hams are honest and fair about their equipment, BUT there are some rotten Apples out there who will take advantage of others.

Remember to count all the costs; Does the unit come with a mike? What will the power supply to drive the unit cost? What other "extras" are needed to get it up and running?

I was able to put together everything for under $1,000. While I'm limited to 4 bands and I don't have a big tower or yagi; I still have fun working DX on the bands I'm set-up for. Just think how much better it will get as the sun spot cycle makes DXing even better. :-)

Can an ADMS interface cable be used to program Yaesu FTH-7008 radios, assuming
that the user has the appropriate programming software, and a homemade adaptor to
convert from the 3.5mm stereo plug to a 2.5mm mono plug?
If so, what's the schematic for the homemade adaptor cable to be used with
the ADMS cable?

>
>The *difference* is that you don't have to demonstrate proficiency in
>voice to use CW or digital or any other mode on HF.

Only a small percentage of the population cannot talk; no need to test
for something that 99+% of the population is able to do. But if it
will make you feel better, consider that a phone tests exists but
we're waiving it for you.

>You do currently
>have to demonstrate a level of proficiency in CW before you can use
>*any* mode on HF. And this makes no sense.

It does. No matter what freq'y you choose for a phone QSO, you're
operating on a freq'y in which CW is also authorized (CW is permitted
on *any* freq'y on *all* bands in the US). Whatever freq'y you choose for
a QSO, you should be familiar with all the modes which are authorized to
operate on your chosen freq'y.

>If CW needs a special exam guaranteeing all HF-operating hams know it,
>common sense says it must be a uniquely important mode. And it just
>isn't any more.

My receiver says differently. Polls tell us that CW is the second-most
used mode on HF, but scanning 40m in the evening leads me to believe
it's tied for first place with SSB.

>Many people will still use CW for many years yet, but there is no longer
>any good reason to require all operators to know it.

You need to step back so as to get a global view of why the
code requirement exists for HF privileges. RF at HF respects no
boundaries, and as communicators first and foremost, hams the
world over should have at least one mode in common. Right now,
there is only one mode *all* the world's HF-licensed amateurs hold
in common: CW. Whether one chooses to use it or not does not matter;
if the need arises he has it available to him (maybe at a slower
speed than when he was first licensed!). The ITU has this global
view while many individuals have only an insular nearsightedness -
their own personal goals out-weigh those of the global amateur
community.

As I count my posts, compared to your posts, it would seem that I'm more like the wise old owl, and you are more like the droppings at the bottom of the oak tree to which you refer.

Loser. Teacher-in-decline. Bitter old "has-been". Your best days were when you were an alcoholic. Your first wife loved you but you loved the bottle. She left. You recovered. You lost her anyway.

Now, your current wife knows your potential but you spend most of your "life" on the internet telling people how you are so much better than them. She's on her way out, as soon as her sex-change is complete.

And all you will have is the internet.

What a pathetic, sad excuse for a human.

Still do, Jeffrey. The ARRL book, RF Exposure and You, has received some high marks with the FCC and those in the industry. Much of the info in that book has contributed to the state of the art, from an organizational sense, if nothing else.

The League, of course, does a lot more than just publish stuff. They also maintain various industry and organizational contacts (I serve on the IEEE SCC-28 committee on RF exposure, the Society of Automotive Engineers EMC committee, IEEE/ANSI C.63 EMC committee, have worked on an number of engineering studies to protect Amateur Radio spectrum, and serve as an informal liaison to a number of other industry and government groups, just as an example). These functions also are carried out on the interanational level. There are educational programs to bring Amateur Radio into the classrooms, media-public relations, congressional contact and lobbying, departments to answer technical, regulatory and operating questions, etc. These functions are NOT performed by McGraw Hill!

Following up to my remarks above, on January 29, 1915, the Connecticut Secretary of State recorded the incorporation of the League; in Article 2 we read "The purpose for which said corporation is formed are the following, to wit: The promotional of amateur radio..., the organization of ... stations, the promotion and regulation of amateur radio inter-comunication, and the relaying of messages from station to station, and the printing and publishing of documents, books and pamphlets necessary or incidental to any of the above purposes."

>Amateur radio and reading are inseperable.

Right on, Jeff!

Unless I'm reading it wrong the below snip says a tech plus can upgrade to General by passing element 3B and a 13 WPM morse test. What happened to 5 WPM?

"Other Technician Plus Class operators could qualify for a
General Class operator license by passing
written examination Element
3(B) which consists of thirty questions on
the additional privileges of a General Class operator license and the
13 or 20 wpm telegraphy examination. We seek comments on this
proposal."

I spent 9 years in europe and asia with the same problem. Motors will run at 1/10th of the
speed they run in the US. If it is a high current motor you may have a problem
with core saturation. Be sure the primary voltage is 220 volts and not 240.

Also, be cautious about the source of the voltage. Some of the smaller countries
don't have very good power regulation. As well as brown-out conditions there
are plenty of surge conditions. Sometimes surges can last for quite a few minutes or more. Sometimes you'll see voltage fluctuations like crazy.

Good luck.

Hello everybody. I would like to announce a new web page for a club in Cincinnati, Ohio. It is the OH-KY-IN Amateur Radio Society's new web page. The web page contains a lot of information about the OH-KY-IN Amateur Radio Society. The URL for the page is:

http://www.qsl.net/k8sch/

There is a guestbook and counter on the page. I invite everybody to make comments or suggestions about the page. Thanks!

73 & TTYL, Dale Ham Callsign: KC8HQS, Location: Cincinnati, Oh
My web page directory is http://surf.to/kc8hqs
My ICQ number is 14976192. You can contact me @ kc8hqs@angelfire.com also.

[snip]

(1) Ignore response number 1 to your repost, regarding Sally Struthers. Buttholes abound on usenet.

(2) I like the idea expressed by someone of contacting engineering headhunters. You might indeed be able to get a job in a small city and live in the sticks nearby.

(3) But meanwhile don't give up your dream of, in effect, telecommuting while you live in a place that you actually like, rather than our traffic-choked cities. Keep looking! However, yoy may have to accept that you will only be able to realize this dream later in life, when you're experienced in your profession and have something special to offer.

(4) --AND NOW THIS COMMERCIAL BREAK-- I'm a freelance editor. I help folks who can't write good write well :-). When you do get a job, if you ever find yourself forced to write and fearing embarrasment, call on me. For a modest fee I'll fix up your writing so it makes you look great! As a long-time, experimentally-minded ham (WD5DNQ), I'm very familiar with electronic terms and concepts.

Good Luck,

Leonard W. Martin

You want to talk about a "felony stalking" charge, get serious....remember
how you and bowling pin played "lets harrass Dan" at Birmingham. Hell
you are such a piece of crap and that loser "movie star" your hitched
with make a perfect pair. You folk's should have seen these fools a
couple years back. His and her walky talkies following me around like
they were going to do something. This ass stands back TEN FEET and
hurl's insult's at me. Only reason I didn't jam the end of my cane
into his adam's apple was because the lady I was with stopped me. And
then she tells security about these two boob's. They had a great laugh
watching them make a total ass of themselves. There you are ladies and
gentlemen...the REAL Chicken Dumb Butt and his pet bowling pin.

WHAT A BUNCH OF LOSERS !!

Dan/W4NTI

P.S. Don't forget to say "hey" to Bubba when you visit him soon.

Is this boy incredible or what? Yes indeed he was a member of the US Navy during the VN war. But not in the shit. Eh Marty?? How cum by the way?? Oh and another thing...I dont like this shit, and you damn well know it. I am the one that has, on numerous occassions, tried for a peacefull resolution to this stupid conflict. And as I recall, you were doing the same...that is until I caught you, beyond a shadow of a doubt using "TheLibNet", attacking me, and at the same time being "friendly" via e-mail. Give it a rest Marty, you can fool some of the people, some of the time, and all of the people, all of the time. But like I told you Ensign Blivit (10 lbs of crap in a 5 lb bag), I didn't fall off a turnip truck lately.

Tell you what asshole, think I'll put your bullshit e-mail on here, to show the entire dang world what a flippin loser you really are.

Depends on what equipment you are talking about. If it has an AC motor, the motor will run slower. The expected output voltage from a DC power supply may be different. If the device has an AC fan for cooling, it may not run fast enough on 50 Hz to properly cool the device.

See, this LOSER is too busy smoking crack and hanging out on the street with the rest of the street people to improve himself. As for the rest of the rumphumpers, Joe the wannabe singer gargles on broken glass before treating us to a "song," which sounds familiarly like the caterwauling of an alley cat. Then there is Romulus, er, "Marion" another feminine knickname, sounds like somebody who calls gay phone sex lines. Jim, WD4JYZ, chronic alcoholic, sounds like he drank a case of beer tonight.

You might be able to get an engineering job near a smaller city, and
live out in the "sticks" (as we city slickers call rural areas :-)).
Lots of companies who do engineering work set up in smaller city areas.
RCA used to have a TV factory in Bloomington IN, which is a small town.
Find "headhunters" (employment agents) who specialize in electrical
engineers (many are paid by the companies that hire the engineers,
enough that you can ignore any that want to charge you any fees) in
the Electrical Engineering Times or other engineering trade rags.
Tell them "small town locations" wanted.

Good luck, you'll find something that pays decent. I've been working
20 years and get 90K in Silicon Valley, don't know what entry level
pays today, but it should be a lot better than those cow milking positions
you mentioned.

[deletions]

>I have used resistive matching in a number of ways over the years.
>Knowing of such a thing, I qualified my statement iwth "in the context
>of what hams consider to be antenna tuners." :-)

Dean Straw once demonstrated to me a special case in which placing a resistor of the appropriate value across the feedpoint of an antenna *increased the efficiency of a system by decreasing the loss in the system.* As I recall, the system was a coax-fed dipole used at half or less of its resonant frequency--a system in which the added loss (in the feedline) caused by the impedance mismatch between feedline and antenna was substantial--on the magnitude of tens of decibels. Adding resistance--I believe we modeled the effect with a value between 100 and 300 ohms, inclusive--brought the mismatch-related feedline loss down profoundly, far more than offsetting the added loss attributable to dissipation in the feedpoint resistor.

Resistive loading is entirely appropriate technology if it achieves the desired purpose, such as making a rhombic or Beverage directional, or allowing rapid frequency changes without requiring the readjustment of frequency-sensitive matching networks. (Remember, the goal of a communication system is simple: The available local transmitter power must be able to achieve the desired SNR in the distant receiver, and the available distant transmitter power must be able to achieve the desired SNR in the local receiver. If adding a few resistors at the feedpoint of the local antenna allows the achievement of that goal at all frequencies of interest without resort to frequency-selective matching, the use such a technique is easy to defend and worth promulgating.) It's unfortunate that many radio amateurs continue to fail to realize that ARRL's expose of a "high-speed automatic antenna matcher" based on resistive loading sought to debunk not the technique but its misrepresentation.

Hey ARRL, why don't you take a few hundred dollars of that 800,000
you were left in that estate and ADVERTISE to get new hams- and I
MEAN ADVERTISE IN PUBLIC, NOT AT A HAMFEST !!!

Where is the 5 wpm code test they claimed was looming ?
The answer is there never was going to be one. The lying staff at the
ARRL saw fit to create a false situation to advance THEIR plan for
restructuring, a plan that they think will drive hordes of newly
invigorated hams to buy QST !
They screwed us with incentive licensing and now that the dole is
falling, they want to go backwards to pad the non profit coffers.

More HF hams plus more radio sales plus more giddy members equals
dough. The equation is as simple as the employees of the ARRL.

Wake up losers- handicapped, young, old, blind, all have passed their
exams- what's YOUR excuse ?

Hey ARRL, why don't you take a few hundred dollars of that 800,000
you were left in that estate and ADVERTISE to get new hams- and I
MEAN ADVERTISE IN PUBLIC, NOT AT A HAMFEST !!!

Why isn't anyone calling for the end of SSB ? It was started in 1952.
It is an OLD ANTIQUATED MODE. It was superceded by TOR and NAVTEX in
commercial circles at the same time as CW, a few years ago.

Guess what, all you whining babies who say CW should be dumped
because it was abandoned by the maritime services ?

Throw your microphones away next because in February 1999 the voice
distress watch is going the way of CW as part of that same GMDSS.

Oops, but you liars leave that part out don't you ?

Hiram GA 30141
Said dwelling appears to be an old one story farm house with very
faded red paint. The dwelling appears to have been the victim of a
highway widening project several years ago, as it now sits approximately
six feet from a very busy two-lane highway. Residents of this dwelling
apparently enjoy the sounds of heavy traffic, day and night. Two very
long and deep skid marks were observed in front of the dwelling, as if
someone left or arrived in a hurry. There is no garage, only a rusty
carport shelter. Antennas of every description are on and around the
house, verticals, long-wires, etc. At least two antennas appear to
have been pulled up in trees by means of rope, where they swing in the
wind. A DBS dish was in the back yard. The grounds were very poorly
maintained and need of landscaping. Two vehicles were in the rusty
carport, one red Ford T-bird and one black T-bird. The black T-bird has
a busted out passenger window. Both vehicles appeared to be in poor
condition

The recon vehicle just returned, and the mission was successful.
James O'Brian AKA pig vomit
3910 Hiram-Sudie Road
Hiram GA 30141
Said dwelling appears to be an old one story farm house with very
faded red paint. The dwelling appears to have been the victim of a
highway widening project several years ago, as it now sits approximately
six feet from a very busy two-lane highway. Residents of this dwelling
apparently enjoy the sounds of heavy traffic, day and night. Two very
long and deep skid marks were observed in front of the dwelling, as if
someone left or arrived in a hurry. There is no garage, only a rusty
carport shelter. Antennas of every description are on and around the
house, verticals, long-wires, etc. At least two antennas appear to

have been pulled up in trees by means of rope, where they swing in the wind. A DBS dish was in the back yard. The grounds were very poorly maintained and need of landscaping. Two vehicles were in the rusty carport, one red Ford T-bird and one black T-bird. The black T-bird has a busted out passenger window. Both vehicles appeared to be in poor condition

The recon vehicle just returned, and the mission was successful.
James O'Brian AKA pig vomit
3910 Hiram-Sudie Road
Hiram GA 30141
Said dwelling appears to be an old one story farm house with very faded red paint. The dwelling appears to have been the victim of a highway widening project several years ago, as it now sits approximately six feet from a very busy two-lane highway. Residents of this dwelling apparently enjoy the sounds of heavy traffic, day and night. Two very long and deep skid marks were observed in front of the dwelling, as if someone left or arrived in a hurry. There is no garage, only a rusty carport shelter. Antennas of every description are on and around the house, verticals, long-wires, etc. At least two antennas appear to have been pulled up in trees by means of rope, where they swing in the wind. A DBS dish was in the back yard. The grounds were very poorly maintained and need of landscaping. Two vehicles were in the rusty carport, one red Ford T-bird and one black T-bird. The black T-bird has a busted out passenger window. Both vehicles appeared to be in poor condition

What the hell are you talking about? This "battle" has been underway for years, the NPRM "defines" absolutely nothing except the issues the FCC is willing to consider on this pass. All it does is provide a December deadline for submitting comments on what the FCC has decided are the germain issues (many of which have never been touched upon in r.r.a.p. - to wit, radiation calculations and records compliance) and then they'll go do what they perceive is the best policy and thee and me are gonna have to live with that set of decisions. Where are you getting this "us" crap? Do you work for the FCC or what?

> Yes we had hoped for better.

Pore babies . . . NCI din score so big, huh? What a huge surprise. Read the NPRM fine print about repetitve whiners.

> >The NPRM doesn't specifically make mention of, as part of the

Beat your brains out, fight like hell. And after "the battle" we'll get what we get and we'll all have to live with it. Strikes me that the FCC is

in no particular big hurry to radicalize anything despite the rantings of the Chosen Few who have demonstrated Irrefutable Perfect Logic. As if . . Maybe the FCC won't change the code test speeds at all . . maybe they'll just rework the existing obviously problematic (silly) low-end plethora of too many license classes and in one swoop wipe out the Novice, Tech+ and no-code Tech licenses and combine 'em all into one 5wpm class with somewhat expanded priveleges on both the HF and VHF bands. Or maybe they won't. Maybe they'll just say, "Hey, we did our mandatory biennial review and cleared out all the current list of nagging petitioners and WE have ascertained that everthing is cool with ham radio as-is" and change nothing. Why would they NOT do that??

> He said Morse change were being considered well at least they
> being entertianed which is a step up from what we have seen in the
> past

Wrong. There hasn't been a major FCC review of the ham radio rules since the Communications Act of 1934 was enacted which hasn't addressed the code test speed requirements and there have been a flock of such reviews over the years. You wanna get into "the past" with respect to code tests? Go back to 1963 and do a rerun of the birth of incentive licensing, this is current nonsense is NOTHING compared with that brawl. After which brawl the FCC jacked up the speeds and knocked out priveleges right and left. The FCC mentioning a review of code speed proficiency tests as one of the many issues under review in this particular rule-making action hardly opens the floodgates for no-code or 5wpm ops on HF, nor does it provide any hints whatsoever about what priveleges might eventually become available to codeless or 5wpm licensees on HF bands, or for that matter any insight at all into the entire topic.

> >Oh, what a crushing blow for all of those promised free Bread and

1063. Edited FCC proposal with respect to novice and tech+ licensees

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-12 00:00:00 UTC
From: wa2ise@netcom.com
Message-ID: <wa2iseExKC2C.4qA@netcom.com>
Source record: 164976
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Unless I've missed it somewhere, Novices and Tech +'s aren't
going to be upgraded to General without taking upgrade tests,
just that no new novice or tech +'s licenses are to be issured
to new people. One confusing point is that code tests at a
minimum of 5wpm are to be done, but no mention of other speeds.

Below is an edited copy of the FCC nbfm (to save on bandwidth)
(find the orginal at
http://www.fcc.gov/Bureaus/Wireless/Notices/1998/fcc98183.txt

****

Federal Communications Commission

edited from (and crudely reformatted for 80
character computer screens): WT Docket No. 98-143

(snip)

2. With this Notice of Proposed Rule Making (Notice),
we commence a proceeding to examine our
rules for the Amateur Radio Service in an
effort to eliminate unnecessary and duplicative
rules, as well as to
streamline our licensing processes. We also examine
streamlining initiatives for the Amateur Radio Service
in addition to those already described in our
proposals concerning the Universal Licensing System (ULS).

(snip)

12. We have reviewed the various license classes
and there appears to be an unnecessary overlap
between the Novice, Technician and Technician
Plus license classes. The Novice Class was established in
1951, at a time when telegraphy was still a
common mode of radio communication in commercial, military,
and marine services and applications. Currently,
there are very few individuals who take the examination
for the Novice Class operator license. For example,
in 1997, we received only 961 applications for the Novice
Class. By comparison, we received 21,416 applications
for the no-code Technician Class operator license.
We believe that the no-code Technician Class operator
license has replaced the Novice Class operator license
as the entry-level license class of choice. Therefore,

we tentatively conclude that the Novice Class operator license no longer serves a significant, useful purpose and should be phased out, with the current holders of Novice Class operator licenses being grandfathered. No new Novice Class licenses would be granted, but anyone currently holding licenses would be permitted to modify or renew their licenses. In addition, Novice Class operators would be eligible for examination credit for the telegraphy requirement for any license class. We seek comment on this proposal. We also seek comment on disposition of the designated Novice bands. Currently, other class licensees can operate within the Novice bands, but only at reduced power. Given the small number of new Novice licenses now being issued, if we were to discontinue licensing new Novices, would it be appropriate to delete the frequency limitations on Novices and the power limitations on other classes of operators using the Novice frequencies, so that Novices would continue to be limited to 200 watts output power but could operate using the Morse code anywhere within the 80, 40, 15 and 10 meter bands?

13. The only difference between the Technician and Technician Plus Classes is that a Technician Plus operator has passed a five words per minute (wpm) telegraphy examination while a Technician Class operator has not. Both Technician and Technician Plus Class licensees predominantly use FM voice and digital packet technologies on the amateur VHF and UHF bands. Yet, the VEs are burdened with preparing and administering telegraphy examinations, and the Commission is burdened with processing the resulting applications and revising the data base. We therefore propose that the Technician Plus Class be phased out. Holders of an FCC-issued Technician Class operator license granted before March 21, 1987, have previously passed the written examination required to qualify for a General Class operator license. Other Technician Plus Class operators could qualify for a General Class operator license by passing written examination Element 3(B) which consists of thirty questions on the additional privileges of a General Class operator license and the 13 or 20 wpm telegraphy examination. We seek comments on this proposal.

(lots snipped)

12. Section 97.501 (would be)is revised to read as follows:

97.501 Qualifying for an amateur operator license.

An applicant must pass an examination
for a new amateur operator license grant and for each change
in operator class. Each applicant for the class
of operator license grant specified below must pass, or otherwise
receive examination credit for, the following examination elements:

(a) Amateur Extra Class operator: Elements 1(C), 3(A),
3(B), 4(A) and 4(B);

(b) Advanced Class operator: Elements 1(B) or 1(C), 3(A),
3(B) and 4(A).

(c) General Class operator: Element 1(B) or 1(C), 3(A) and 3(B);

(d) Technician Class operator: Element 3(A).

13. Section 97.503(b) and (c) are revised to read as follows:

13. Section 97.503(b) and (c) are revised to read as follows:

97.503 Element standards.

* * * * *

(b) A written examination must be such as
to prove that the examinee possesses the operational and
technical qualifications required to perform properly
the duties of an amateur service licensee. Each written
examination must be comprised of a question set as follows:

(1) Element 3(A): 65 questions concerning the
privileges of a Technician Class operator license. The
minimum passing score is 48 questions answered correctly.

(2) Element 3(B): 30 questions concerning the
privileges of a General Class operator license. The
minimum passing score is 22 questions answered correctly.

(3) Element 4(A): 50 questions concerning the
privileges of an Advanced Class operator license. The
minimum passing score is 37 questions answered correctly.

(4) Element 4(B): 40 questions concerning the
privileges of an Amateur Extra Class operator license.
The minimum passing score is 30 questions answered correctly.

(c) The topics and number of questions that should
be included in each written examination question
set are listed below:

Topics: Element: 3(A) 3(B) 4(A) 4(B)

(1) FCC rules for the amateur radio services. 15 4 6 8

(2) Amateur station operating procedures. 5 3 1 4

(3) Radio wave propagation characteristics of
amateur 4 3 2 2
service frequency bands

(4) Amateur radio practices. 8 5 4 4

(5) Electrical principles as
applied to amateur station 6 2 10 6
equipment.

(6) Amateur station equipment circuit
components. 4 1 6 4

(7) Practical circuits employed in
amateur station 3 1 10 4
equipment.

(8)Signals and emissions transmitted by amateur 4 2 6 4
stations.

(9) Amateur station antennas and feed lines. 6 4 5 4

(10) Radiofrequency environmental
safety practices 10 5 0 0
at an amateur station.

97.505 Element credit.

(a) The administering VEs must give credit
as specified below to an examinee holding any of the
following licenses and documents:

(1) An unexpired (or expired but within
the grace period for renewal) Advanced Class operator
license: Elements 1(B), 3(A), 3(B) and 4(A).

(2) An unexpired (or expired but within
the grace period for renewal) General Class operator license:
Elements 1(B), 3(A) and 3(B).

(3) An unexpired (or expired but within
the grace period for renewal) Technician Plus Class operator
license: Elements 1(A) and 3(A).

(4) An unexpired (or expired but within the
grace period for renewal) Technician Class operator
license: Element 3(A).

(5) An unexpired (or expired but within the
grace period for renewal) Novice Class operator license:
Element 1(A)..

(6) A CSCE: Each element the CSCE indicates
the examinee has passed.

(7) An unexpired (or expired less than 5 years) FCC-issued commercial radiotelegraph operator license or permit document: Element 1(C).

(8) An expired FCC-issued Technician Class operator license document (or proof of having held the document) granted before March 21, 1987: Element 3(B).

(9) An expired, or unexpired, FCC-issued Technician Class operator license document (or proof of having held the document) granted before February 14, 1991: Element 1(A).

(b) No examination credit, except as herein provided, shall be allowed on the basis of holding or having held any other license grant or document.

15. Section 97.507 is revised to read as follows:

97.507 Preparing an examination.

(a) Each telegraphy message and each written question set administered to an examinee must be prepared by a VE holding an Amateur Extra Class operator license.
(snip)

(d) A telegraphy examination must consist of a message sent in the international Morse code at no less than 5 wpm for a minimum of 5 minutes. The message must contain each required telegraphy character at least once. No message known to the examinee may be administered in a telegraphy examination (damm!:-)). Each 5 letters of the alphabet must be counted as 1 word. Each numeral, punctuation mark, and prosign must be counted as 2 letters of the alphabet.

I can't see that this is any different that getting a licence just to make contacts on HF (Voice, Morse, SSTV, whatever). In all cases, this is simply appliance operating (no knowledge of the internals is required). There are many Amateurs whose whole involvement in AR is swapping QSL cards and getting awards.

While such things are of no interest to me personally, I can't see that my (or anyone else's) preferences in Amateur Radio _Operating_ really have anything to do with what other people enjoy.

If they have a licence and as long as they do not break the regulations, it is their hobby and they have every right to do what pleases them, not you, not me nor anyone else. Otherwise, our interests would soon be dictated to by the whims of others.

Absolutely. A few years ago I was involved at work in HF SSB communications in which it was necessary to change frequencies instantly and often, without any time for retuning.
We were working statewide practice drill simulations of a massive earthquake relief effort and several divergent governmental and private agencies and groups were involved, one of which was the state National Guard, which had a HF SSB network statewide, with a 100W SSB transceiver and a B&W resistive-loaded folded dipole located at each Armory statewide. My function was to interface the Guard SSB net with a public safety FM net as well as work the statewide Ham Radio emergency net as needed, and handle traffic to and from the command operations center. My rig was a Kenwood TS430S, as this was before the time of the internal autotuner. We had been granted authority to use the broadbanded '430 on the NG HF net, which does not fall under FCC regulations.

The B&W antennas worked flawlessly. With the several frequencies loaded in the '430's memory bank, switching from net to net was a snap. Of course, signal

strengths were a little below that which would have been the case with discrete antennas optimized on each frequency, but whatever loss sustained was unnoticable. We handled SSB traffic statewide, at distances ranging from 40 to over 300 miles with no problems whatever.
Frequences ranged from 3.9 to 8.6 mHz. These emergency tests were repeated several times throughout the '80's and each time the B&W antennas worked exactly as needed.

It appears to me that sometimes in our zeal to make things work the very best possible we tend to inadvertantly engineer ourselves out of business. Circumstances should be the determining factor in selection of modes and gear, not optimal engineering factors when they are not necessary to the situation at hand.

Dick W0EX.

I have used DX Base and it has been good. I have experimented with LOG EQF since that is what Mark, 8P6JG, uses and I am his QSL manager so getting log info would be easy.....

LOG EQF demos can usually be found on ham BBS systems like Cleveland Hamnet.....

Come back down to Earth. Most of our day-to-day HF QSOs are copied by
ear; that may bother you, but it's a fact. What NASA is able to do in
deep space is not going to make QSB and lightning-generated QRN go away;
machines may do better than my ear, but I *want* to hear the other
fellow's voice or fist - no amount of what NASA or the military does
with its SOTA gear will change my desire to hear the other person.

>>NASA's mission statement is quite a bit divergent from ours. Regardless,
>>if we had a fleet of sub-contractors building gear for us at the taxpayer's

>inexpensive low power equipment than we currently generally obtain if we
>weren't so hung up on OOK Morse.

I'll say it again: I (and apparently most other hams) *want to hear by
ear* (not copy by machine) the other party. Those on a tight budget will
continue to use analog equipment. And a number of us who choose the
minimalist approach will contiue to build our own gear utilizing as few
junkbox components as possible (which is part of the challange). That this
runs counter to the work of the NASA and military communications engineers
is of no concern to this hobbiest. They have taxpayer money and academic
degrees in communications engineering; I have neither.

>>That you desire to constantly compare amateur radio to NASA (or to the
>>military) just shows you live in some fantasy world, wanting to emulate
>>something you're not. Come back down to Earth, Boys.

>NASA and the military are good benchmarks for what it is possible to do,

to complete their missions; it would be a rare amateur QSO in which
the success of one's communication would make a difference in national
security, or the loss of a multimillion dollar space project,

>NASA for weak signal work, and the military for operation against a hostile
>jamming background. The techniques they use can have application
>to amateur radio operation as well. Often we need to operate under weak
>signal conditions, and at least on HF, we are always faced with noise and
>interference situations which are similar to the military jamming problem.

For QSOs conducted by ear, we have the option of turning off the radio;
neither NASA nor the military have such an option.

>It is a pity that we have to look to these agencies for examples of good
>techniques. At one time amateur radio was the pacesetter for this sort
>of thing.

Of the million or so amateurs of this century, only a fraction of a
percent conducted R&D - these were not the bakers, bankers, bricklayers,
and barbers, but rather the Collins and Yagis whose profession was RF
engineering and who had corporate/campus labs at their disposal.

>But most amateurs today seem to believe that the techniques
>developed by their great grandfathers are the ultimate,

Almost all of our great grandpas were copiers, not researchers; they,
like most of us, duplicated the efforts of the tiny number of researchers.
That we follow in their steps must mean we've happy with the techniques,
and our needs are not much greater than their needs.

>and that any technique developed since then is worse.

That's too harsh. How about "and any technique developed since then
might not be necessary for our day-to-day comm needs; we've found our
niche and are very content with where we currently reside"?

For Sale: Icom IC-T22A

I have a like new Icom IC-T22A 2-Meter HT for sale.
Comes with Book, Shipping Box. Has Mars Mod.

The IC-T22A is 6 mounts old. I bought it for my wife
when she got her Tech License and found she didn't use
it but 3 or 4 times. So am going to sell it and get her
a Dul-Band mobile rig. I paid $239.95 for it and will
sell for,

Nobody is trying to force you to do it their way. Why do you
want to force other people to do it your way?

> I'll say it again: I (and apparently most other hams) *want to hear by
> ear* (not copy by machine) the other party.

I'll say it again: Nobody is trying to force you to do it any other
way. Why are you trying to force people to do it your way? What is
wrong with live and let live?

> ... it would be a rare amateur QSO in which
> the success of one's communication would make a difference ...

So CW may not be the end-all do-all mode after all? :-)

>that good stuff)
>

Well, I use LOG-EQF. I think it's the most straight forward program out
there. I looked at about 6 different ones. It imports almost all other
logs including CT logs.

I use CT for contesting and then import the log into EQF.

You can find a demo at: http://www.itis.net/eqf

I also would like to say that when I had questions about the program before
I paid for it, Tom N3EQF answered my emails in about 10 minutes each time.
That was impressive. Good luck

If you will refer back to the days when the FCC *did* do enforcement, you will clearly see that rule violation proceedings filed as criminal charges through the federal criminal justice system were extremely rare, particularily with ham radio operators and even with commercial entities, to the point of almost being nonexistant. Almost all violations were handled as administrative sanctions, usually in the form of actions against the license issued to the individual or corporation. In some cases, mostly concerning violations by commercial/broadcast licensees, notices of appaent liability resulted in monetary forfietures.
Many actions were merely advisory notices of violation, some with with a mandatory reply being ordered explaining the circumstances surrounding the violation and guaranteeing future compliance.

It's a real stretch to convert that regulatory system to the criminal justice scenario you have drawn above and does a damaging disservice to the ARRL's serious, indeed creative attempts to bring some kind of order to the increasingly chaotic ham

bands.

For your $1000, you'd better be factoring in an antenna, coax, tower, rotator and lightning protection. Of course, the tower and rotator are optional if you will be using a wire antenna.

Stay away from the TS-8XX and TS-5XX radios (as well as other pre-80's radios) unless you fully understand the art of dipping and tuning of tube rigs. Although they are fine radios, most new hams are unfamiliar with those techniques so they are best left to the old timers out there. Also, they require retweaking every time you change frequency a little bit.

If it were me, I'd settle for a used Kenwood TS-430S or Icom IC-735 (oh, you'd better figure on the price of a 12 volt supply for those radios). Those "all solid state" radios require NO tweaking when changing frequency (unless you've also purchased an antenna tuner). If you get a newer rig with a built in tuner, you can even avoid THAT inconvenience. Plus, you get memory channels for jumping back to an old favorite.

Hope this helps.

Radio Randy

Funny, my TS-850 and my friends' TS-870 both seem to be missing their
tubes... also, the TS850 was only recently discontinued, the TS-870 is still
a current model...

We have a bunch of secret codes for all of the above.

QRS = slow down

QRL PSE QSY = piss off, the frequency is in use.

You are suffering from a very common disease, seen everywhere in ham
radio today in 1998. It is called 'Lack-of-Elmer-Itis'.

I would highly recommend that you find a local ham who is willing to work
with you, on one of the HF bands, to increase your skills until you feel
comfortable on your own. The one's best qualified usually fall into the
'old buzzards' catagory.

If you can't find one, I'd be more than happy to volunteer to try and help you
as much as I can via email. I'm not sure where you are located, but there
is also the possiblity that we can hear each on at certain times on 15 meters
also.

Yes Jeff, all you say above is correct and true. I have a relativly large library of league publication's. The point I was trying to make is that the league, for MANY year's now has lost touch with reality. Remember back in the 60's when they came up with incentive licensing? Sure you do Jeff, they almost destroyed amateur radio. They accomplished NOTHING but to create a caste structure in amateur radio. I will never forgive them for that one. Hardly anyone except the holder's of the "Class A" license was in favor of it. But they pushed it through anyway. Look at the way they are doing this latest attempt at re arranging amateur radio. Heck they are going back to the original (post WW2) licensing for all practical purposes. They are interested in making money, job security, and making the commercial manufacture's happy. They have been doing this for many year's. It is really strange to note that the FCC immediatly came up with a NPRM to accomidate the league proposal. I'm sorry Jeff, this smack's of conspiracy.

I am not totally against this action. In fact I really tend to like it. It's the way they do it. It's wrong, pure and simple. That is my major complaint with the League. Another BIG problem is the way they took over amateur monitoring, with the idiotic expectation that they could handle it. They told the FCC they would handle the amateur operators. The FCC said WONDERFULL. What is the result? Barney Fife, but with no bullet. And the FCC not giving a crap, and doing NOTHING.

Mark is dead on with his comments. What Brian fails to see is that
all the preliminaries leading to this NPRM have been nothing
but mock battles. The FCC NPRM has opened the door and
said..."let the games begin". THIS is now the real thing.
This is now the battlefield of debate.

>All it does is provide a December
>deadline for submitting comments on what the FCC has decided are the
>germain issues

And the fact that Brian doesn't see this as being THE real
debate battlefield is amazing.

>(many of which have never been touched upon in r.r.a.p. - to

Exactly. And if anyone thinks the end result is going to
be the status quo just because a bunch of hams spout
there hysteria about work effort, tradition, and other subjective
silliness, then they are in for one rude awakening. The

FCC didn't open this NPRM with an thought that the
status quo would remain. That is totally clear to me in
the text of the actual NPRM. Indeed, at the minimum are
those actual changes proposed. To stop any of those
changes requires clear and compelling reasons from those
oppsed to the changes. Those in favor of the changes
need only state that they agree with the well thought out
logic as put forth in the NPRM. Those that want to go
further have been asked "how far" by the FCC's
specific requests for input on several specific areas.

>Where are you getting this "us" crap? Do

Indeed, there's no hurry. But the long comment period implies (IMHO)
that the FCC wants to do this ONCE and only ONCE and not revisit
this again for many years.

>Maybe the FCC won't change the code test speeds at all . . maybe they'll

The FCC will NOT end the tech license. NOTHING in the NPRM
gives any hint of that at all.

>Maybe they'll just say, "Hey, we did our mandatory biennial review and

>FCC jacked up the speeds and knocked out priveleges right and left.

Incentive licenseing did NOT jack up code speeds. The speeds
were already 5 wpm (tech); 13 wpm General. 13 wpm Advanced.
Extra may have been lower, but that sure doesn't map to your
general comment about raising code speedS.

>The FCC
>mentioning a review of code speed proficiency tests as one of the many

>codeless or 5wpm licensees on HF bands, or for that matter any insight at
>all into the entire topic.

True as to wher it may end. BUT clearly the NPRM wants to
address code speeds and WILL address it in the final output
based on reasons for/against.

>> >Oh, what a crushing blow for all of those promised free Bread and

>matter how long it takes to get your money's worth . . "

Codefree HF will come about...once the S25.5 treaty clause
goes away. That's not an issue in this NPRM.

Cheers,

>the license system. "Leave it alone!"

use your head and think about it. the entry level HF licenses [novice
& tech plus] now have a 5 wpm code exam. the FCC proposal will drop
these two classes, so the new entry level will be the General. the
General now has a 13 wpm code exam. do you really think the FCC is
proposing that the new entry level license code exam be raised from 5
wpm to 13 wpm? I DO NOT THINK SO. They will keep the 5 wpm code exam
for the entry level HF license, but that license class will now be the
General.

1106. Yaesu FT-530 cheat

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-13 00:00:00 UTC
From: Amber Webb <webba@dma.org>
Message-ID: <6qtohc$s7g@bgtnsc03.worldnet.att.net>
Source record: 164852

Do you have a Yaesu FT-530? Is it modified for the European/Extended receive?

For those who don't know, if you have the extended receive modification on an FT-530, you can receive 110-180 MHz, 300-500 MHz, and 800-950 MHz. This cheat, however, will allow you to see 110-180 MHz, and 300-950 MHz! The 300 MHz split between 500 and 800 blocks out a lot of good frequencies, and they are unblocked, if you simply know how to access them!

Check this out:

1. Tune to the VFO. Type in 800.000 MHz. Press FM.

2. While the radio is in Function mode, turn the dial counter-clockwise. The radio will count down into the 700's in 1 MHz steps. (Do NOT turn the dial clockwise as it will reset to 300.000 MHz) Keep the dial moving and the radio will stay in function mode.

3. If you're interested in a particular frequency, (let's say it's 749.550 MHz) tune to the next highest MHz rating. (750 MHz) Wait and the Function mode will go off. Then turn the dial counter-clockwise again, and voila, it counts down in KHz steps.

4. To program into memory: Tune to the desired frequency using the above steps. Press and hold FM. The memory number will start to flash. Pick a memory with the dial, and then press FM again. Now you can reference that frequency again!

More ideas:

When I started playing around with this, I saved memory 38 as 775.000 MHz, 37 as 750.000, 36 as 725.000, all the way down to 525 MHz. Now if I'm interested in a particular frequency, I can go to the next highest memory, press MR again, FM, then tune down from there. A lot quicker if you ask me, and who uses 38 different 70cm memories, anyway?

Happy scanning!

-Paul

That's very typical of all such organizations. I'm a mechanical engineer and the American Society of Mechanical Engineers is essentially a big technical bookstore these days. It's how they make important technical informtion available, which is part of their charter, and keep the dues at a manageable level. I don't see anything at all wrong with the ARRL selling publications, it keeps us in touch and they get to eat.

> As for this "NEW" restructuring plan. Look's a lot like it was way
> back before the fiasco known as "incentive licensing". A wonderfull
> ARRL proposal that nearly destroyed amateur radio.

I got caught with a General when they implemented the Advanced and Extra licenses (the Extra was available long before incentive licensing happened) and had to go back and take more tests. After that flap and dust settled, ham radio wasn't "fixed" OR hurt by incentive licensing. Incentive licensing ticked off some people (like me) but certainly didn't come even close to destroying ham radio, it was a notable no-counter. And I'll just bet we see the same non-phenomenon on this pass. We're all blowing hot air.

Got this off the fcc website: an e-mail form for commenting on the
big proposal:

(cut this line and all above)
<PROCEEDING> put-docket-number or rulemaking-number here
<DATE> filed-date-in-mm/dd/yy-format
<NAME> applicant-or-petitioner-name-last-first-mi
<ADDRESS1> address
<ADDRESS2> address
<CITY> city
<STATE> state
<ZIP> zipcode
<LAW-FIRM> law-firm
<ATTORNEY> lawyer-name
<FILE-NUMBER> file-number
<DOCUMENT-TYPE> 2-letter-document-type-code (use 'CO' for comment)
<CONFIDENTIAL> y-or-n
<PHONE-NUMBER> sender-phone-number
<DESCRIPTION> short-description-of-document
<NOTIFY> e-mail-address-response-destination
<TEXT> actual text of message...
Dear FCC...

(cut this and all below), email to ecfs@fcc.gov
Keep the <>'s and the stuff between < and >, replace the rest of the lines
with real info. AFAIK, the docket number is 98-143. Got this off the top
of the ../fcc98183.txt document. I don't know what to put for "file number",
I used "1". Think it refers to *my* file, not an FCC one.

Edit using an ASCII editor, then e-mail it to ecfs@fcc.gov

An automatic email receiver takes it in, and it needs all the <TAGS> so it
can make sense of it.

It isn't necessary to use a PLL to do this. You can use Direct Digital Synthesis (DDS) which can make this sort of change without even losing phase continuity. One system I worked on produced wide band phase continuous frequency sweeps using this method. The scheme isn't new, as it had been in use since at least the late '70s, early '80s.

Oh, so now you _admit_ you got on 3865 and cried big, old tears? Actually,
your little ruse went on for maybe a night, then they found you out and told
you to hit the road. Now that was funny! How are things at the rat-trap,
condemned shack you live in? Is "Dead Donna" keeping well in all that summer
heat?
Oh, and what IS a "Shotwave listener," retard? Is that some kind of drug-dealer
lingo, or is it the result of you having a substandard education?

<waiting for O' Brainless' dimwitted "response.">

> I would say judging by your stupid,idiotic,homosexual oriented posts

Of course, a 9th grade dropout and three-time felon has _no room_ to judge
anybody.

I'm not like a three time convicted felon who has to eak out a pitiful
existence driving a truck, which is a disquise for drug-dealing, and have to

live in a rat-infested, no-indoor plumbing, tarpaper shack, am I?

It's getting to the point that I really dont give a damn who these
idiot's are. They can't use a callsign on HF, they post with some
stupid name, they do not have the balls to stand up and be identified.
Why should we waste our time on them? Just listen to them, and see
what they say on the NG's, that's all the proof I need to know they
are trash.

w4nti@my-dejanews.com wrote:

The point I was trying to make is that

> the league, for MANY year's now has lost touch with reality.

Well, your version of reality may not be the only version existant. You might keep that in mind.

> Remember back
> in the 60's when they came up with incentive licensing? Sure you do Jeff,
> they almost destroyed amateur radio. They accomplished NOTHING but to
> create a caste structure in amateur radio.

Wrong. Many, like myself found reason to upgrade from our General class status. Granted, mistakes were made. There could surely have been better accomodation, particularily for oldtimers who were shunted aside. A "grandfather" clause based on x number years of tenure or some such. But--

> I will never forgive them for
> that one. Hardly anyone except the holder's of the "Class A" license was
> in favor of it. But they pushed it through anyway.

VERY WRONG. My old mentor, a "Class A" from the early days, at the time of Incentive Licensing an Advanced, was very disappointed that he would lose privileges. He told me that he had been assured years earlier that the Class A test he took in the 40's was the last ham radio test he would ever need to take. The Class A licensees lost the most as far as I could determine, and that was not just the privileges. They felt that ARRL has sold them out. But my oldtimer mentor still kept his ARRL membership.Technically skilled and a good CW operator, he could have easily passed the Extra test but could not travel the 260 miles to the FCC office to take the test due to poor health.
The Advanced operators with tenure should have been grandfathered into Extra. But if that was done, surely cries of "discrimintion" would have resulted from some quarters. So the ARRL bit the bullet and did what seemed necessary to salvage a technical hobby from the doldrums. It was a success for many of us. For many who were not motivated to study and upgrade, and any others such as my old mentor, well you know the result.....

> Look at the way they
> are doing this latest attempt at re arranging amateur radio. Heck they
> are going back to the original (post WW2) licensing for all practical
> purposes.

Yeah, the bitchin' about Incentive Licensing has sensitized ARRL into a sort of paranoia about changing things..Some of it has caused a movement to return to

pre-Incentive Licensing status...I doubt they would have submitted a proposal for change at all if not for the strong indications that FCC intended to make changes whatever ARRL's position.

All this does NOT make ARRL anything but what it is... the only amateur organization in the USA of any significance to the hobby's future. Criticize it if you see fit, but if you don't support it and help give direction to it, blame no one but yourself for the future. Whatever ARRL's past failings, it is still the only real hope for the future of the ARS.

> They are interested in making money, job security, and making
> the commercial manufacture's happy.

EVERYONE is interested in making money, without it there is no fuel for the future and no way to get ANYTHING done. The ARRL publications are priced well below par with most commercial technical publications and the profits are used to maintain ARRL functions, functions which supoport YOUR hobby and that of every other licensed American ham. They fund some very high quality employees who are very important to their mission of support to the hobby, and salaries paid are NOT on par with those of industry....Most of those people could do better working on the job market, but life wouldn't be nearly as interesting . :-))

> They have been doing this for many
> year's. It is really strange to note that the FCC immediatly came up with
> a NPRM to accomidate the league proposal. I'm sorry Jeff, this smack's of
> conspiracy.

Your interpretation of the NPRM is at odds with mine, in fact most that I've read here....Just because there a couple of similarities, such as number of classes, it doesn'tfollow that the entire proposal "smacks of consipricy". There are more open questions than anything else, particularily WRT points of the most contention. Had your paranoia checked lately?

>
>
> I am not totally against this action. In fact I really tend to like it.
> It's the way they do it. It's wrong, pure and simple. That is my major
> complaint with the League.

Well maybe you should run for Director and Do It Right, if you can find the support.

> Another BIG problem is the way they took over
> amateur monitoring, with the idiotic expectation that they could handle
> it.

Anything was thought to be better than the *nothing* that existed.

> They told the FCC they would handle the amateur operators. The FCC
> said WONDERFULL. What is the result? Barney Fife, but with no bullet.
> And the FCC not giving a crap, and doing NOTHING.
>

Exactly the result you would expect when no backing whatever is existant. Can't blame ARRL for that, it's the Gov't fear of litigation, political interference and such that is so pervasive today that has caused the withholding of Gov't support. It's eating out the core of American society.

You can bitch all you want about the ARRL but one thing has become quite clear to me over the years---- (and I'm one who has done a full share of said bitching, even dropping membershsip when some particularily offensive action eminated from Newington) ----Without ARRL ham radio would become unrecognizable, probably sooner rather than later. It may very well do so even with the best effort ARRL can put forth.

Dick W0EX.

1124. Dangerous Thoughts

Newsgroup: rec.radio.amateur.misc
Date: 1998-08-13 00:00:00 UTC
From: Gareth Crispell <gareth@capecod.net>
Message-ID: <35D326F2.5EE70EC6@capecod.net>
Source record: 164870
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

In these times of socially enforced political correctness, some people what to look upon you as though they were seeing evil incarnate for daring to suggest that an event or hobby may not be suited for the great "everyone". The "cell phones for all mentality" is at best a sophistic philosophy, and at worse, downright dangerous. When pilots wish to upgrade their license status from VFR to IFR, you do not see, or hear them weeping and moaning about the difficulty of the exam requirements. You do not see them forming international talk groups for the purpose of lobbying the FAA to make the exams easy enough for everyone. What DO they do? They rise to the CHALLENGE on both a personal level and as a group. They study their butts off and find the great personal satisfaction of EARNING a new license privilege. Now I realize that piloting and amateur radio are two different buckets of fish. However, just as piloting is not for everyone, I believe ham radio may not be for everyone. It is a very specialized hobby and SERVICE which has an almost limitless level of technical competence we can strive for. Please MR. ARRL, let us not simply give away this great hobby and service. UPHOLD the standards and not give in to the temptation to seek the lowest common denominator for the sake of a handful of coins.

best wishes to all N1MSV (gary - on the cape cod salt marsh)

Gareth http://www.capecod.net/~gareth

I am desperate for a wiring diagram for a programming cable for the Maxon Sl500 portbale. THe seller misprogrammed all the radios, and won't help. I have the software, and a cable with a crushed end, but no schematic. It should be an SMP 4004 or 4005. One does the SL 500, and the other does the rest of their portables. Any help would be GREATLY appreciated. Thanks
Jeff WA1VQY@EFORTRESS.COM

You are making assumptions....The FCC has not said it will lower the entry level cw test to 5 wpm. It's open for discussion. They could offer an alternative digital test. Don't get me wrong. I am all for keeping the 13 wpm code requirement. I also think it's wrong to be making assumptions.... Let's get facts. By the way this is a "Proposal".... nothing is "For Sure!"

Cheers,
W6IQ

Boy oh boy, must have really irrated the "real" TheLibNet". You know boy
All this has been written before, so I'll keep it as brief as possible.

1. Im not now, nor have I ever been on welfare.

2. I see more of your post's here than anyone else. Guess instead of
sleeping your posting. Or are you using "company time" ??

3. After getting my last discharge from the Army I went to work in Fla.,
Ala, Marshall Islands, U.S. Government.

4. If I could "easly hold a job", then I would do so.

5. The Vietnam war was a political exercise and a mean's of testing
weapon system's and tactic's. Not to mention allowing Linda Byrd
Johnson a way to clean up with construction equipment. It cost this
nation a KIA body count of over 58K. And not only destroyed my
generation, both pro and con about the war, but the succeding generation
and maybe even the next. Did you know that more than twice the KIA

number have committed suicide? Did you know that the U.S. Government used experimental mind altering drug's on us in-country? Did you know that these same type's of drug's are used when a veteran seeks help for P.T.S.D.? Did you know that agent orange, actually the chemical dioxin, will kill ALL that survived that war? It's called perephial neuropathy (SP). So don't call me a whinner, you creep. If you haven't been there, you don't know shit.

6. You keep yelling "get a job". Maybe you should get the "real fact's" about ALL my medical and mental problems. You sure as hell wont get them from me here. I'd suggest you research PTSD, Dioxin, VA proceedures for determination of disability, just for a start. Maybe as a side project you could pick up a copy of "Vietnam Wives", I dont recall the author. You may find the chapter on experimental drug usage in nam of interest. Pay particular attention to who wrote that chapter and his title. Hey, here is another thought, walk up to a vet and say the thing's to him, in his face, that you say to me here. That way you can get a real feel for the effects of PTSD. But I'd suggest you make sure you can get the hell away fast first. Ask him if he had a good night's sleep, you may get lucky and he did.

7. Oh I heard you last night, but to be honest you sounded like such a geek I just ignored you. So, Ill pay real close attention to your baby crying for my attention, and I'll give you a big howdy. Just so you feel like somebody.

8. You keep refering to "pill popping". I take only those pill's prescribed to me for my condition. None of which are related to PTSD. I refuse to take them, and have not taken them for many years.

9. I do not like Jack Daniels. I prefere Jim Beam, thank you.

10. "Where do you dig up these sub-human zombies? Are you getting direct shipments from the boneyard in Treblinka?"

And these folk's wonder why I call them Neo-Nazi's.

Norm,

I like "Log-EQF" myself. Here is the address of the gentleman that
made it.

Tom Dandrea, N3EQF
396 Sautter Drive
Coraopolis, PA 15108-9244
USA

(412-457-2584)

I don't use it for casual logging. I use it mainly during the various
contest's I like to play in. I believe he can send you, or tell you
where to download it from, a freeware version for evaluation.

If you need any further help, send me an e-mail.

Yeah they do. Timewave. It's called a DSP-599zx.

Adam. About the same advice as given by Dan. When you go back on CW, QRS is the code for slow down. I have (and continue) to use it often. If I were to think of my first 6 months of contacts, they all probably took a half hour to 45 minutes and I probably got nothing more out of them than name, QTH, rig and wx! But it does get better, it does get fun, and before you know it, you won't even be thinking about it again. I will offer this word of advice though, limit your cw practice to no more than 20-30 minutes at a stretch. Personally I think it's better to practice 2 or 3 times a day at 20 minutes, than once for an hour.
Good luck and I hope to hear you on the bands.
Don Vlack K2DV

Give us a break, Dick. The whole argument is over the rabid procoder
contention that, "CW gets through when no other mode can" which means
that it gets through on a dead band. There are zero CW signals on 10m
at this very moment.

Hi Cec - *Very* nice job of taking my comments out of context! The
discussion was whether we must follow in the footsteps of NASA and
the military. I say "no" since, as an amateur hobbiest, my mission
and goals don't begin to approach those of other users of the spectrum.
I've found my niche (homebrewing simple gear from scratch) and wish to
remain right where I reside. I do further my knowledge of electronics
on a daily basis and attempt to put it into practice within the realm
of my niche, so no fair accusing me of violating S97.1. Now stay on
topic or I'll box your ears.
KH Z

SUBJECT: Re: Creative editing and TheLibNet

*** KC8JBO:
...
Who, you dullard? At least get your lies straight.
...
Is that why you cowardly post from dejanews, Boob?
Dan, this one must be TR!

*** w4nti:
...
It's getting to the point that I really dont give a damn who these
idiot's are. They can't use a callsign on HF, they post with some
stupid name, they do not have the balls to stand up and be identified.

*** CBRambo:
...
You tell 'em, Vietnam Dan!

And LibNet is right...would you PLEASE get a job?

"Where's that big 'ol CB RAMBO??"

SUBJECT: Logging program for Amateur Radio?

*** Elvis:
Would someone please tell me if there is a good Amateur Radio Logging
program out there?(time contacted, qsl'ed or not, call sign, etc...all
that good stuff)
...

*** w4nti:
...
I like "Log-EQF" myself. Here is the address of the gentleman that
made it.

Tom Dandrea, N3EQF
...

*** Bobski:
...
I have used DX Base and it has been good. I have experimented with LOG EQF
since that is what Mark, 8P6JG, uses and I am his QSL manager so getting
log info would be easy.....

...

SUBJECT: Re: KC8JBO's recent homosexual "Creep-Speak" outbursts

*** thelibnet:
...
Hey Thumper, when you get done using the soft touch on this A.D.D.
bat-brain, would you mind if I whip him like a rented mule right out of here?
He has been run out of so many newsgroups already that one more won't

*** w4nti:
...
And these folk's wonder why they are called Neo Nazi's.

*** KC8JBO:
...
I think the rumpjumpers are all subscribers to "A$$Master" magazine. That or
"Sheep farmers in Dixie."

KC8JBO EM99

SUBJECT: Proverbs for the Shortwave Enthusiast

*** the_kool_ruler:
Please let me know how you feel about these Proverbs for the SW Enthusiast:

...

*** KC8JBO:
...
"Superstition is like a magnet. It pulls you in the direction of your belief."
...
Too stupid to get one?
...
Stumpjumper SUCKBOY!

*** thelibnet:
...
Hey Thumper, where do you want me to tattoo the Mark of the Beast on this
cattlecar candidate? He already has a number on his wrist.
...
Hardy Har Har. A no-code tech with buck teeth and one huge eyebrow calls
...

SUBJECT: 49 Mhz to 6 Fm - How difficult?

*** WILLIAM W MUNSIL:
How difficult is it to put a Radio Shack TRC-509 Walkie talkie on
6 meters, anyway? Who sells crystals and how much do they cost?

*** Michael Black:
Go over to rec.radio.amateur.homebrew This is being discussed right
now. It's also been discussed over there in the past.

Michael VE2BVW
...

*** CBRambo:
...
Would be more enjoyable to do the opposite...putting a 6m radio onto 49Mhz.
Loads of fun for you and your neighbors ;-)

The last time one of there previous members was brought to the attention
of certain jewish organizations, he ended up with a inability to operate
his radio any longer. Any of you new guy Nazi's remember WB4GDP? Bet
not.

However, there are a LOT of them who utilise HF because their economic
situation doesn't permit buying satellite equipment. That's why there will
always be a need for hf communications. At least for a while.

Josh, I agree. And _if_they are stupid enough to call you on the telephone, do like I did and report the call to the telephone company. They have a lot of nerve, with somebody in the house who just had cataract surgery (not me) and startling them when the phone rings last night.

>>KC8JBO EM99
>
>the 3rd world is a large consumer of sat com equipment.
>bypasses the expense of cabling the country....

Indeed so. Many underdeveloped nations are making a leapfrog over
the wired era by going directly to wireless solutions of various sorts.
They use cellular as their *only* phone system, and satellite for their
long distance links. It is very much more cost effective than laying all
the copper which would be required to give equivalent service.

We're actually handicapped by the fact that we have a large copper
wired infrastructure in place. In most places it is fully depreciated
so more modern techniques suffer an unfair disadvantage attempting
to compete with it. Thus some "underdeveloped" countries have
a more modern communications system than we have.

And of course DBS is no respecter of boundaries. From GEO the
signals fall on the developed and the underdeveloped alike. They
can avoid the cost of establishing a terrestrial broadcasting service
by going straight to DBS.

I don't know about "CHALLENGE" or "EARNING", but pilots get IFR
ratings so that they'll be competent to fly in conditions of impaired
visibility. There are few complaints about the system because the
knowledge and skills they are asked to demonstrate are directly
relevant to flying IFR, and are matters directly affecting life safety.
The same cannot be said for the byzantine amateur radio licensing
system where materials tested and privileges granted have very
little correlation to each other, and virtually none to life safety.

Lookit CB radio, ten MILLION no-code users squashed into a weenie little chunk of non-toxic and otherwise useless spectrum space and they don't have a chance in hell of acquiring any more spectrum space because it's trash radio and DANGEROUS.

> When pilots wish to upgrade their license status from VFR
> to IFR, you do not see, or hear them weeping and moaning about the
> difficulty of the exam requirements.

. . or they are content to fly VFR forever because they just need a few hours of stick time once in awhile to fulfill their urge to fly. I fly under FAR 103, the aviation equivalent of the no-code tech class which is extemely restrictive. I have no intention of "upgrading" because I find that despite the restrictions I'm quite content with living within my restrictions, both legal and personal.

> You do not see them forming

> their butts off and find the great personal satisfaction of EARNING
> a new license privilege.

Correct. I'd be a bloody menace if I flew in Terminal Control Areas and such, I'm not QUALIFIED to do that. If I wanted to fly in TCAs I'd have to do some serious studying and take difficult "upgrading" tests and I accept that and I don't go around bitching it, neither do any of the other 2-cycle ragbird jocks I know, at least not among those who have their heads on straight.

> Now I realize that piloting and amateur
> radio are two different buckets of fish.

Same animals in your context. Your concept with respect to any thrust toward dumbing-down any regulated HOBBY is the same, the only difference is the much more severe consequences associated with dumbing down recreational aviation and government testing to minimize those potential

consequences.

> However, just as piloting
> is not for everyone, I believe ham radio may not be for everyone. It

You mean like they did to the public schools in this country? Let's talk about the "benefits" we've been blessed with as a result of dumbing down to the lowest common denominators and political correctness in THAT sphere! Talk about disastrous on a grand scale . .

> for the sake of a handful of coins.

I don't buy the idea that there's any serious coin involved anywhere in this nonsense. That's just a smokescreen being used by some who don't understand commercial realities.

Hi Adam,
Congrats on the tests and keep the faith.

>How do I quickly tell
>someone to slow down?
Just wait until your turn and ask them to slow a bit, I had to do this a lot when I started. If the Ham is any kind of Ham he/she will slow down.

>How
>do you tell someone to piss off who has just broken into your QSO with a
>bunch of CQs?
Well you don't, just because you can hear them does not mean they can hear you.

>How many times will most people repeat, before they think
>"Forget this moron, how did he get licensed in the first place?"
Just tell them on your first round that you are new at this and please have paitence. Most of us like to work new CW ops, kinda like giving back. :-)

> guess I can answer one question myself: the way to copy code
>better is to use it a lot, right?
Yup, you bet.

> I listen to groups and generated QSOs
>on the computer almost every day, then try to make some live contacts.
That's how I learned it. It takes time to build speed, but first just concentrate on getting good, speed will come in time.

>Now granted, I have only been licensed and transmitting for three days,
>but when does this become fun? I have had more fun studying for the
>tests than trying to make contact with folks via CW. (I know, a little
>strange, but I like studying...)
>
After you get over the shock and being nervous, just wait till you get that first QSL!

>Anyway, I am not one of the no-code folks screaming about learning
>morse. I have spent the last two months working hard at it, and finding
>now the disappointing realization that I really am terrible. And it
>doesn't help that of the HF bands open to novice/tech plus, only two are
>halfway active. 80 meters is usually very quiet, and 10 meters is dead.
Either you like CW or you don't. I do. Anyway it takes time to get good, period. God my first 10 or so contacts were horriable, but after a few weeks of getting in there and working it, I noticed I was getting gooder and gooder! :-)
40, and 80 meters are your best bet, but keep your eyes open for 15 and 10.

>I need to pass the higher speed tests to get access to the rest of the HF
>bands, but with this kind of performance it doesn't look likely.

It takes time, don't get down on yourself. You got a year to get it before your written exams expire.

I hope this helps you Adam, but remember the key is to get used to QSO'ing first then worry about getting your speed up.

If you want to sked a QSO I can help out, also there are a lot of others out there who will do the same.

Keep up the good work, and have faith!

Is it posible to modify the newest Ft-50's. I read somewhere that you can perform the mod using the Yaesue software only. Has anyone done this on the latest version of the radio? Where can I get detailed instructions.

Thanks,

Dave

Dear person Taking God's name in vain and hiding behind an alias,

The ARRL is REACTING to the FCC, nothing proactive here. Yes, the ARRL followed your ideology with great failure. They may actual grow in membership as they follow the opinions the rest of the Amateur community has.

BTW, expect increased Technical testing.

From Tad Cook, K7VVV
Seattle, WA August 14, 1998
To all radio amateurs

SB PROP ARL ARLP033
ARLP033 Propagation de K7VVV

Solar activity was up again last week in a big way. Average sunspot numbers were up by 42 points and average solar flux was up over 32 points. The highest solar flux was on August 9 when it was 154.1. The last time the flux was this high was in early 1993.

Over the next few days, Friday through Sunday, look for solar flux to decline to 140, 135, and 130. Solar flux should go under 120 around August 20 and down to 110 around August 22, then increase to over 150 again after the beginning of September. The planetary A index was very high at 69 on August 12, and we should see high A index values indicating geomagnetic disturbances around August 19 and 20.

There is more good news concerning the SOHO satellite, which is used to observe the sun. The satellite has now recovered to the point that it is sending out some data, such as temperature readings.

With solar flux over 150 and the season changing soon to Fall, strong 10 meter openings cannot be too far away. 15 meters should be stronger as well, now that the solar cycle seems to be moving up again.

Sunspot Numbers for August 6 through 12 were 122, 127, 121, 155, 136, 144 and 137 with a mean of 134.6. 10.7 cm flux was 138.3, 145, 146.8, 154.1, 149.2, 150.1 and 147, with a mean of 147.2, and estimated planetary A indices were 69, 28, 12, 4, 14, 9, and 10, with a mean of 20.9.

August 14, 1998
Target: rec.radio.amateur.misc

Welcome to The RSCM Wire, for Friday, August 14, 1998. Yes, the newsletter Is back! After much thought and consideration, and a lot of input from our readers, we have decided to bring the newsletter back.

We have now expanded this newsletter! Several new sections are now available, including a section on current band conditions and DX reports! We would still like to hear from you! If you have any comments, questions, or suggestions, please contact us at w8mmq@juno.com.

Information contained in this newsletter is free for you to use and istribute, so long as credit is given in some way to W8MMQ or the Radio Society of Central Michigan.

In this issue: the FCC has announced its changes for amateur radio; an update on the ARRL's changes for amateur radio; reactions to the two proposals; band threat updates; and much, much more!

The FCC Changes Are Announced
==========
The long-awaited changes proposed by the Federal Communications Commission (FCC) have now been released for public review. For the last several weeks, these changes have caused quite a stir amongst the amateur radio community, because of the way in which they were issued.

It was rumored that the FCC had issued an internally-generated petition for rulemaking, and was attempting to have it passed under the "fast-track initiative." It was also rumored that the FCC was going to leave little or no time for public comment on these changes.

We have included the complete August 11 news release from the ARRL on this story. For complete information, visit the ARRL web site at http://www.arrl.org/.

"The FCC has proposed to phase out the Novice and Technician Plus class licenses, leaving just four amateur license classes in place--Technician, General, Advanced, and Extra. The Commission also has asked the amateur community to express its opinions on Morse code requirements for licensing and testing, but offered no specific changes. And the FCC proposed to permit Advanced class licensees to administer amateur exams up through General class. The proposals were among several suggested rules changes and invitations to comment contained in an FCC Notice of Proposed Rulemaking, WT Docket 98-143, made public August 10.

In proposing to phase out the Novice and Tech Plus tickets, the FCC said ''there appears to be an unnecessary overlap between the Novice, Technician, and Technician Plus license classes.'' The FCC also said that Technician and Tech Plus operators ''predominantly'' use FM and packet on VHF and UHF. In addition, the FCC said Novice applicants last year numbered fewer than 1000, while there were nearly 21,500 Technician applications.

Under the FCC plan, Novice and Tech Plus licensees would retain current operating privileges, but no new Novice or Tech Plus licenses would be granted. For examination purposes, current examination elements 2 and 3A would be combined into a new element 3A. For administrative purposes, the FCC would combine the current Technician and Tech Plus databases into a single Technician database. The proposal would eliminate the 5 WPM code test, Element 1A, as a required element for any class of license.

The elimination of the Novice and Tech Plus license classes would effectively raise the bar for future applicants desiring to gain HF operating privileges, unless the FCC ultimately reduces Morse code testing requirements. Since the General class license would become the entry-level HF ticket under the FCC's proposed rules, applicants would have to pass at least the 13 WPM code test.

The FCC did not propose to change any operating frequencies or license privileges for amateurs. However, the FCC does seeks comment on the disposition of the current Novice HF bands, which carry a 200-W output power limit for all licensees. The FCC invited comment on whether it would be ''appropriate'' to delete the Novice bands and the power restrictions on higher-class licensees and permit Novices to operate CW anywhere on 80, 40, 15, and 10 meters at 200 W output.

The FCC opened the door to comments on all aspects of Morse code testing from the amateur community. In particular, the Commission said it wants to know if hams prefer the current three-level system or would like to see it reduced to a one or two-tier system--and, if so, at what required speeds. The FCC asked whether hams would be willing to trade a reduction in Morse code requirements for additional written elements on newer digital technologies ''which, in part, are replacing the Morse code.'' And, the Commission asked whether it should consider specifying Morse code examination methods, such as fill-in-the-blank or one minute of solid copy, instead of allowing VEs to determine the testing method.

In a related issue, the FCC also seeks comments on how to deal with potential abuses of the current disability waiver for higher-speed Morse code tests. In RM-9196, the ARRL had asked the FCC to require anyone applying for an exemption pursuant to a doctor's certification to first attempt the higher-speed test before examination credit could be given. The League also asked that VECs have access to relevant medical information from the certifying physician. The FCC said the ARRL's proposal would place ''an unfair burden on examinees'' and raised serious privacy and confidentiality issues.

The FCC went along with an ARRL petition and proposed allowing Advanced class hams to be eligible to prepare and administer license examinations up through General class under the VE program. The Commission said the change would permit greater testing opportunities for hams. The FCC also invited comments on whether it should change written examination requirements ''to provide VEs and VECs additional flexibility in determining the specific contents of written examinations.''

Referring to yet another ARRL petition, RM-9150, the FCC invited comments on how it can improve its Amateur Radio enforcement processes. The FCC applauded the ARRL ''for its creative thinking'' in that petition, but said the specific proposal was ''inconsistent'' with the current statutory role of administrative law judges. The FCC raised the possibility of encouraging complainants to include a draft order ''to show cause to initiate a revocation or cease and desist hearing proceeding.'' The FCC said it also wants to hear how it can better use the services of the Amateur Auxiliary in beefing up enforcement.

The FCC proposed to phase out Radio Amateur Civil Emergency Service, or RACES, stations by not renewing their licenses. No new RACES licenses have been issued since 1980, and only 249 valid licenses remain. The FCC said RACES stations no longer are needed because any amateur station that has been properly registered with a civil defense organization has the same privileges as a RACES station.

The FCC also took the occasion to clarify the definition of ''power'' as used in the RF exposure table in Section 97.13(c)(1). The FCC said it refers to peak envelope power (PEP) input to the antenna. It also made clear that no one holding an FCC-issued ham ticket may apply for a reciprocal permit for alien amateur license.

The FCC set a longer-than-normal comment period. The deadline for comments is December 1, 1998. The deadline for reply comments is January 15, 1999. The FCC will accept electronic comments via the Internet at http://www.fcc.gov/e-file/ecfs.html." (ARRL)

I would encourage all amateurs to write the FCC in opposition to this new Proposal! The elimination of the 5-WPM could, in the long-run, be detrimental to our hobby, not helpful! To many new hams, 5-WPM is an attainable goal, but when you raise it to 13-WPM, many will feel that they will never be able to achieve that speed. This is a bad move from the FCC in my opinion.

The ARRL's Proposed Changes
==========
As we reported in the last issue of The RSCM Wire, the American Radio Relay League (ARRL) has its own changes in store for the amateur radio licensing structure. The ARRL submitted its proposal to the FCC in letter form only, and officials at the ARRL said that they would wait until the FCC had announced its changes, before the ARRL would formally submit a proposal for rulemaking.

The ARRL's proposal calls for the elimination of the Novice and Technician Plus class licenses, leaving the Technician, General, Advanced, and Extra. The Technician class license would be referred to as the Class D license, the General would be Class C, the Advanced Class B, and the Extra class would be Class A.

Also under the ARRL's proposal, the 20-WPM Morse code test would be eliminated, leaving the 5-WPM and 12-WPM tests. The 5-WPM would be the entry level test required for HF.

This proposal has caused some division amongst the amateur radio community, even in the ARRL Board of Directors. However, a majority of the Board voted in favor of the new proposal, and in the end, all of the Directors agreed that the ARRL was only seeking what was best for amateur radio, and they feel that this proposal will create new interest in the hobby.

For complete information on the ARRL's proposal, with any updates that they may issue, visit their web site at http://www.arrl.org/news/restructuring/. (W8MMQ)

Update: Band Threat Alerts!
==========
As we reported several weeks ago, the comment period on the Land Mobile Communications Council's (LMCC) request closed on July 15. The LMCC proposed the immediate reallocation of the 70-cm band from the federal government to the Private Mobile Radio Service (PMRS).

The FCC had extended the comment period because of a flood of comments received from the amateur radio community. Many amateurs across the country expressed their strong opposition to the FCC regarding this proposal, and we even gained the support of many large corporations and organizations, and the United States Navy. The Navy stated that it recognized amateur radio as a service for the public, and that this proposal was not in the best interests of all concerned.

We must now await a ruling on this matter from the FCC. There is no official word on when their decision will be announced, but some have said that it could come within the next couple of months. (W8MMQ)

World Amateur Radio Day Set
==========
The World Amateur Radio Day has been set for September 19. This special event marks the first two-way transoceanic Amateur Radio contact, which was held between 8AB in France, and 1XAM, in America. The contact was made on November 27, 1923. (W8MMQ)

What's Up On the Bands!
==========
Well, here it is ... our new section! We review over the many DX reports from the past week, and list a few of them here for you. And with the sunspot count rising, ten and six meters should start coming alive!

Over the past week or more, conditions have been quite favorable on six and ten meters. The six meter FM calling frequency, 52.525-MHz, has been quite active. From Central Michigan, contacts have been easily made with stations in North and South Dakota, Montana, Iowa, and to the south into Tennessee, Kentucky, Florida and Texas. Six and ten meter single side-band has also been crowded with activity lately. And it is only going to get better over the next year! Now is the time to purchase six or ten meter rigs, and get ready for the action!

Do you have a significant DX contact to report? Please email us at w8mmq@juno.com, and we will be sure to list your note here in this section.

This Weekend in Contesting
==========
For complete contesting information and rules, visit the ARRL Contest Calendar, on the web at http://www.arrl.org/contests/.

New Jersey QSO Party
The contest, sponsored by the Englewood Amateur Radio Association, will be held from 2000-Z on August 15 to 0700-Z August 16, and 1300-Z August 16 to 0200-Z August 17. Use both phone and cw modes.

North American QSO Party
Sponsored by the National Contest Journal, will run from 1800-Z August 15 to 0600-Z on August 16, phone mode only. Anyone participating in the contest must use 150 watts or less.

Amateur Radio Resource Site of the Week
==========
Each week we feature an amateur radio web site dedicated to providing technical information, news or resource information, or just basic amateur radio questions and answers.

This week, we feature The Repeater Builder's Technical Information Page, an excellent page for those who are building a repeater, thinking of building one, or working on your existing repeater. With all of the information crammed into this web page, it is a definite must!

This site includes tons of technical information, and links to other sites with mod files, technical reference notes, and links to manufacturers of repeater equipment.

You can access the web site at http://www.kuggie.com/rbtip/, and let them know you found their site from our newsletter!

IN CLOSING
==========
Thank you for reading this edition of The RSCM Wire. Please feel free to copy it and pass it along to others. This newsletter is also available via electronic mail. Simply email us at w8mmq@juno.com, and ask to be placed on our mailing list. The electronic version contains material that might not have made it into our printed edition.

We are in the process of establishing another web site for this newsletter. This web site will be hosted on QSL.NET, and we will distribute the url once the site has been completed.

ANNOUNCING A NEW, MUCH NEEDED HAM RADIO NEWS GROUP!

14313.FREAK.SHOW

A new home for the

Porkbutt/Herbie/Doc/Lib Net/Stumpped Jumpers
Mutual Admiration Society!

Now all those zany cranks, crack pots, neo-Nazis,
radical Zionists, Klu Kluxers, felons, frauds and
assorted groupies, gropies, hangers-on and
racists/religionist of every color and creed
have a place to call their very own!

Help make it possible to continue this entertaining
Jew/Catholic/Fat People/Kluxxer/Black/Nazi/etc.
baiting well into the 21st century!
People so alike and who obviously enjoy each
other's company so much should have a
gathering place.
After all... what's ham radio for, right?

Email your provider today and ask them to add:

14313.FREAK.SHOW

to your news server!

(this announcement brought to you by
Radio Smartasses Inc., a non-profit disorganization)

1171. WHO IS KC8JBO??

Randy,

With barely my ticket in hand I had a TR-3, a DX-40, a 2-NT. It
really is not that hard to learn to tune these rigs. You are making
it sound like a black art or something that takes months of experience.
I learned to tune mine with either or both help from the manual
and tips from BA enthusiasts in the NGs. It's just not that hard.

Of those rigs, however, the 2-NT is probably the most rugged and
easy to tune. Those can be had, by the original poster, for around
$100 +/- and add a Heathkit VFO for around $50-75 and a 2-C receiver
for another $100 and he'd have quite a nice starter rig, a poor
man's C-line, for about $300.

>73
>Harry Reed, AB7YF
>
>
==========

I'm a relatively new ham (Aug 1997). I started out as a Tech+, am now
general. Here is what I bought/built/traded for to get started:

USED
Kenwood TS-430s with all filters, hand-mike, FM-430 board
(this is a 160 - 10 meter solid state rig, about 14 years old.)
Kenwood PS-30 power supply
$660.00

USED
RadioShack HTX-202 (2meter handy-talkie)
RadioShack 30 watt amplifier for 2 meters
various accessories, battery packs, charger, speaker-mikes
$200.00

USED
450 ohm ladder line (150 feet)
$15.00

USED
MFJ Electronic Keyer
Bencher Iambic paddles
$75.00

USED
MFJ-941 300 watt antenna tuner (had burnt 12 position inductor switch)
$5.00

USED
generic 30 watt amp for 2 meters

$20.00

NEW
switch to repair tuner (MFJ replacement part)
$8.00
NEW
MFJ-939 W9INN balun
$40.00

NEW at RadioShack, hardware store or hamfest
coax cable
copper antenna wire
connectors
antenna insulators
various parts for several simple interfaces
fuses
capacitors
copper ground strap
8' ground rod
less than $200.00

My math brings that to $1,023.00

So with that, I have a complete base station, and also a
mobile/portable 2 meter station.

At my base station, I use a homebrew 134 foot center fed dipole, as described in the ARRL Handbook. Took about an hour to build and hang in the trees. I feed it with 69 feet of 450 ohm ladder line (be sure your feed line IS NOT equal to 1/4 wave of any operating frequency.). The ladder line connects to the balun. From the balun I use 10 feet of coax to the tuner. This antenna is up 50 feet in the oak trees. I can easily tune all HF bands, anywhere on the band.

For base 2 meters, I use a homebrew 3 element Yagi. I built a "TINY 3" using the plans at:
http://www.qth.com/antenna/tiny3.htm
It is a 3 element Yagi, that has 6.5 db gain, and is also a direct connect. I started out with it at 10 feet above the ground, worked every repeater within 150 miles with 30 watts. Construction time was about an hour.

I have built a couple of interfaces to utilize FREE ham software for digital modes, such as RTTY, CW, PACKET. (I do not count my PC as part of my ham investment, because I already had it)

I use the 2 meter HT in both the base station and in the truck, with an external antenna. Also have a 30 watt amp in the truck now, and run it and the HT from the power jacks (lighters) in the truck.

Just recently bought a used dual bander for the truck, so my HT is my base 2meter rig.

Works like a charm, I am happy.

I think I'll fax a copy of their anti-semeticism to the Simon Wiesenthal
Center, or the Jewish Anti-Defimation League. I wonder how they will be
received.
Their religios zelots always try to subjugate those who are different. The same
Bible from which one can pluck (out of context) passages condemning
homosexuality contains other passages that approve the subjugate women, the
enslavement of blacks, and the exclusion of Jews from Heaven. Mainstream
Western sopciety has rightly abandoned mean spiritedness in favor of the
Christian message of love and equality before God. Let God, not man, judge
those who walk a different path.

That is true, from what I have studied, Hitler regarded the United States as a "mongrel" country, because of the racial diversity. See, they are making the same mistakes, assuming people with a name like Wiseman, is automatically Jewish. I have researched it genologically, and the British Isles is where my ancestors hail from. Many people died needlessly because trheir name was similar to what the Nazis thought were "Jewish names." Those that fail to learn the lessons of history, are condemned to repeat them.

Not to haunt, to learn. However, there is one element I would like to see out
of here, and I think you know where I stand on who I am talking about. I _am_ a
ham, albeit only for 7-8 months. However, I've been interested in radio since
1965.
I subscribe to the antenna group as well, which is very interesting. Although,
I haven't got HF privledges yet, I enjoy DX.

>they require retweaking every time you change frequency a little bit.
>

I have to disagree strongly. The older Kenwoods (TS-520,530,820,830) are
excellent rigs and would be great beginner rigs. If you had the intelligence to pass you
novice or tech-plus exams, you can easily master "the art of dipping
and tuning" tube finals -- especially if the finals are 6146s like in the
Kenwoods. Also, you don't have to tweak if you change frequency a "little bit" (of course,
an undefined amount here).

Don't stay away from those older rigs -- there great.

Gary, I'm an Instrument rated pilot and an Extra Class ham radio
operator. Having actually done both of these things, allow me to put
forth my perspective on this:

The instrument rating exams (one written, one check-ride) are
extremely practical in nature. If you don't know how to do the things
in these exams you could easily kill yourself and other bystanders.
The exam is a minimal set of skills you MUST have in order to fly an
aircraft safely. Other skills may be needed as well in certain
situations, but you're only required to know what those situations are
and obtain those skills before needing them.

On the other hand, ham radio licensing is comparatively irrelevant,
particularly the morse requirement. Whereas your life depends on your
being able to fly according to Instrument rules, no such demonstrable
requirement exists that folks need to know morse. Not even emergency
communications...

Frankly, I think you're comparing apples and oranges here.

Harry OM,

I highly recommend the TS820 or TS820S. They are easy to use, rugged
and reliable, have pi-net output (can match anything within reason on
coax feed), cover 160-10M plus a spare band position, can be modifed for
WARC bands if you find you really want them (I modified mine for 30M),
has BUILT IN power supply, has FSK built-in (For AMTOR, PACTOR, RTTY),
is REPAIRABLE if needed, and automatically selects the narrow CW filter
for FSK receive, something the TS430, TS440, TS530 cannot do (they all
have no FSK, the button labeled 'FSK' on the TS430S notwithstanding).
The tuning of an output pi-network is a trivial process you will learn
in about a minute or so of practice. You can find them for $400 and it
will be worth about that whenever (IF) you want to sell it in years
hence. I have been using mine for CW and FSK daily for 19 years now,
and I would not part with it.

'Nuff said?

Radio Shack used to sell an audio device that one could
connect to a receiver. The unit was a box with a DSP chip in it
programmed to act as a notch filter among other things. I recently
was going to buy one and found, according to aper son at our local
store, that this particular device has been discontinued. Does
anybody still sell something like this at a reasonable price?

Martin McCormick WB5AGZ
audio to remove tones such as paging tones, etc?

Qualified, Certified, Licensed. Lets just be sure that were not overdoing what is really necessary in the amateur service. Part 97 doesn't say anything about maximum seating capacity. Airplanes do fall from the sky. Hams usually don't.

Hi, Adam -
I also am a relatively new ham. While I've managed to get my Extra ticket, I'm still rather poor at CW. I passed the 20 wpm test, but am comfortable at 15-18 wpm. Like you, I find the on-air code to be pretty aweful. People don't separate their characters, or they use bizarre rhythms or they 'lose' too many letters while they're sending. There are a lot of ops who run their qso's at 30 wpm and more, and not that many in the speed range I need for practice. Still, I listen a lot, which has two benefits. First, I'm improving my 'ear copy' skills, and second, I pick and choose whose CQ to answer. I don't bother answering someone who can't even send their own callsign cleanly. After I'm steadier on my feet (ear?) I'll try them, maybe. I'll also answer a fair number of CQ calls from slower ops, just for fun. I'd be glad to make a sked with you. I can stand all the practice I can get, too. I'm not in a cool DX location, like someone else who offered to help you <grin>, but I'd be easier to reach on the average night.
